1. About this manual

Express Autocare ERP is the one system the whole workshop works in: from the first enquiry of a customer, through booking, the job card, parts, billing and delivery, to the reminder for the next service. Attendance, salaries and the accounts are in the same system, so nobody has to type the same thing twice.

This manual explains every screen in plain words, with pictures. You do not need to read all of it. Find your role in the table below and read those chapters first.

Which chapters should I read?

Your role	What you mainly do	Read chapters
Everyone	Sign in, My Day, attendance, leave, payslips	2, 3
Marketing executive	Call leads, send prices and creatives, book slots	2, 3, 4 (4.7), 5
Service advisor / Body shop advisor	Bookings, job cards, estimates, technicians, parts, delivery	2–9, 4.7, 13, 14
Technician / Body shop technician	Job sheets: activities, photos, parts needed	2, 3, 6.6
Driver / home-service technician	Pickups, drops, home visits	2, 3 (3.4), 7
Spare parts coordinator	Supplier prices, orders, receiving parts	2, 3, 8
Back office executive	Bills, payments, expenses, payroll	2, 3, 9 (9.5), 10, 11, 13
Manager / Body shop manager	Everything in the branch; approvals, attendance, QC	All, especially 11, 12, 13, 14
Owner	Dashboard, reports, accounts, settings	All
Customers (for staff who help them)	The customer app: sign-in, approvals, UPI payment, booking, documents, the assistant	13, 14 (fleet owners and their drivers)

Words used in this manual

Word	Meaning
Lead	A person who has shown interest (ad, call, referral, walk-in) but has not yet brought the car.
Follow-up	The next time we should call or message a lead.
Booking / slot	An appointment for a day and time. Each time slot can take a fixed number of cars.

Word	Meaning
Journey / creative	An automatic series of WhatsApp messages (creatives = the pictures, videos or texts) sent over days or weeks.
Job card	The record of one car visit: customer, car, work, technicians, parts, bill.
Job sheet	The technician's checklist of activities for the job, with photos and videos.
Estimate	The price list for the job that the customer approves (or declines) line by line on WhatsApp.
Proforma / tax invoice	The proforma is the draft bill; the tax invoice is the final GST bill.
Gate pass	Permission for the car to leave. It is issued by itself when the bill is fully paid.
GRN	Goods Received Note: the record of parts received from a supplier (only if Purchases is switched on).
Customer credit	Extra money the customer paid (or a referral reward) kept for a later job.
Staff-held money	Customer money paid into an employee's own UPI or given to them in cash, until it is handed over.
Advance	Salary paid early to an employee, recovered from later salaries.
OT	Overtime. It counts only after the first hour beyond the shift.
Live location	The phone's position, shared from punch in to punch out. The owner and managers see it on the Live Staff Map.
Customer app	The Express Autocare app for customers at <address>/app (also an Android app). It shows their jobs, bills, cars, bookings and documents.
UPI reference (UTR)	The 12-digit transaction number in the customer's UPI app. The customer sends it after paying; back office checks it in the bank.
Interakt	The WhatsApp Business API service. When switched on, approved message templates are sent by the system without anyone tapping Send.
AI assistant	The customer app's helper (Claude). It answers from your own price lists; it suggests, it never quotes or diagnoses.
Public address	The web address the system is reached at, e.g. https://erp.expressautocare.in. Every link sent to customers uses it.

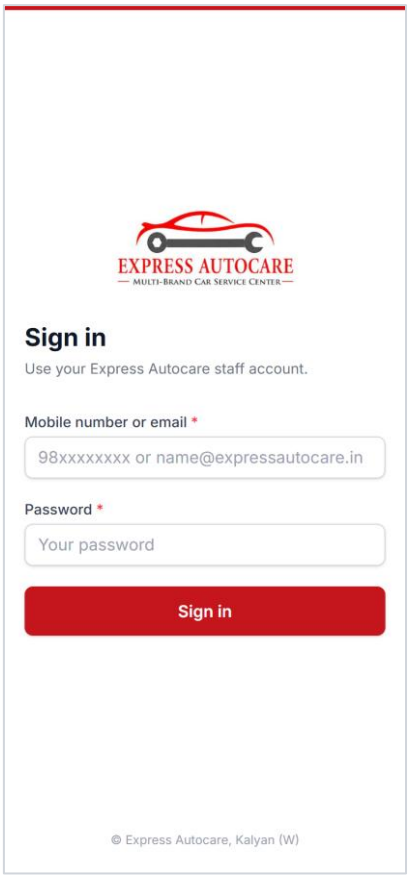

Note The pictures in this manual were taken from a practice copy of the system filled with sample data (for example "Rahul Mehta" or "Andheri Branch"). Your screens will show your own customers and numbers. What you see also depends on your role: people only see the menus they need.

2. Getting started

2.1 Signing in

The ERP works on any phone or computer with a web browser (Chrome is best). There is nothing to download.

1. Open the ERP link given by your manager.
2. Type your **mobile number** (or your office email, e.g. name@expressautocare.in) and your **password**.
3. Tap **Sign in**.

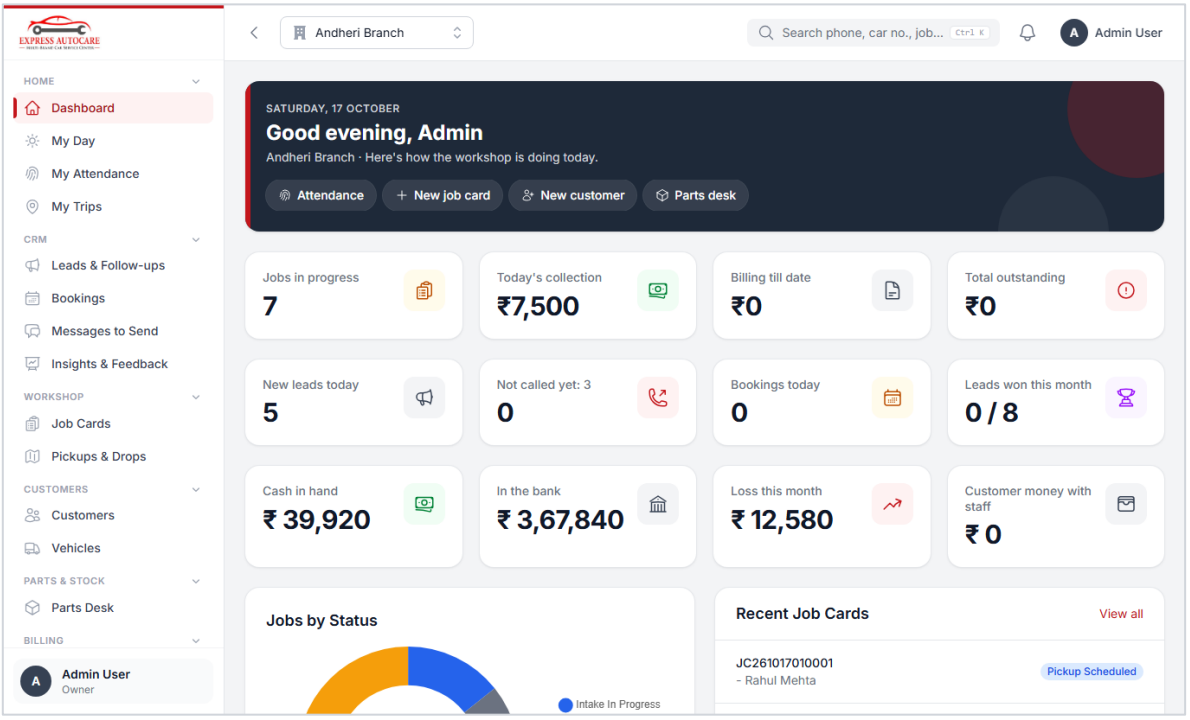

The sign-in screen

> **Tip** On a phone, open the browser menu (⋮) and tap **Add to Home screen**. The ERP then opens like an app from its own icon.

Forgot your password? Ask the owner or manager. They reset it in *Settings › Users*. Never share your password: everything you do is recorded under your name.

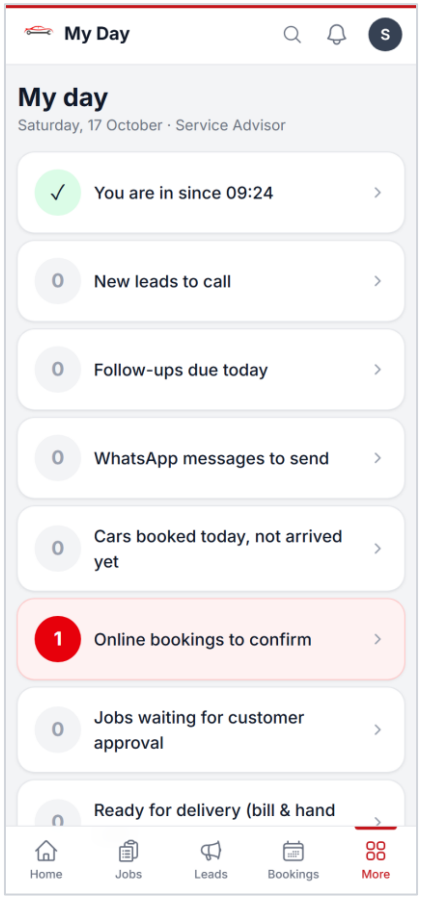

2.2 The screen at a glance

On a **computer**, the menu is on the left, grouped by module: Home, CRM, Workshop, Customers, Parts & Stock, Billing, Accounts, People and Settings. Tap a group name to fold or open it. At the top you will find the branch name, the search box, the bell and your name.

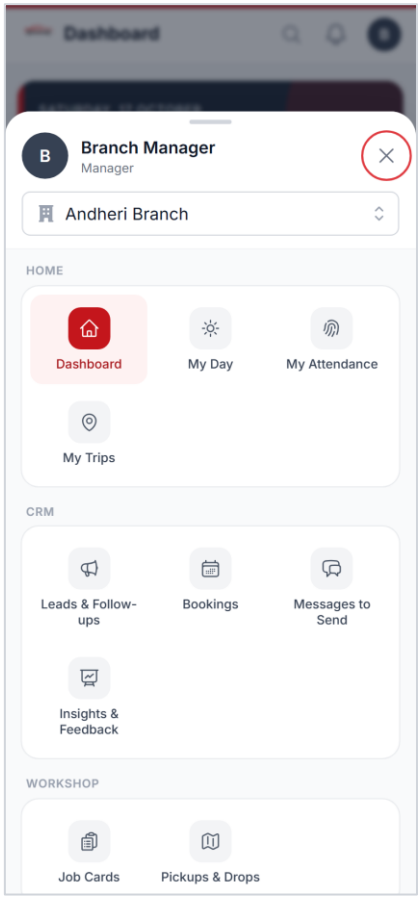

The owner's dashboard on a computer: jobs in progress, today's collection, billing and outstanding money

On a **phone**, the four screens you use most are on the **bottom bar**. Everything else is under **More** (bottom right).

My Day with the bottom bar

The full menu under More

2.3 My Day — start here every morning

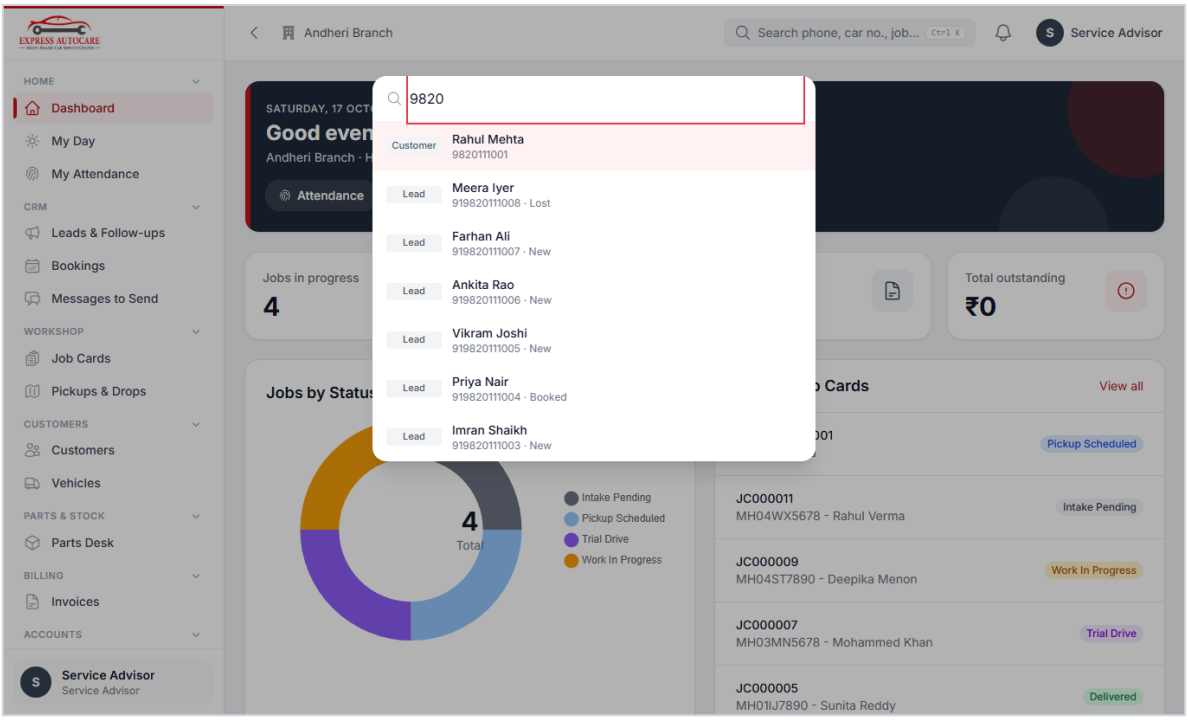

My Day is your to-do list. It only shows what is waiting for **you**, for example:

- whether you have punched in today;
- new leads to call and follow-ups due;
- WhatsApp messages waiting to be sent;
- cars booked today that have not arrived, and online bookings to confirm;
- jobs waiting for customer approval, jobs ready for delivery, bills to make;
- leave requests to approve (managers).

A red card means something is waiting. Tap the card to go straight to the work. When every card shows 0, you are up to date.

2.4 Search anything

Tap the **magnifier** at the top (or press **Ctrl + K** on a computer). Type a few digits of a phone number, a car number, a job card, bill or booking number, or a name. The results show customers, cars, jobs, bills and leads together. Tap one to open it.

Searching "9820" finds customers, leads and bookings with that number

2.5 The bell (alerts)

The **bell** shows alerts meant for you: a new lead given to you, a job assigned to you, parts arrived, an estimate approved, your leave answered, and so on. A red number shows how many are unread. Tap an alert to open the record.

2.6 Branches

If you work at more than one branch, choose the branch at the top of the screen. Lists, bookings and reports then show that branch. The owner can see all branches.

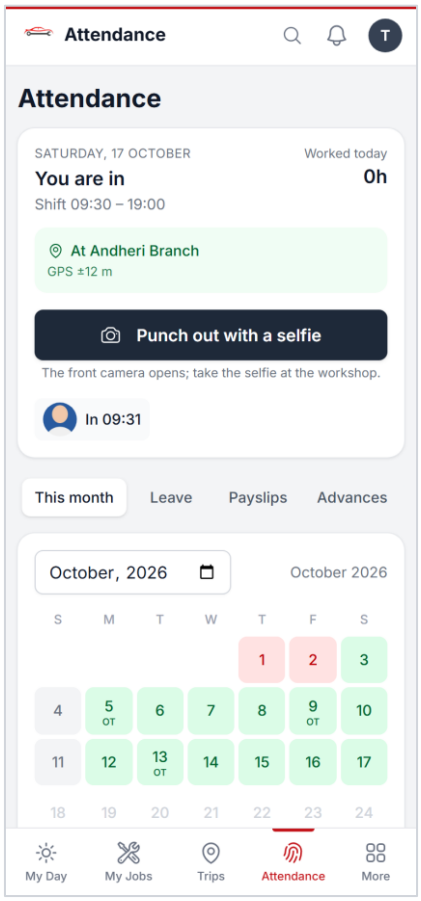

> **Tip** If a menu item you need is missing, either your role does not use it, or the owner has switched that module off (Settings › Modules). Ask your manager.

3. Attendance, leave and payslips (everyone)

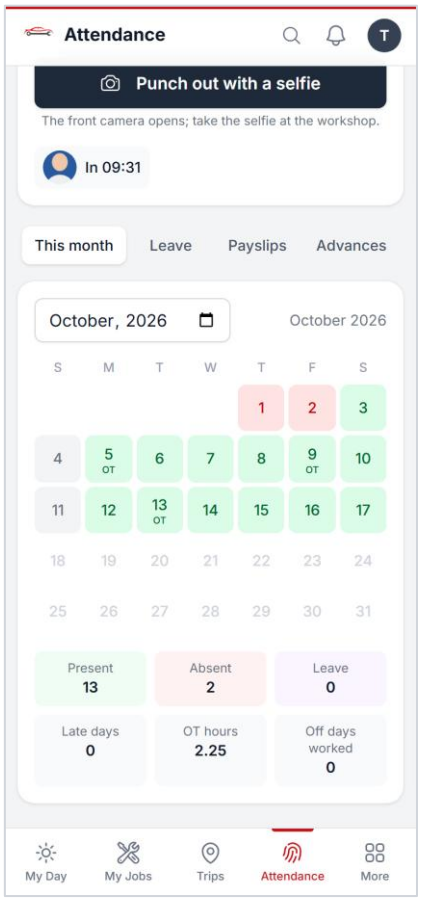

Every employee marks attendance with a **selfie** taken **at the workshop**. The phone's location (GPS) proves you were there. Your attendance, overtime and leave are then counted for your salary automatically.

3.1 Punch in and punch out

1. Reach the workshop and turn on **Location** on your phone.
2. Open **People › My Attendance** (on the phone: **Attendance** in the bottom bar).
3. Tap **Punch in with a selfie**. Allow the camera and location when the phone asks (only the first time).
4. Look at the front camera and take the selfie. Wait for the green tick.
5. When you leave for the day, open the same screen and tap **Punch out**.

Punching in with a selfie

Your month: present, late, overtime

> **Careful** The button only works **inside the workshop area** (for example within 150 metres). If it says you are too far away, move inside, wait a few seconds for the GPS, and try again. Drivers and home-service technicians on a trip that day can punch from where they are.

Forgot to punch, or the phone did not work? Tell your manager the same day. The manager adds the missing punch with a reason. You cannot change punches yourself.

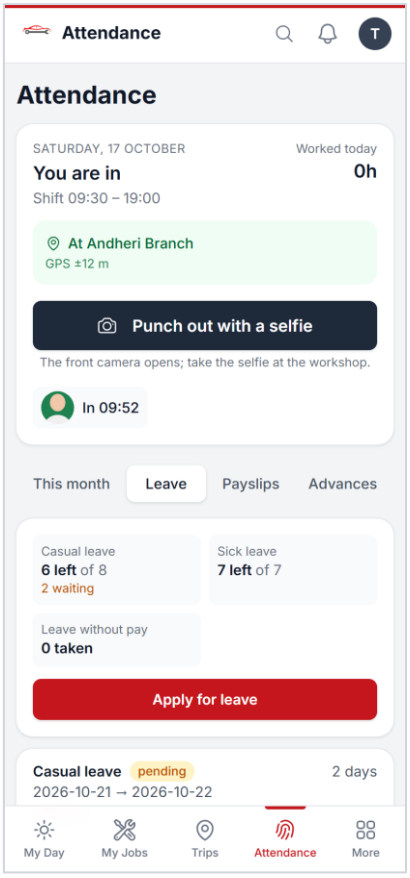

Your month

Below the punch button is a calendar for the month. Colours: **green** present, **red** absent, **purple** leave, **grey** weekly off or holiday. Tap a day to see your in and out times, late minutes and overtime.

> **Note** Overtime starts only after the **first hour** beyond your shift. Working on your weekly off or a holiday earns the extra pay set by the owner.

3.2 Applying for leave

1. Open **My Attendance** and tap the **Leave** tab.
2. Tap **Apply for leave**.
3. Choose the leave type, the dates (or a half day) and write the reason.
4. Tap **Send**. Your manager gets an alert.
5. You get an alert back when it is approved or rejected. The tab also shows your balance of each leave type.

The Leave tab with balances and requests

Paid leave beyond your balance is taken as **unpaid** (it is cut from the salary).

3.3 Payslips, advances and money you hold

- **Payslips** tab: appears after the owner finalises the month's payroll. Tap a month to see every line, or open the PDF.

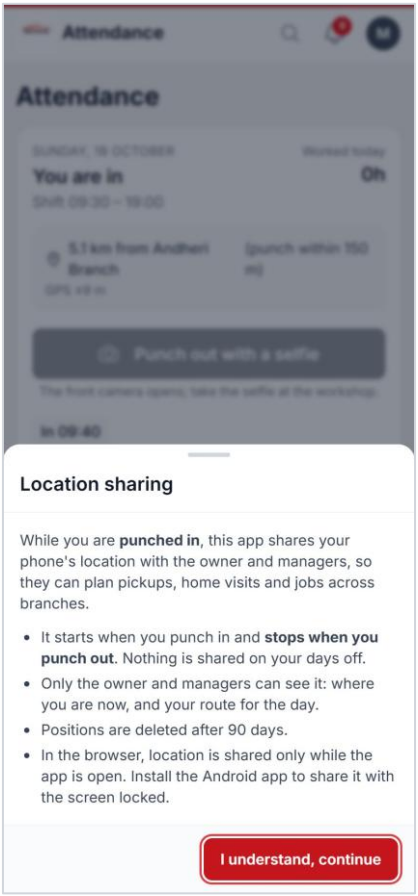

- **Advances** tab: salary advances still being recovered and how much is cut each month.
- **Customer money you hold**: if a customer paid **you** (your own UPI or cash), it shows here until you hand it over at the counter. Anything still with you at month end is cut from your salary.

Connects to Payroll (days, overtime and leave are counted from here) and CRM (new leads are not given to people who are absent or on leave).

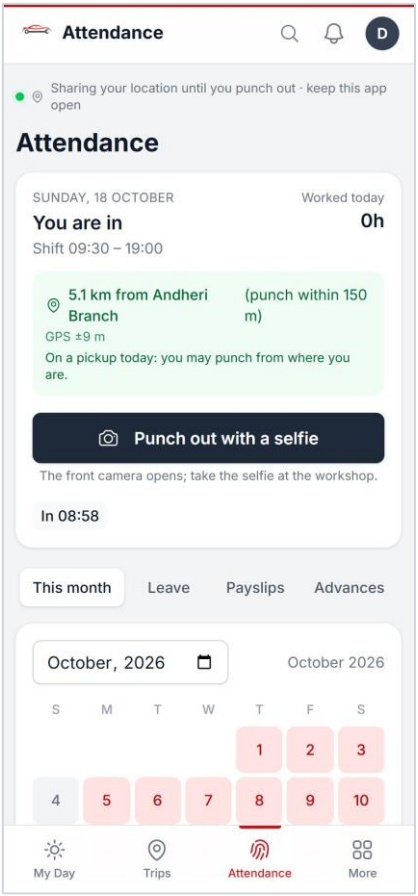

3.4 Location sharing while you are punched in

From the moment you punch in until you punch out, the app shares your phone's location with the owner and managers. It helps them plan pickups, home visits and jobs across branches, and see who is nearest when a customer calls.

1. The first time you punch in, a short notice explains what is shared. Read it and tap **I understand, continue**.
2. Allow **Location** when the phone asks. In the Android app choose **While using the app**, and allow **Notifications** too.
3. A small green line at the top of every screen says **Sharing your location until you punch out**. You do not need to do anything else.
4. When you **punch out**, sharing stops. Nothing is shared after that, or on your days off.

The one-time notice

Sharing on: the green line at the top

> **Careful** A **red line** means your location is off or blocked. Turn on Location (GPS) on the phone, or allow it for the app in the phone settings. Until then the map shows you as "No signal".

> **Tip** In the browser, location is sent only while the app is open on the screen. If you are in the field (drivers, home technicians, managers visiting branches), install the **EA Workshop Android app** (section 7.3): it keeps sharing with the screen locked.

Who sees it? Only the owner and managers, on People › Live Staff Map (section 11.6). Positions are deleted after 90 days. Your manager can switch sharing off for you if your work never leaves the workshop.

4. CRM: leads and follow-ups

The CRM keeps every enquiry until it becomes a booking, and keeps in touch with customers after delivery so they come back. It is used by **marketing executives** and **service advisors**; managers watch it.

4.1 Where leads come from

- **Meta (Facebook / Instagram) and Google ads, and the website**: the lead arrives by itself, with the campaign name.
- **Incoming calls, walk-ins and referrals**: you add them with **Add lead** (below).
- **Existing customers**: the system makes a lead by itself when a car is due for service, insurance is due, work was left pending, or the customer has not visited for months.
- **WhatsApp chats** (when Interakt is on): someone new who writes to the workshop on WhatsApp becomes a lead by itself, with what they wrote. A chat that starts with a campaign's ready-made text (Click-to-WhatsApp ads) becomes that campaign's lead (4.7).

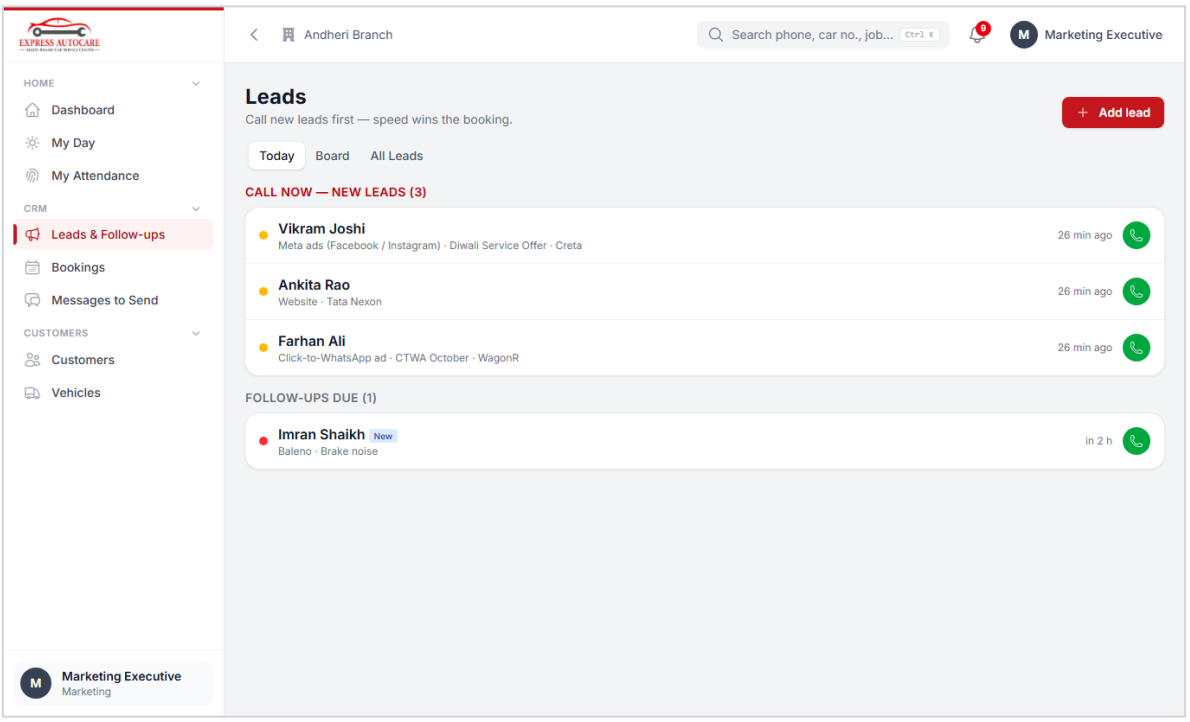

Each new lead is given to the next executive in turn (round-robin). People who are absent or on leave today are skipped. You get a bell alert.

> **Note** If the same mobile number already has an open lead, the system does **not** make a second one. It adds "enquired again" to the existing lead and marks it hot.

4.2 Your list for today

Open **CRM › Leads & Follow-ups**. The **Today** tab has two parts:

- **Call now — new leads**: people who have not been called yet. Call them **within 15 minutes**: the faster you call, the more bookings you get. If you don't, you get a reminder, and then your manager is told.
- **Follow-ups due**: leads whose next call is due now. A **red dot** means hot, yellow warm, grey cold. Overdue ones show in red.

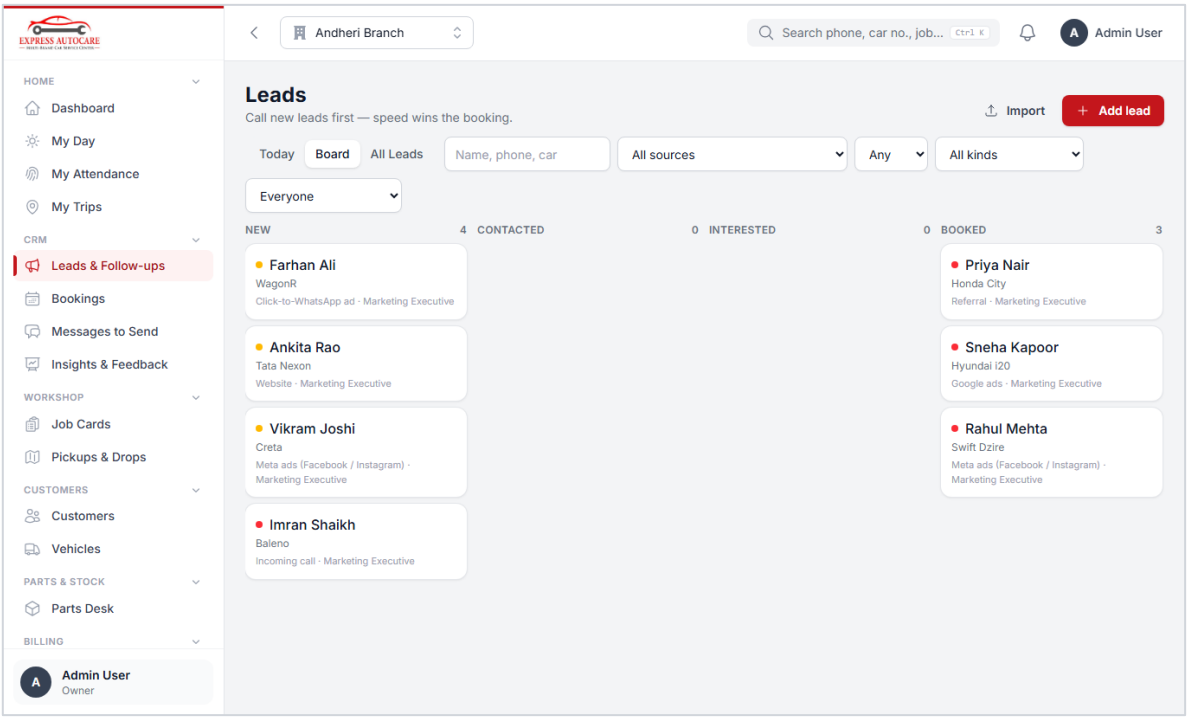

Leads › Today: new leads to call first, then follow-ups due

Tap the green phone button to call straight away, or tap the name to open the lead.

The Board and All Leads

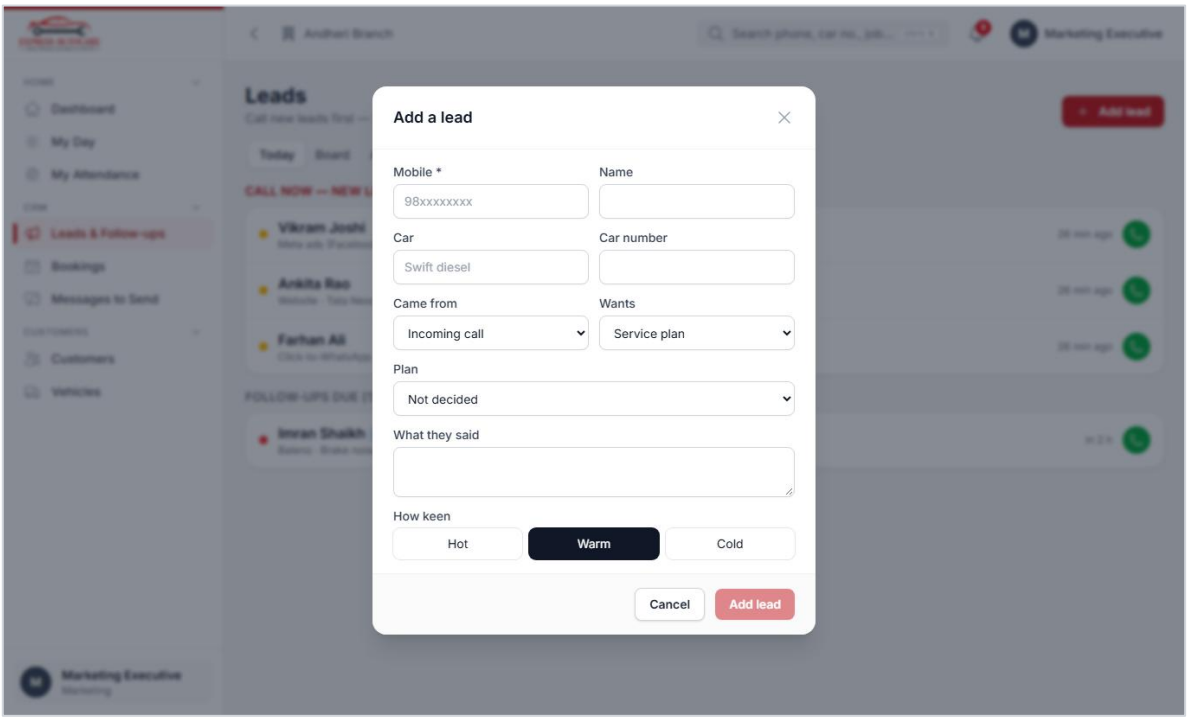

Board shows all open leads in columns: New, Contacted, Interested, Booked. Use the filters at the top (source, temperature, kind, executive) to narrow the list. **All Leads** is the same as a list, with search. Managers can choose **Everyone** to see the whole team's leads.

The Board: every open lead by stage

4.3 Adding a lead (calls, walk-ins, referrals)

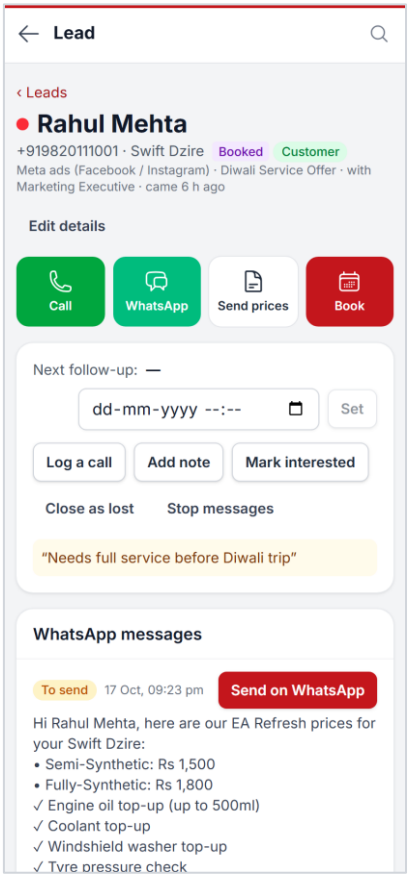

1. Tap **Add lead**.
2. Type the **mobile number** (this is the only thing you must fill).
3. Add the name, car and car number if you know them.
4. In **Came from**, choose how they reached us (incoming call, walk-in, referral…). In **Wants**, choose what they want (service plan, AC, body shop…) and the plan if known.
5. Write **What they said** in a few words, and choose **How keen** (hot, warm or cold).
6. Tap **Add lead**.

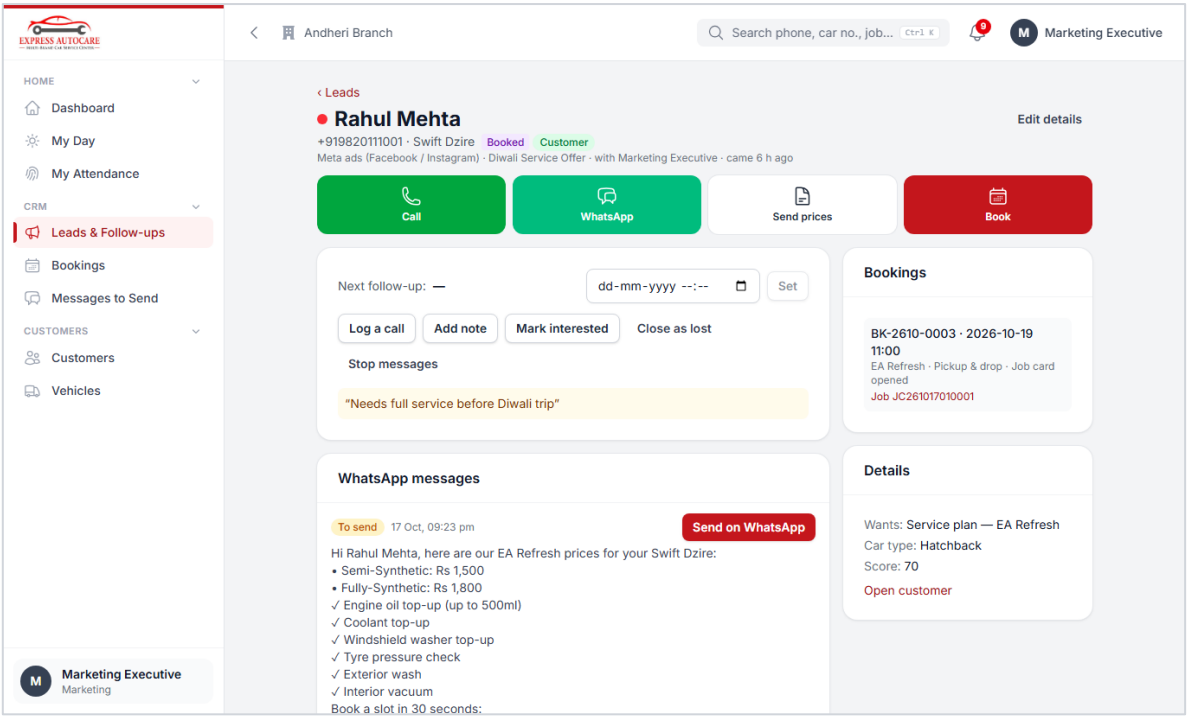

Add a lead: only the mobile number is required

4.4 Working on a lead

Open a lead to see everything about it: where it came from, who it is with, what they said, every call and message, and the next follow-up. The four big buttons do the main jobs.

A lead on the phone

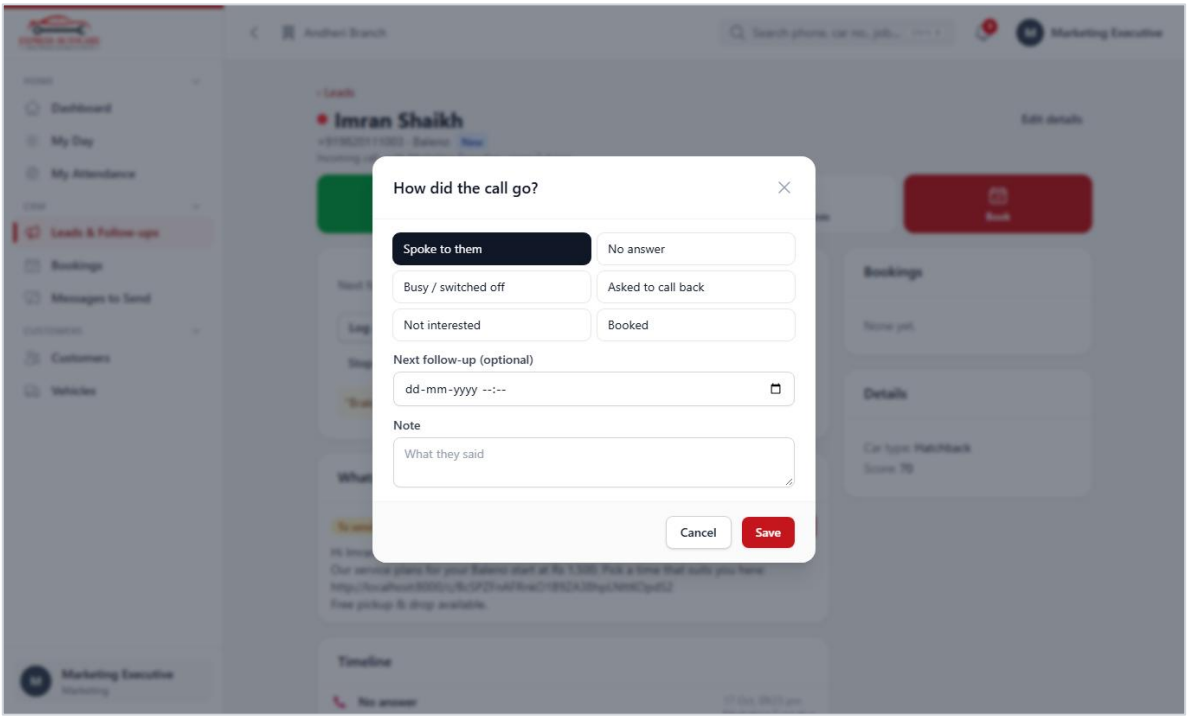

The same lead on a computer, with its timeline

Button	What it does
Call	Dials the customer. After the call, tell the system what happened (see Log a call).
WhatsApp	Opens a WhatsApp chat with the customer.
Send prices	Pick a plan. The message with the prices for their car type, what is included, and a booking link is made for you. Tap **Send on WhatsApp**.
Book	Books a slot (see 4.5).
Log a call	Records what happened on a call and sets the next follow-up by itself.
Add note	Anything worth remembering.
Mark interested	Moves the lead to Interested.
Close as lost	Needs a reason. "Not now" reasons keep sending a gentle message every few weeks.
Stop messages	Use it when the person asks us not to message them. No automatic messages go to them again.

Log a call

After every call, tap **Log a call** and choose what happened:

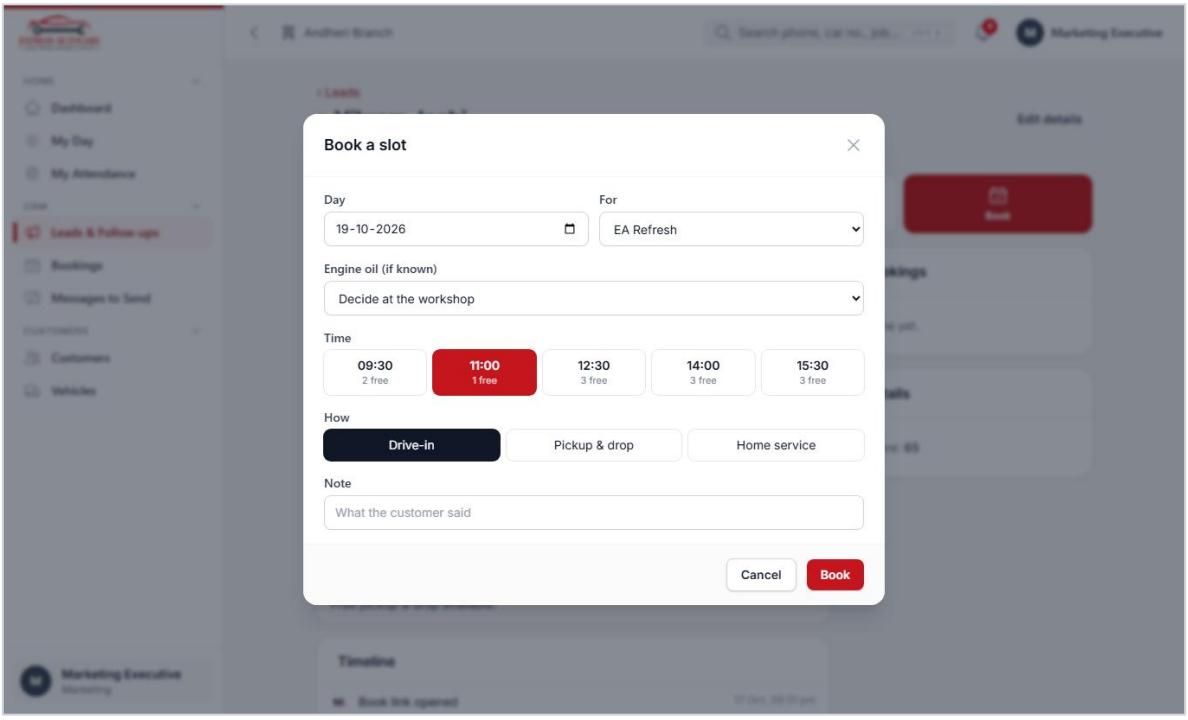

- **Connected**: write what they said and, if needed, when to call back.
- **No answer**: the system sets the next try for you: in 2 hours, then tomorrow, then in 3 days. After three tries the lead becomes *unreachable* and goes into the automatic messages.
- **Call back at…**: pick the date and time they asked for.
- **Not interested**: choose the reason.

Logging a call: the next follow-up is set by itself

4.5 Booking a slot

1. On the lead (or a customer page), tap **Book**.
2. The first day with free slots is already chosen. Change the **Day** if the customer wants another one.
3. Choose what the booking is **For**: a service plan or a repair (AC, body shop, electrical, detailing…).
4. Tap a free **time**. Full times are greyed out; each shows how many places are left.
5. Choose **How**: **Drive-in**, **Pickup & drop** or **Home service**. For pickup and home, type the address and landmark.
6. Add a note if needed and tap **Book**. A confirmation message is ready to send to the customer.

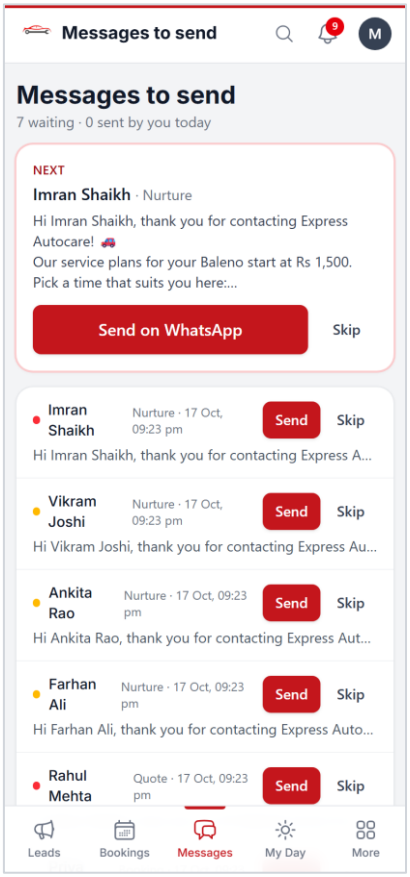

Booking a slot: day, what for, time and how

> **Tip** Customers can also book **by themselves** from the link in the prices message. Those bookings appear as *To confirm* (see 5.1).

4.6 Messages to send

For now, WhatsApp messages are sent by you with one tap (later, an automatic WhatsApp service can send them without anyone tapping). Every message the system prepares waits in **CRM › Messages to send**: quotes, booking confirmations, follow-up creatives, thank-you and feedback messages, reminders.

1. Open **Messages to send**. The **Next** message is shown at the top.
2. Tap **Send on WhatsApp**. WhatsApp opens with the message already typed.
3. Press send in WhatsApp, then come back to the ERP.
4. The message is marked sent and the next one is ready. Tap **Skip** if a message should not go.

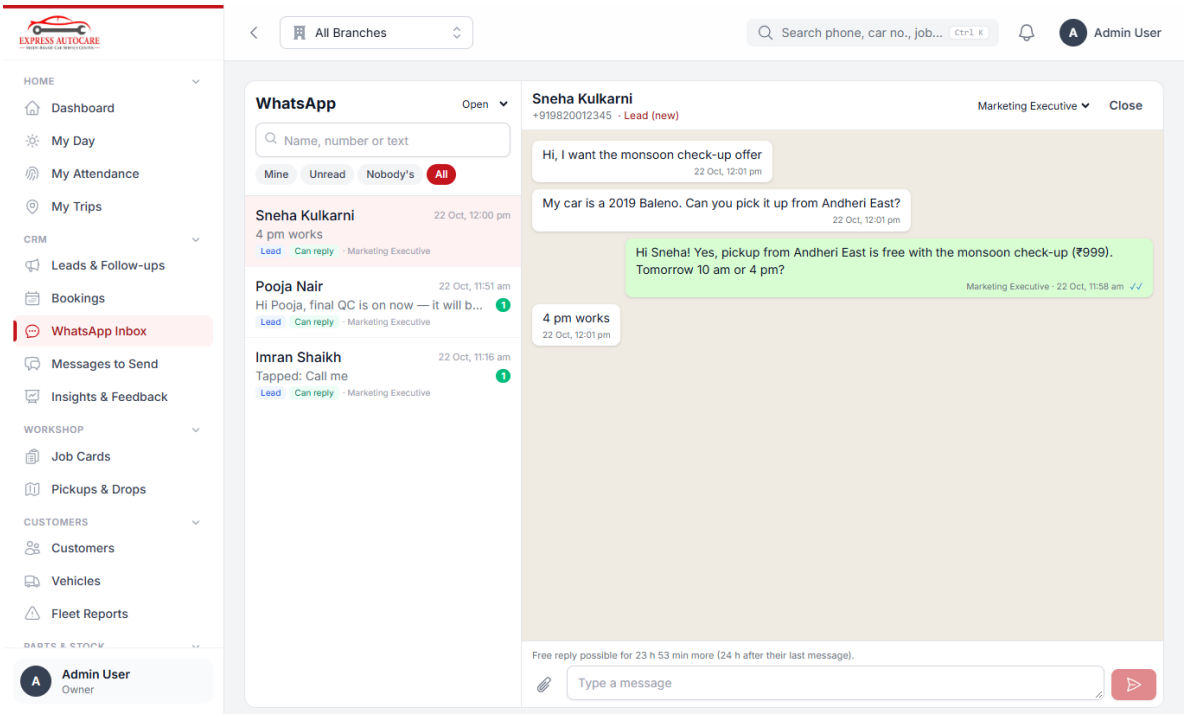

Messages to send: one tap per message

> **Note** A message with a picture, video or PDF carries a short link to it, because WhatsApp links cannot attach files. Messages are only prepared during working hours, and a person does not get more than one marketing message every few days.

4.7 WhatsApp inbox (when Interakt is on)

With Interakt switched on (12.6), customers' WhatsApp messages come into the ERP and you answer them from **CRM › WhatsApp Inbox**, on the computer or the phone. Everything about one number is one chat: what they wrote, what you replied, and the job and booking messages the system sent them.

CRM › WhatsApp Inbox: the chats on the left, one chat on the right

Which chats you see

- **Mine**: chats of your leads, of customers whose car is in the workshop with you as the advisor, and chats given to you.
- **Unread**: chats with new messages (green number). You also get a bell, at most every 15 minutes per chat.
- **Nobody's**: chats no one has taken yet. Open one and choose your name in **Give to…** to take it.
- **All** (managers and the owner): every chat. Managers can give a chat to anyone.

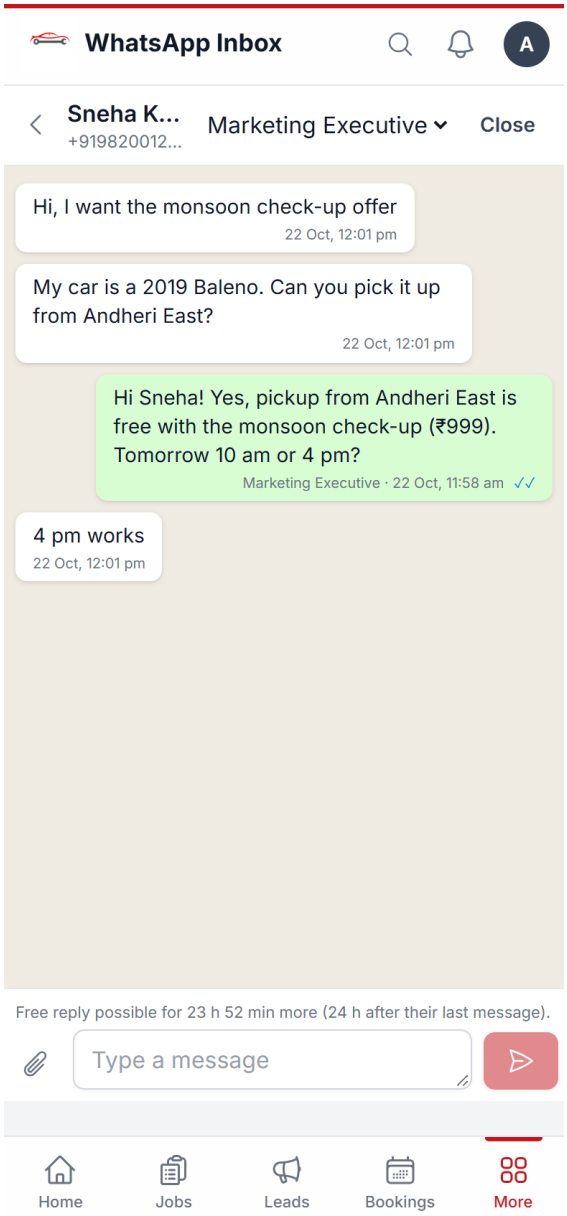

Who gets a new chat

- **Someone new** writes in: a lead is made by itself (source "WhatsApp chat"), with their first message as the requirement, and given to the next executive in turn like every lead. If the message starts with a campaign's **WhatsApp start text** (12.2), the lead is that campaign's.
- **A customer whose car is in the workshop**: the chat goes to that job's advisor. No lead is made.
- **A number with an open lead**: the message is added to the lead's timeline and the lead gets warmer.

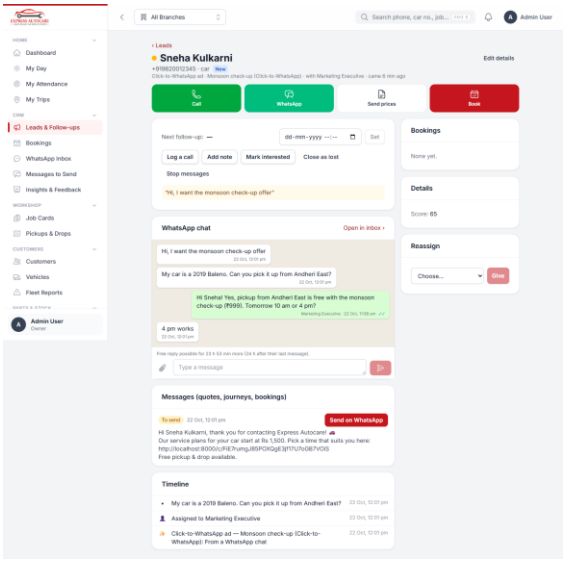

Replying

1. Open the chat. Read what they wrote; the top shows their lead, customer page and job, if any.
2. Type in the box at the bottom and press **Send** (Enter). Use the clip to send a photo, PDF, short video or voice note.
3. The ticks show what happened: ✓ sent, ✓✓ delivered, blue ✓✓ read, ⚠ not delivered (the reason shows under the message).

> **Note** WhatsApp allows free replies only for **24 hours after the customer's last message**. The box shows how long is left. After that you can only send an approved template (for example **Chat opener**: "Please reply so we can continue"); when they reply, the chat is open again for 24 hours.

The inbox on a phone

The same chat on the lead page

Buttons on our messages

Some messages (for example the plan prices) can carry buttons such as **Interested**, **Call me** and **Not now**. When the customer taps one, it shows in the chat and the lead moves by itself: **Interested** marks the lead interested with a follow-up today; **Call me** sets the follow-up to now and rings your bell; **Not now** moves the follow-up 30 days ahead. Which button does what is set by the owner (12.6).

Other things in a chat

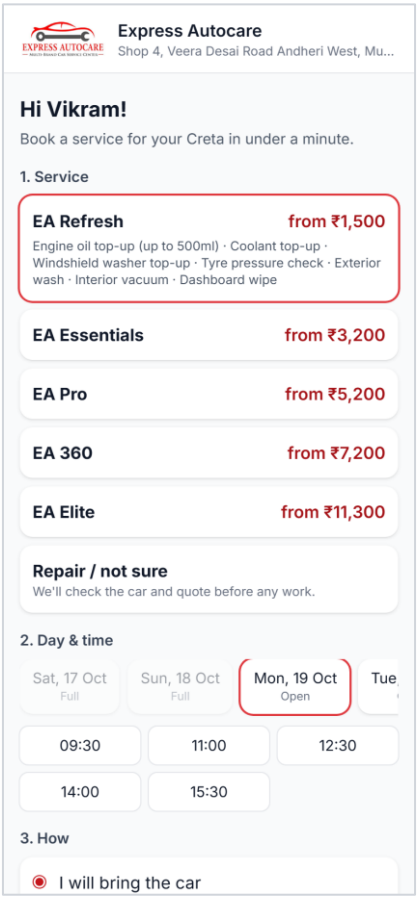

- **Make lead**: for a chat without a lead (for example a customer who now wants a quote).

- **Close** a chat when it is done (it opens again by itself when they write). **Reopen** brings it back.
- The **lead page** shows the same chat with a reply box (**Start one** sends a template first). A reply of **STOP** ends marketing messages to that number.

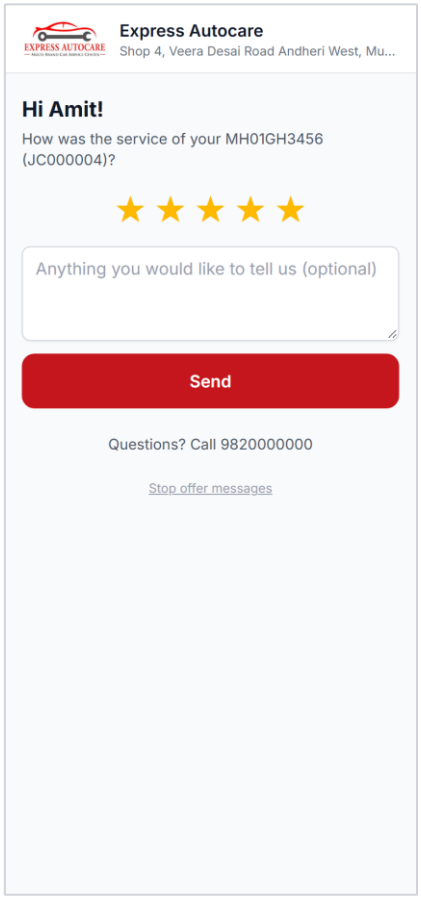

> **Tip** Answer new WhatsApp leads as fast as calls: the same 15-minute rule applies, and the customer is already on their phone.

4.8 What the customer sees

The links in our messages open simple pages on the customer's phone. They do not need to sign in.

Self-booking page: plan, price and free times

Rating page after delivery

After delivery the customer gets a thank-you with a one-tap rating. A rating of 4 or 5 asks them to review us on Google. A rating of 1 to 3 alerts the manager straight away, so we can call and fix it. The message also carries their personal **referral link**: when a friend books through it and the friend's car is delivered, the customer gets a reward as customer credit.

4.9 What happens by itself

When	What the system does
A new lead does not book	Sends the plan details at once, then reminders and creatives every 1–2 weeks (as set in the journeys).

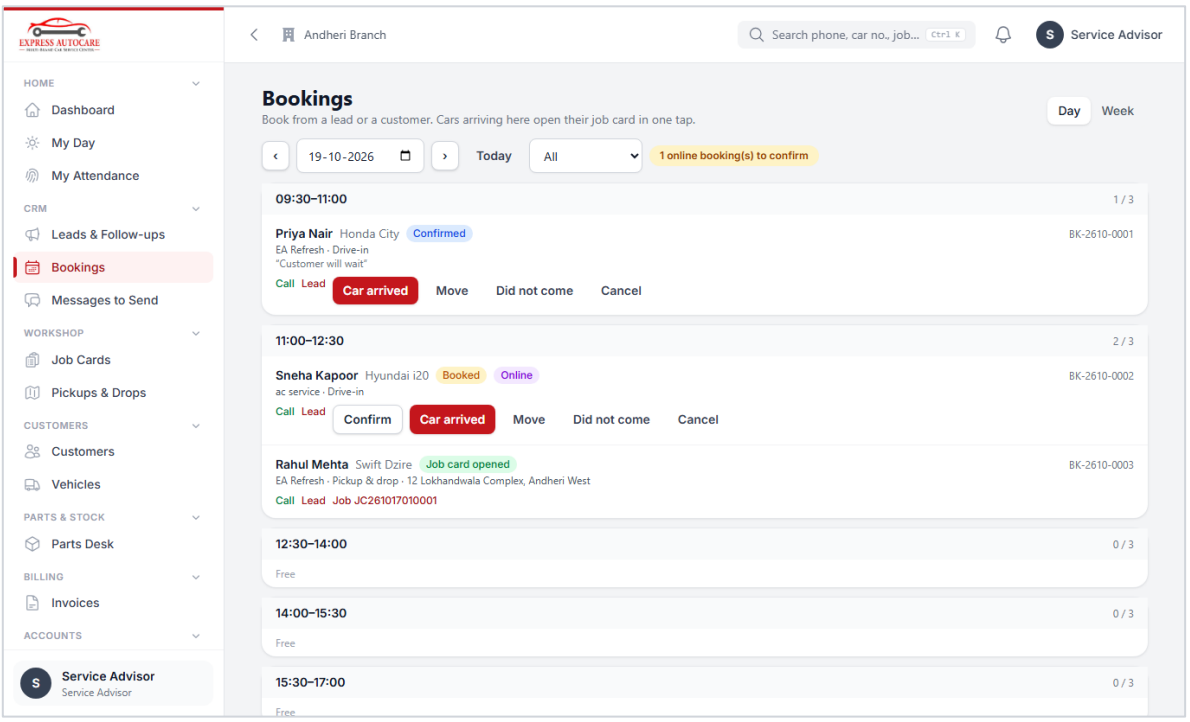

When	What the system does
A booking is made	Prepares the confirmation, a reminder the day before and a message on the day.
The customer does not come	Marks *Did not come* 3 hours after the slot and starts no-show messages.
The car is delivered	Marks the lead **won** with the bill amount; sends thank-you, rating and referral link.
Work was declined	About 2 weeks later, reminds the customer of the work still pending (a strong second sale).
Service is due	Reminds the customer before the due date, then makes a lead for a call.
Insurance is due	Reminds 30 and 7 days before expiry.
No visit for months	Starts win-back messages.

Connects to Bookings and job cards (a booking becomes a job card), Billing (the bill amount is credited to the lead and its campaign), Payroll (incentive per converted lead), Customers (everything shows on the customer page).

5. Bookings and CRM insights

5.1 The bookings board

CRM › Bookings shows who is coming on a day, slot by slot. Change the date at the top. Each booking shows the customer, the car, what it is for and how (drive-in, pickup or home).

Bookings for a day: confirm, mark arrived, move or cancel

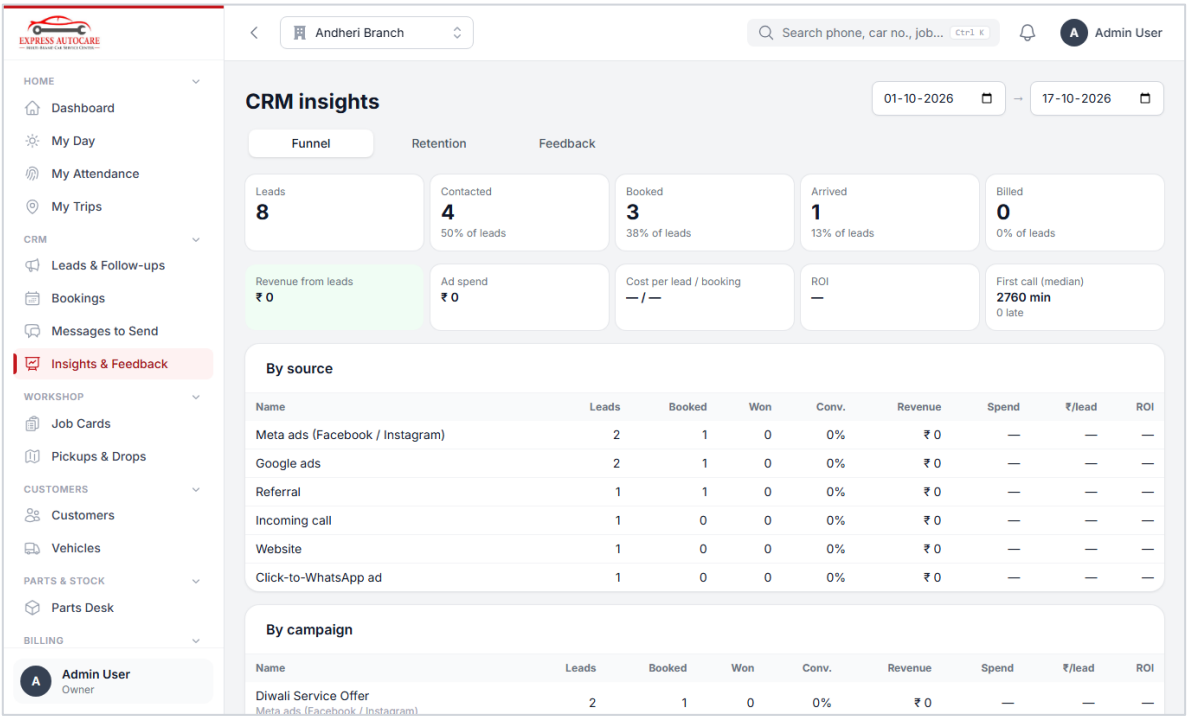

Button	When to use it
Confirm	For online bookings (*To confirm*): call the customer, then confirm. Pickup and home bookings open the job card and the driver's trip as soon as they are confirmed.
Car arrived	For drive-in bookings when the car reaches the workshop. Check the car number and car type: the **job card form opens already filled in** with the customer, car, plan and oil.
Move	The customer wants another day or time.
Cancel	The customer cancelled. Choose a reason.
Did not come	Also marked by itself 3 hours after the slot.

5.2 Insights and feedback (owner, managers)

CRM › Insights & Feedback shows how well leads turn into business, for any date range:

- **Funnel**: leads → contacted → booked → arrived → billed, with the percentage at each step.

- Revenue from leads, ad spend, **cost per lead / booking** and **ROI** (enter the monthly ad spend per campaign in Settings).
- How fast the first call is made, and how many were late.
- The same numbers **by source, by campaign and by executive**.
- **Retention** tab: services due this month and how many booked, repeat customers, referrals.
- **Feedback** tab: ratings and comments; unhappy customers first.

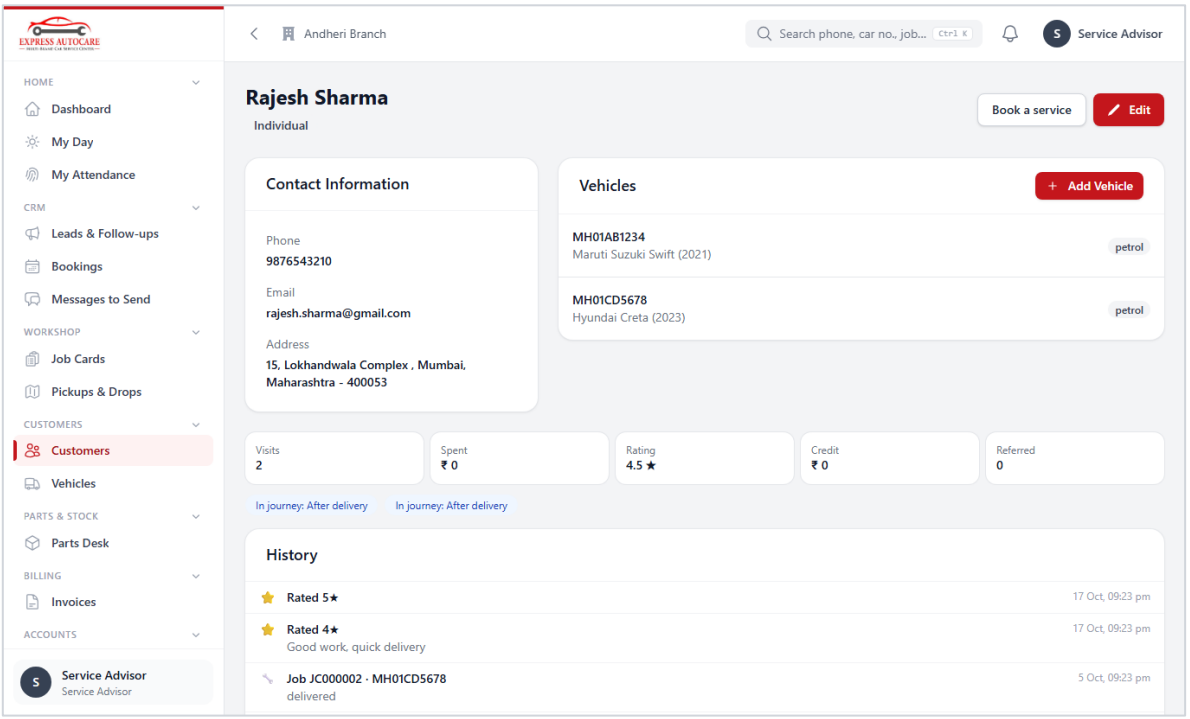

CRM insights: the funnel, by source and by campaign

6. Customers, job cards and the workshop floor

6.1 Customers and vehicles

1. Open **Customers › Customers** and tap **New** (or search first: the customer may already exist).
2. Type the name, mobile number and **How did they find us**.
3. Save, then tap **Add Vehicle**: car number, make and model, and the **car type** (hatchback, sedan, SUV…). The car type decides the plan prices.

The customer page shows the visits, total spent, average rating, customer credit, people referred and one **history** of everything: enquiries, bookings, jobs, bills, messages and ratings. Use **Book a service** from here for a returning customer.

A customer page: cars, numbers and full history

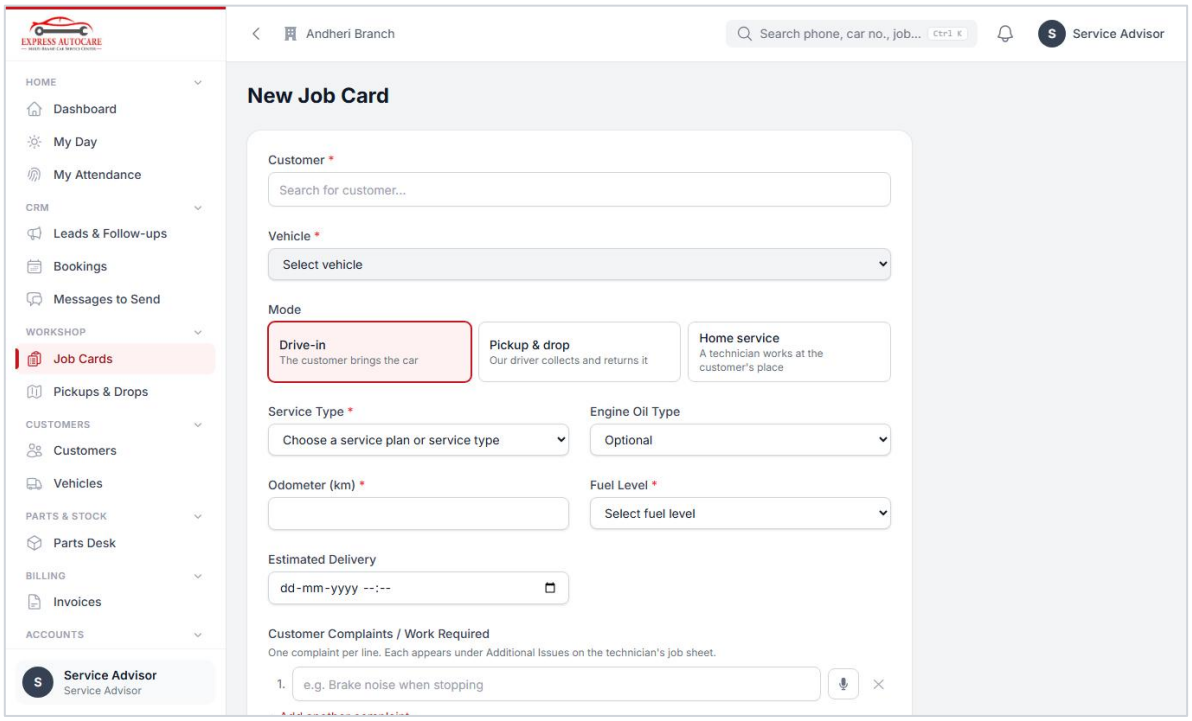

Connects to CRM (leads and bookings), Job cards, Billing (customer credit).

6.2 Opening a job card

Most job cards open **from a booking** (*Car arrived*), already filled in. For a car that came without a booking:

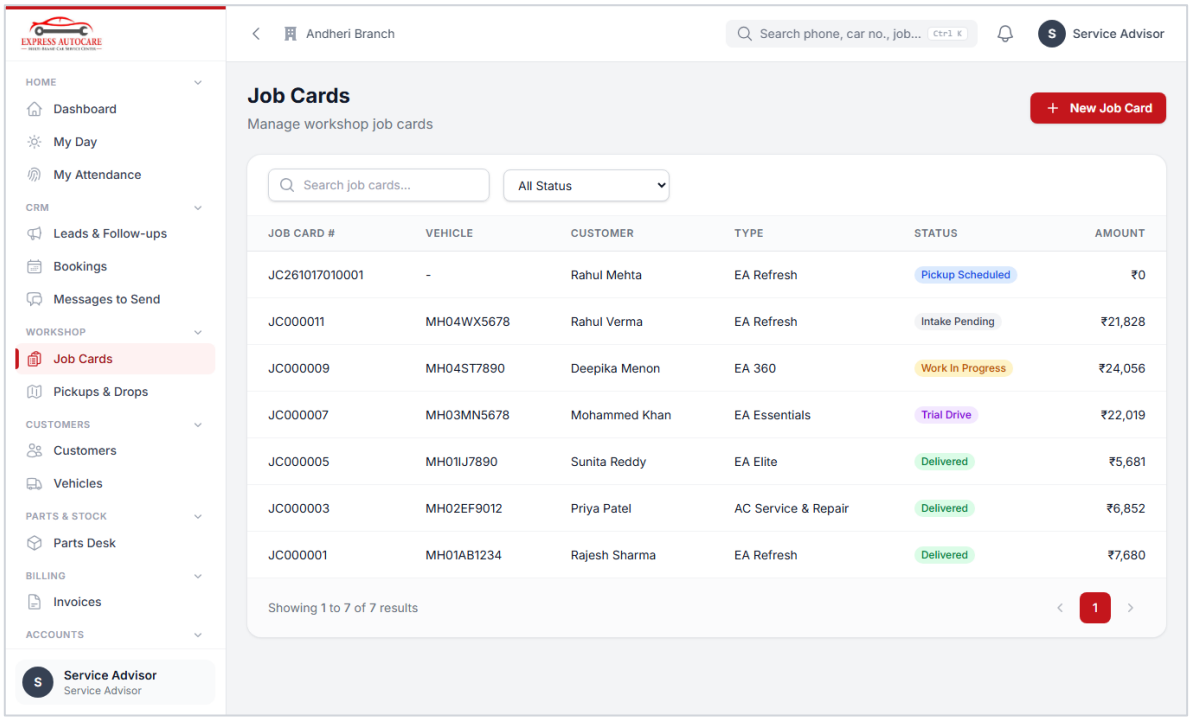

1. Open **Workshop › Job Cards** and tap **New**.
2. Search and choose the **Customer**, then the **Vehicle**.
3. Choose the **Mode**: Drive-in, Pickup & drop, or Home service.
4. Choose the **Service Type** (a service plan, or a repair type) and the **Engine Oil Type** if a plan.
5. Type the **Odometer** reading and choose the **Fuel Level**.
6. Set the **Estimated Delivery** time.

7. Write the **Customer Complaints**, one per line (you can also tap the microphone and speak). Each one appears on the technician's job sheet.
8. Save. Then assign the technician(s) and the bay on the job card.

New job card

The **Job Cards** list shows every job with its stage. Use the filters and the search to find one.

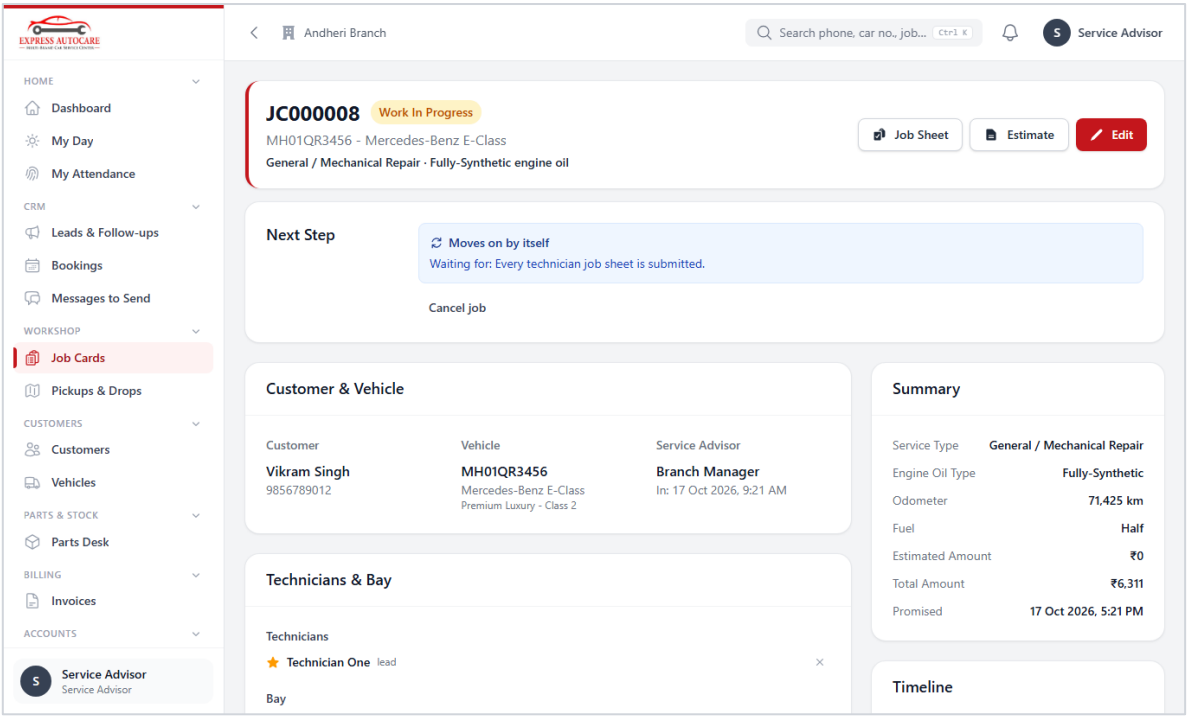

The job card list

6.3 The job moves on by itself

You never have to change a job's stage by hand. When the work of one stage is complete, the job moves to the next, and the customer gets that stage's WhatsApp message (if one is set):

Intake → Estimate & approval → Work in progress → Parts → Trial drive → Wash → Final QC → Bill → Gate pass → Delivered

The **Next Step** box on the job card always tells you what the job is waiting for, for example "Every technician job sheet is submitted".

A job card: the Next Step box tells you what it is waiting for

> **Careful** A manager can push a job on when needed (**override**), but always has to write a reason. The reason is kept in the job's timeline.

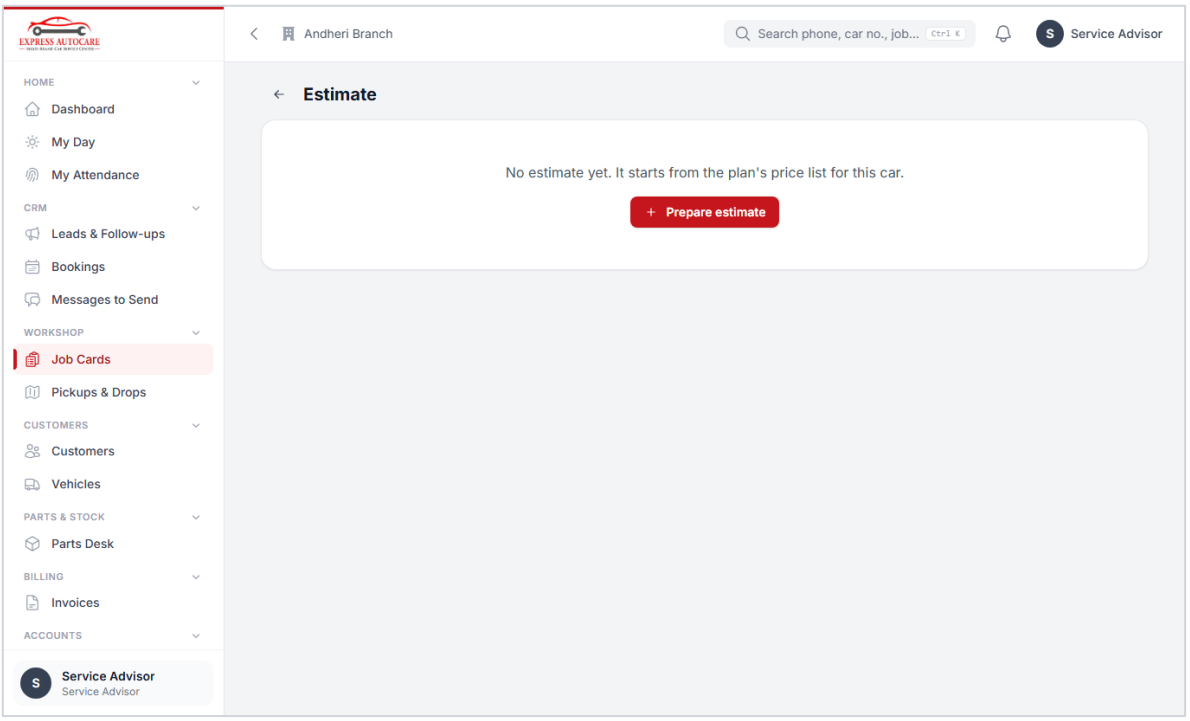

6.4 Intake (advisor)

- Do the trial drive with the customer and note what you found.
- Take the photos and videos of the car that the intake asks for (all sides, dashboard with odometer and fuel, damage).
- For a pickup, the driver's pickup photos are the intake.

6.5 Estimate and customer approval (advisor)

1. On the job card, tap **Estimate**, then **Prepare estimate**. It starts from the plan's price list for this car.
2. Add any extra work and parts (parts prices come from the parts coordinator, see chapter 8).
3. Tap **Send to customer**. The customer gets a link on WhatsApp and approves or declines **each line**.

4. You get an alert when they answer. Declined items are kept as "Recommended but not approved" and the customer is reminded about them later.

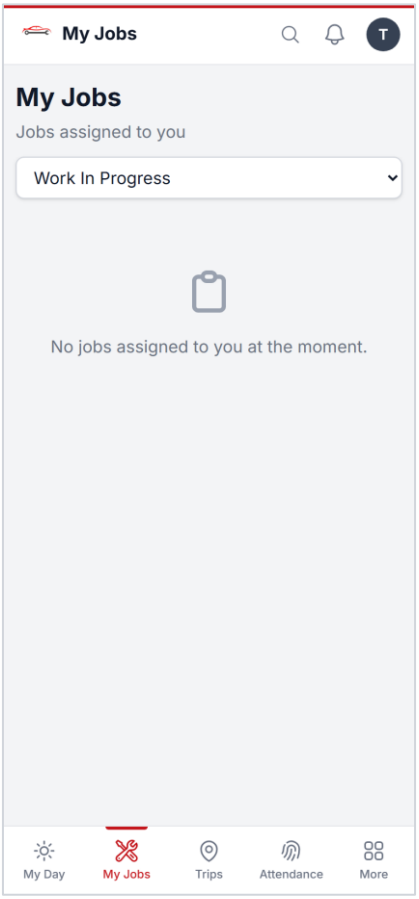

The estimate page before it is prepared

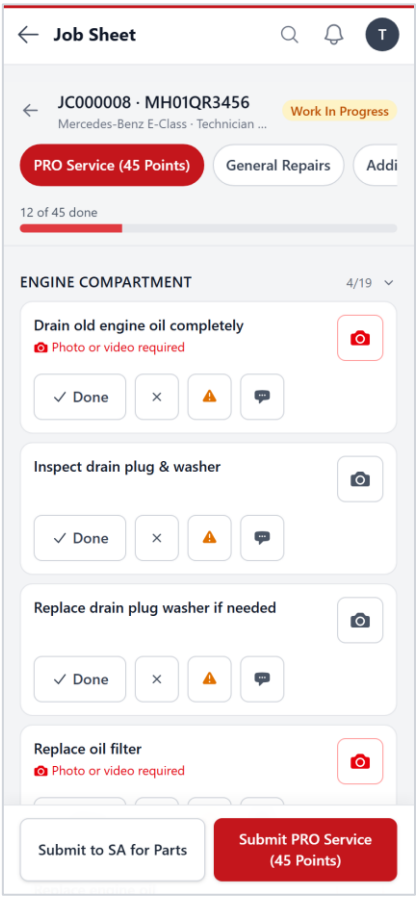

6.6 Technicians: My Jobs and the job sheet

Technicians work almost only from the phone.

1. Open **My Jobs**. It lists the jobs assigned to you.
2. Tap a job to open its **job sheet**: the list of activities for this plan or repair.
3. For each activity, tap **Done** or **N/A**. Where it asks for a photo or video, take it in the app.
4. Found another problem? Add it under **Additional Issues** with a photo of the faulty part, and list the parts needed.
5. Tap **Submit to SA for Parts** so the advisor can get the price and the customer's approval.
6. When the new part arrives you get an alert. Fit it, take a photo of the fitted part, and mark it Done.
7. When everything is done, **Submit** the job sheet.

My Jobs

A job sheet with its activities

> **Tip** Fit a new part **only after** it has arrived and been approved. If Purchases is switched on, you will also be asked to confirm the part is the right one.

6.7 Trial, wash and final QC

- Advisor: after the work, record **Trial drive OK** and **Washing done** on the job card.
- Manager: do the **final QC** check. The photo must be taken within 30 seconds, live, so it proves the car was checked.
- After final QC the job is ready for the bill (chapter 9).

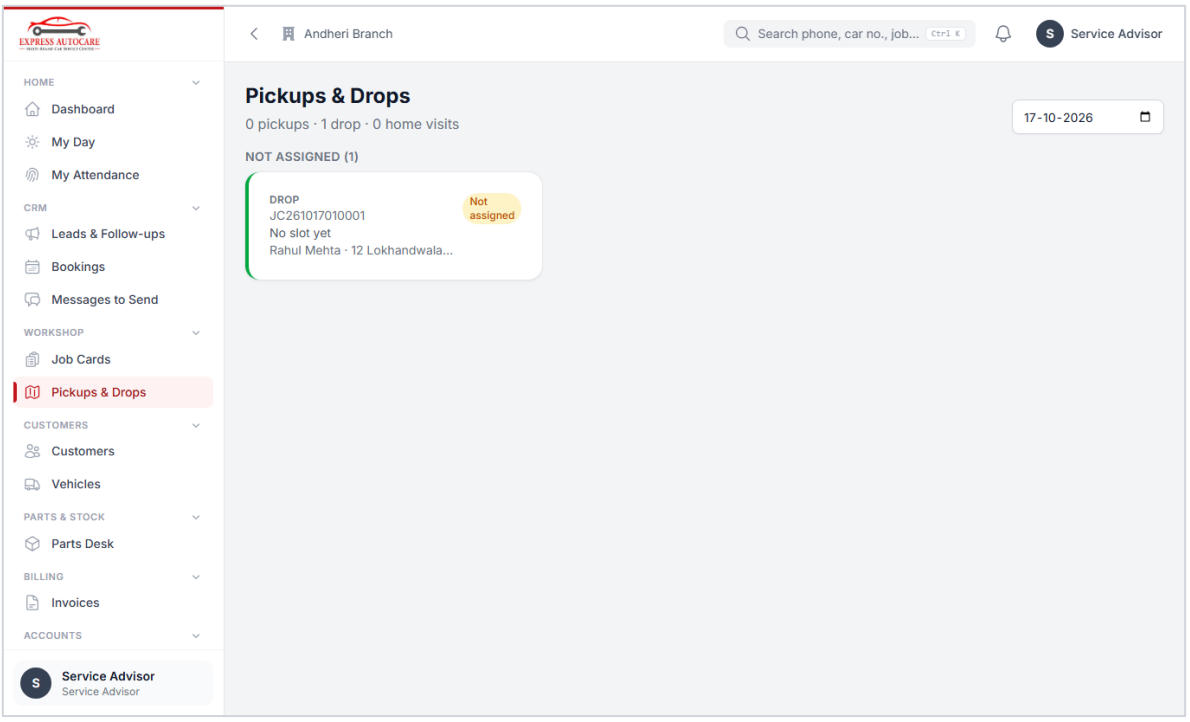

> **Connects to** Parts (chapter 8), Billing (the bill is made from the approved estimate), CRM (delivery wins the lead and starts the thank-you and feedback).

7. Pickup, drop and home service

When a customer chooses **Pickup & drop** or **Home service**, the job card gets one or more **trips** for a driver or a home-service technician.

7.1 Advisor: planning trips

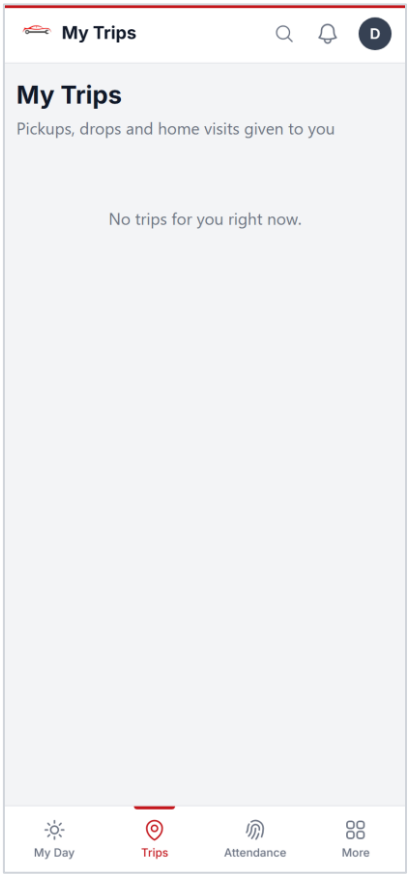

- Trips are made by themselves from a pickup or home booking. You can also add one on the job card.
- **Workshop › Pickups & Drops** shows the day's trips by status, so you can give each one to a driver and see where every car is.

Pickups & Drops: today's trips

7.2 Driver: My Trips

1. Open **My Trips**. It lists the pickups, drops and home visits given to you.
2. Tap a trip and tap **Start**. Use **Navigate** to open the map.
3. At the customer's place, tap **Arrived**.
4. For a pickup: enter the odometer and fuel, and take the photos and videos asked for (this is the car's intake). Tap **Collected**.
5. For a drop: the gate pass must be issued (the bill paid). Take the handover photos and tap **Delivered**.
6. If the customer pays you, record it on the trip (it shows as money you hold until you hand it over).

My Trips on a driver's phone

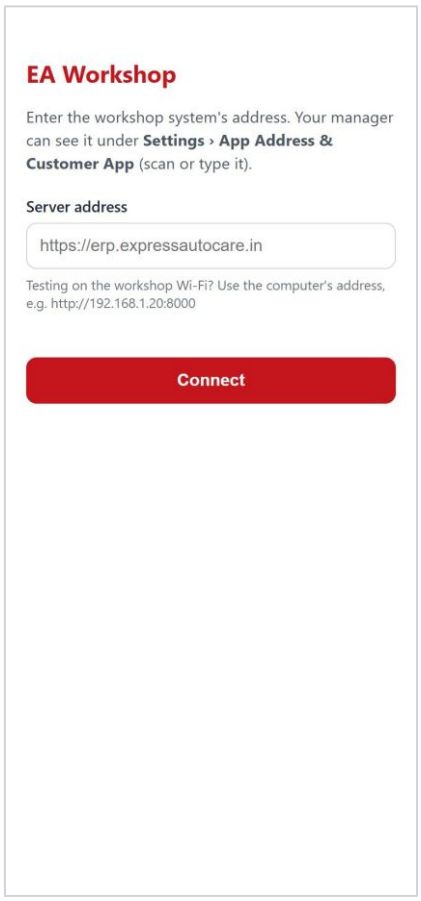

Home-service technician: the visit has its own job sheet. Work through it like any job sheet and close the visit with the photos asked for.

> **Connects to** Job cards, Billing (pickup and home charges are added to the bill), Attendance (on a trip day you can punch from where you are).

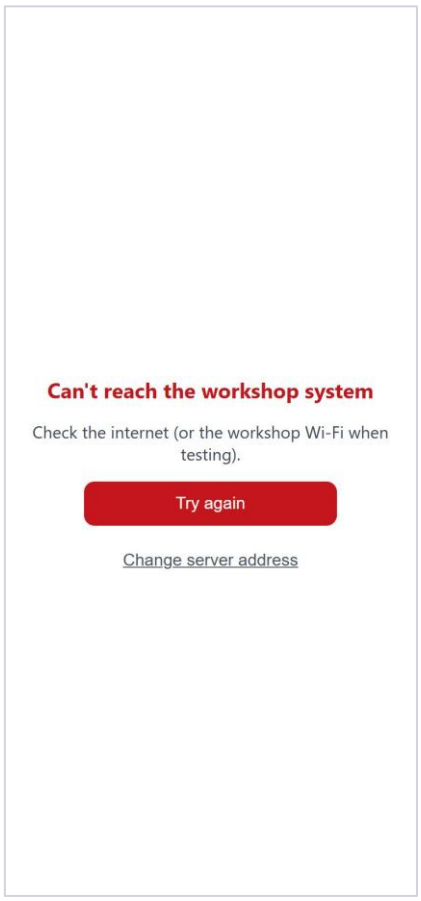

7.3 The EA Workshop Android app (drivers and field staff)

The Android app is the same system in an app. Use it if you work outside the workshop: it keeps your location going with the screen locked, and shows a small notification "Sharing your location until you punch out".

1. Get the app file (APK) from your manager on WhatsApp and open it. Allow **Install unknown apps** once if the phone asks.
2. Open **EA Workshop**. The first time, it asks for the **server address**: type what your manager gives you (it is on Settings › App Address & Customer App) and tap **Connect**.
3. Sign in with your phone number or email and password, as usual.
4. When you punch in, allow **Location** and **Notifications**.
5. In the phone's Settings › Apps › EA Workshop › Battery choose **Unrestricted**, so the phone does not stop the location service.

First start: the server address

No network: try again or change the address

Note The address can be changed later: **Settings › Change server address** inside the app. The step-by-step guide for installing and publishing the apps is in the separate document "EAERP App Installation and Play Store Guide".

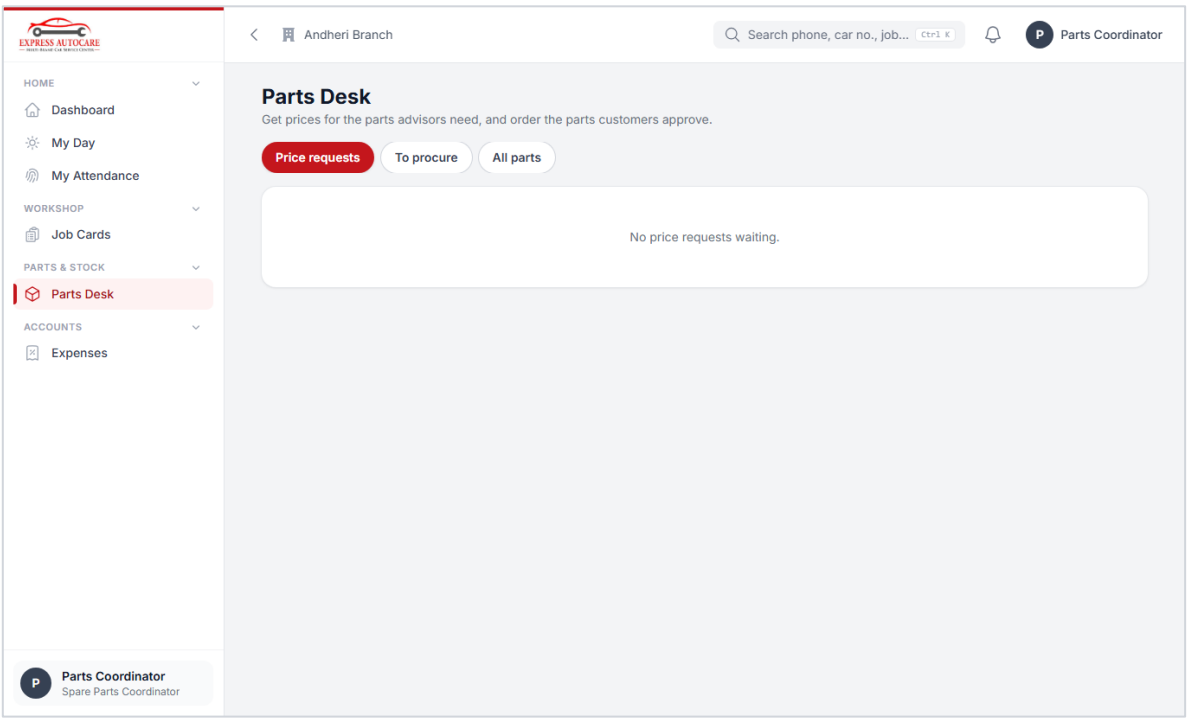

Connects to Live Staff Map (11.6): the advisor sees where you are and which trip you are on; the customer sees you coming on their app (13.5).

8. Parts and purchases (parts coordinator)

8.1 The Parts Desk

Parts & Stock › Parts Desk lists the parts that advisors have asked for, job by job.

1. For each part, get prices from suppliers and enter the best one (the selling price is worked out with the margin set by the owner).
2. The advisor adds it to the estimate and the customer approves it.
3. Order the approved parts from the supplier.
4. When the parts arrive, mark them **Received** (or receive them on a GRN, below). The technician and advisor get an alert.

The Parts Desk

8.2 When Purchases & Stock is switched on

- **GRN** for every supplier bill: photo of each part, whether it is a GST bill, and whether it is on credit or paid.
- The technician confirms **right part / wrong part** before fitting.
- **Stock** for engine oil and consumables; **plan kits** are issued to jobs.
- **Suppliers** shows how much we owe each supplier and records payments to them.
- The bill for a job waits until all its parts are received on a GRN.

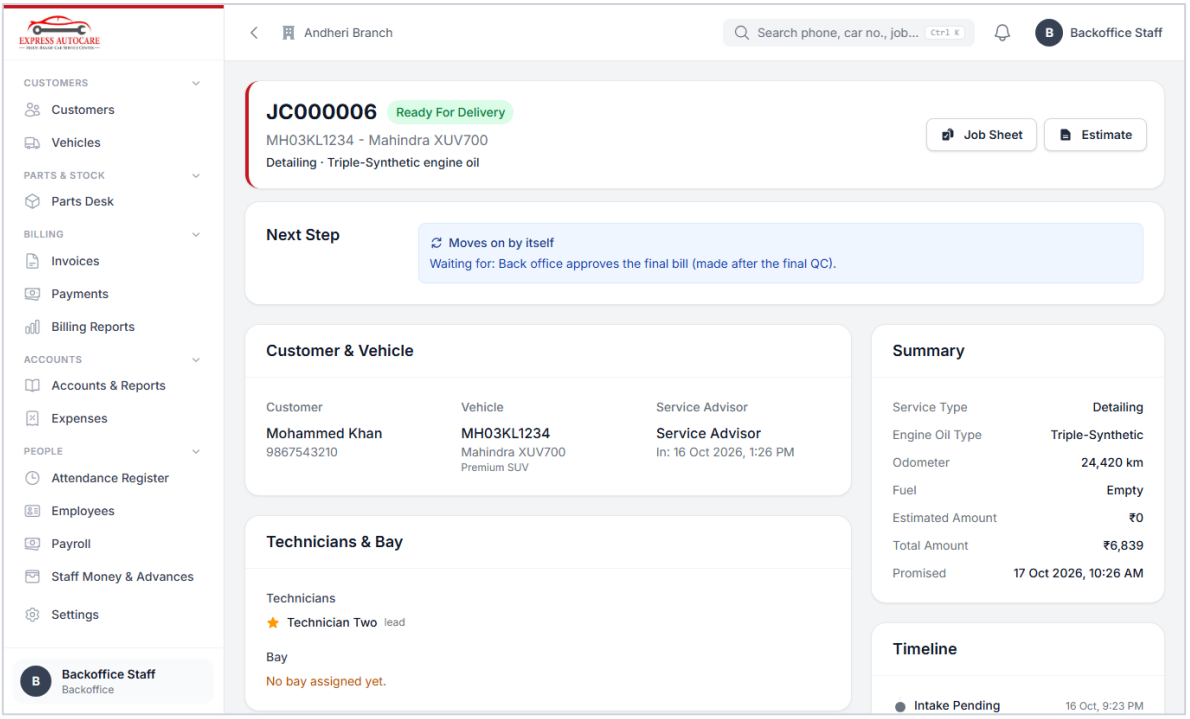

Connects to Job cards, Billing, Accounts (purchases and supplier dues are posted by themselves).

9. Billing, payments and delivery

Billing is done on the job card, in the **Billing & Delivery** part. The **Billing** menu has the lists of all invoices and payments and the billing reports.

9.1 Taking a payment (advance or final)

1. Open the job card and go to **Billing & Delivery**.
2. Tap **Record payment**.
3. Enter the amount and choose how it was paid: cash, UPI, card, bank… One payment can be **split** (for example part cash, part UPI).
4. If the customer paid an employee's **own** UPI or gave them cash, choose **Collected by staff** and the employee. The money shows against that employee until they hand it over.
5. Save. A receipt is made.

Billing & Delivery on a job card that is ready

9.2 From bill to delivery

1. After final QC, tap **Make bill**. A **proforma** is made from the approved estimate (plan lines, extra work, parts, pickup charges).
2. Check the lines, then tap **Approve**. The customer can be sent the bill to pay the balance.
3. When it is paid, **Convert to tax invoice** (or close a paid proforma if no GST invoice is needed).
4. Once the bill is paid in full, the **gate pass is issued by itself**.
5. Tap **Vehicle out** when the customer takes the car. The job is delivered.

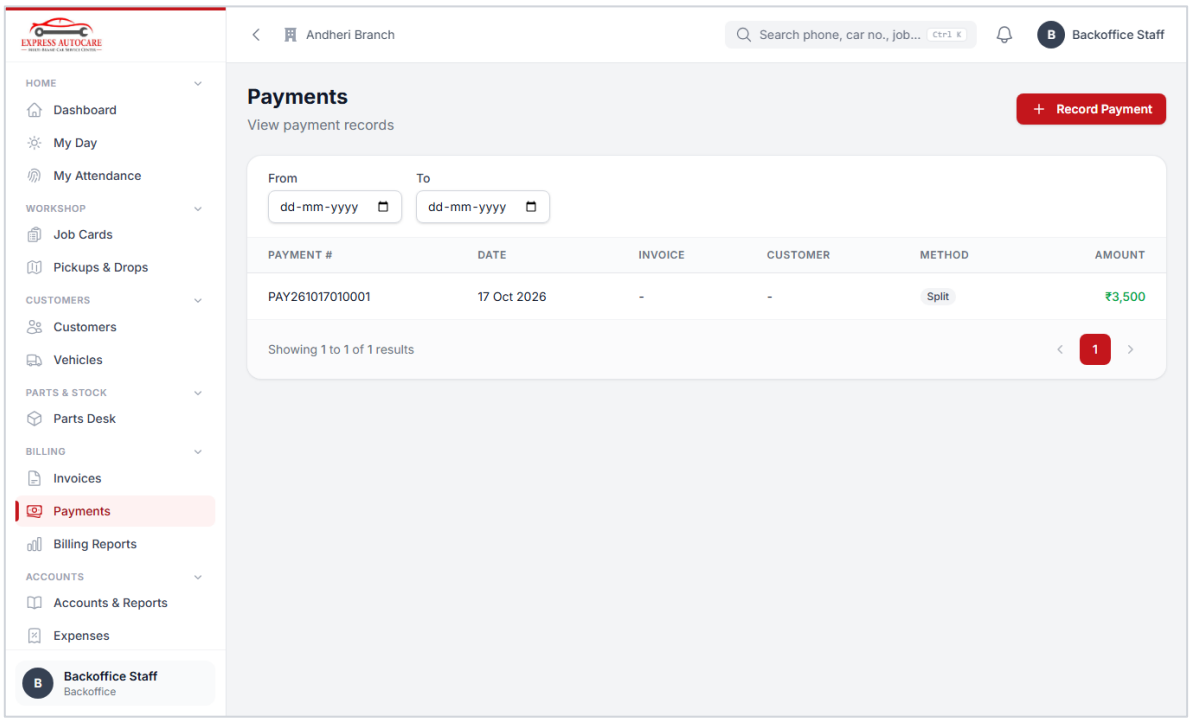

> **Careful** A gate pass **before** full payment needs the owner or manager, with a reason.

9.3 Paid too much? Refunds and customer credit

If the customer paid more than the bill, choose either **Refund** (give the money back) or **Keep as customer credit**. The credit can be used on a later job and shows on the customer page.

9.4 Payments list

Billing › Payments lists every payment received, with filters by date and method. **Billing Reports** gives daily collection and billing totals.

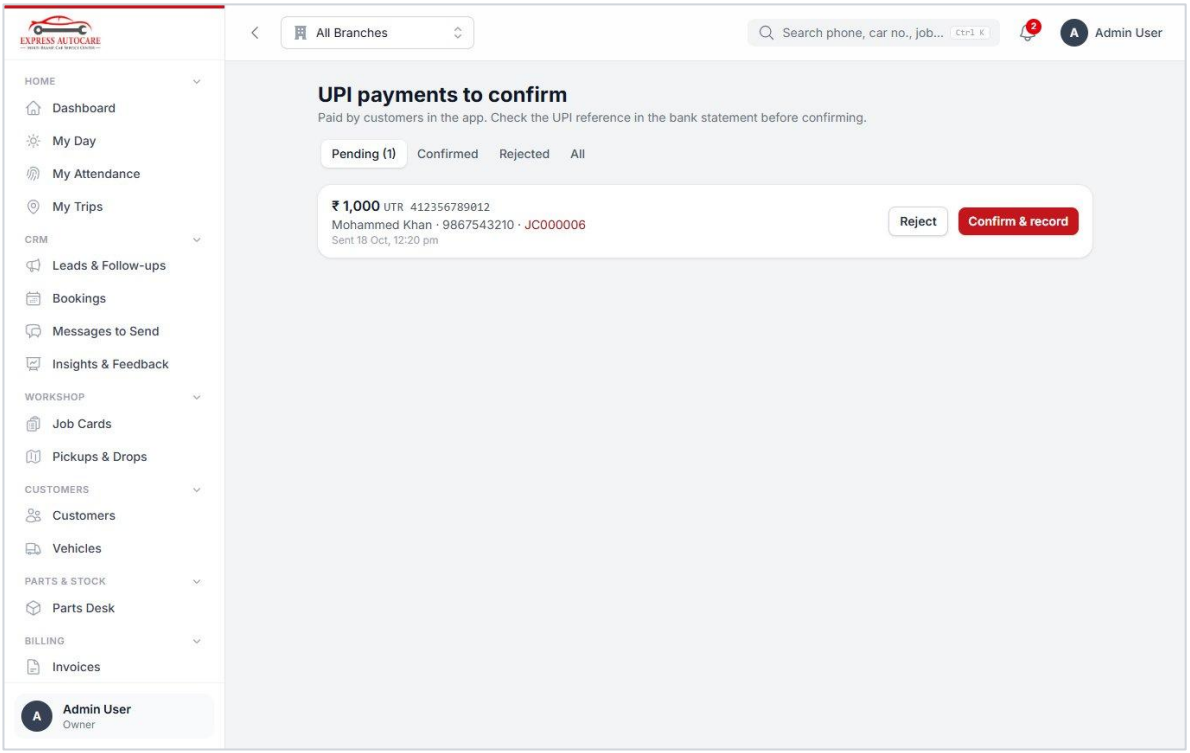

All payments received

> **Connects to** Accounts (every bill and payment is posted by itself), CRM (the bill amount is credited to the lead), Payroll (money held by staff).

9.5 UPI payments from the customer app

Customers can pay the balance from the customer app by UPI: the app opens their UPI app with your UPI ID and the amount filled in. Afterwards they send the **UPI reference (UTR)**. The money is not recorded until back office checks the bank and confirms it.

1. You get a bell: **UPI payment to confirm**. Open **Billing › UPI Payments to Confirm**.
2. Check the bank statement (or the UPI business app) for the amount and the UTR shown. Open the screenshot if the customer added one.
3. Found it: tap **Confirm & record**. The payment is recorded on the job as UPI with the UTR as the reference, exactly as if you entered it at the counter. The customer sees "Received".
4. Not found: tap **Reject** and write the reason (the customer sees it in the app and is told to call you).

Billing › UPI Payments to Confirm

Careful Confirm only after you see the money in the bank. The same UTR cannot be sent twice. If the customer paid a different amount, record it from the job's Billing tab and reject the app request with a note.

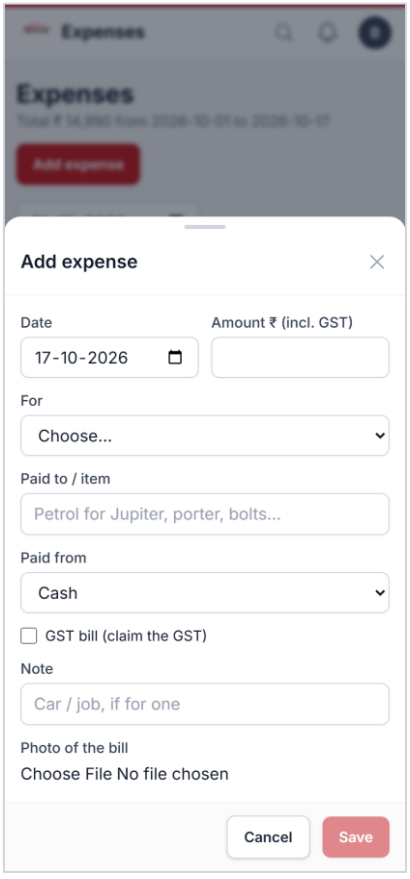

Connects to The workshop's UPI ID is set by the owner in Settings › App Address & Customer App (12.5). Confirmed payments count for the gate pass, the accounts and the daily collection like any other payment.

10. Accounts (back office, owner)

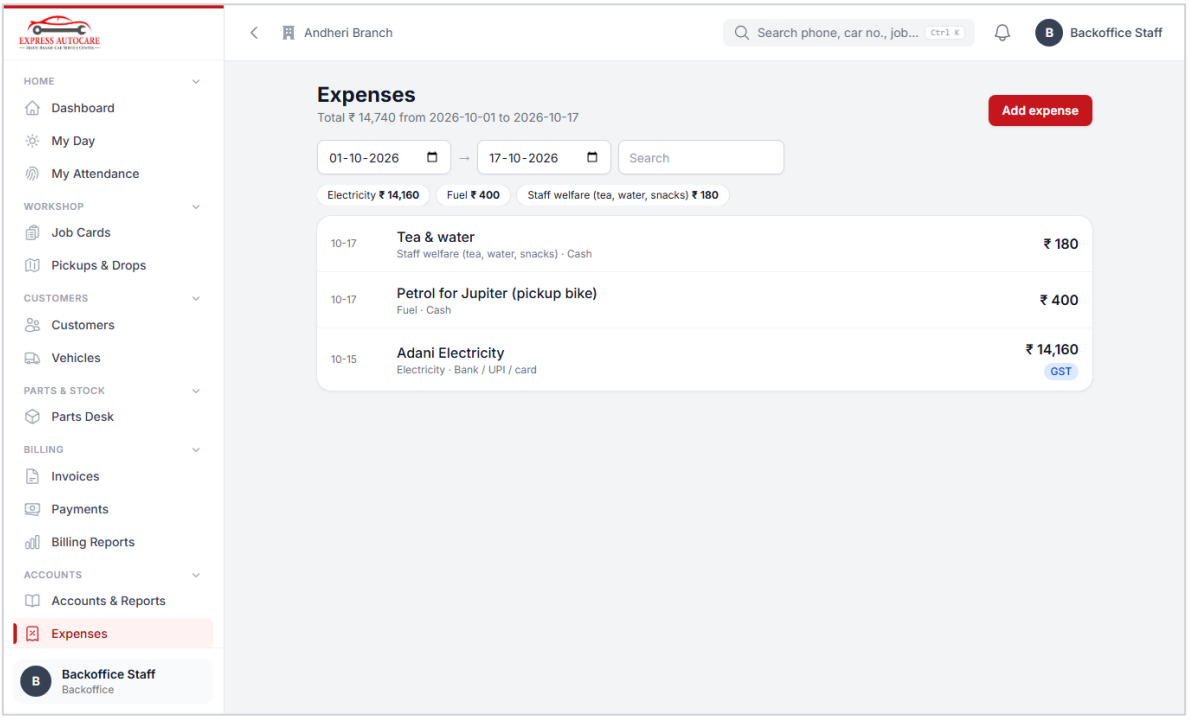

The accounts are kept by **double entry**, but you do not need to know accounting. Bills, payments, refunds, GRNs, supplier payments and payroll are **posted to the books by themselves**. You only enter what the system cannot know: expenses and a few transfers.

10.1 Recording an expense

1. Open **Accounts › Expenses** and tap **Add expense**.
2. Choose the date and **what it was for** (rent, electricity, fuel, tea, porter…).
3. Type who it was **paid to** and the **amount**.
4. Choose where the money came **from**: cash, bank, a supplier on credit, or customer money held by an employee.
5. If it is a **GST bill**, tick it and choose the GST rate, and type the bill number.
6. Take a photo of the bill and save.

Adding an expense on the phone

The expenses list

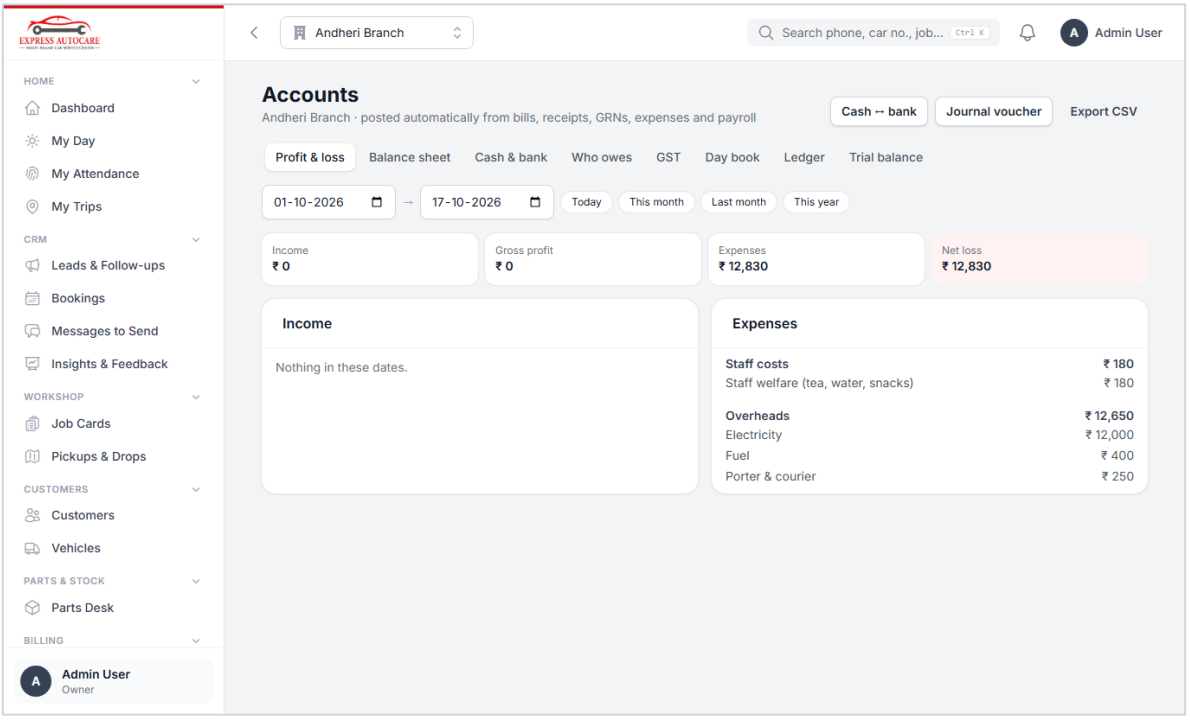

10.2 Other entries

- **Cash ↔ bank**: when cash is deposited in the bank, or cash is withdrawn.
- **Journal voucher**: for anything else (your CA can guide you).
- **Opening balances**: entered once, when you start using the system.

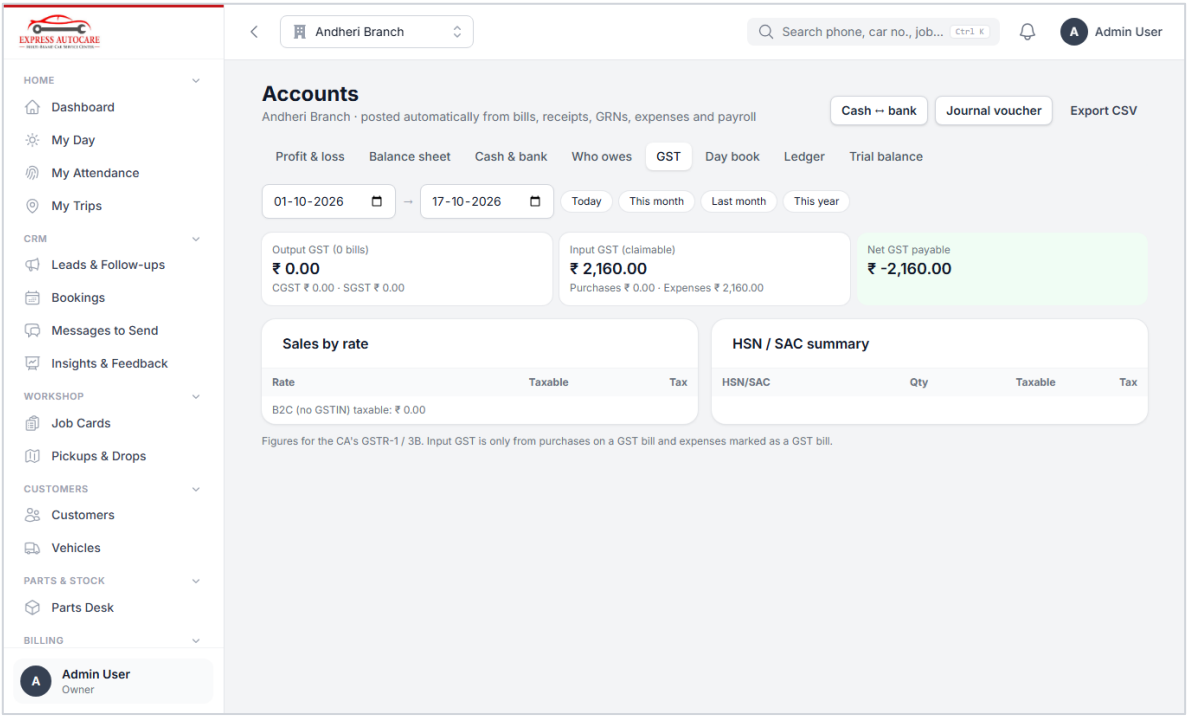

10.3 Reports

Accounts › Accounts & Reports has these tabs:

Report	What it tells you
Profit & loss	Income, expenses and profit for any period, by branch.
Balance sheet	What the business owns and owes on a date.
Cash & bank book	Every rupee in and out of cash and each bank account.
Who owes	Money customers owe us, money we owe suppliers, money with staff.
GST	Output GST on sales and input GST on purchases and expenses: the summary for your CA.
Day book, Ledgers, Trial balance	Detailed entries for checking.

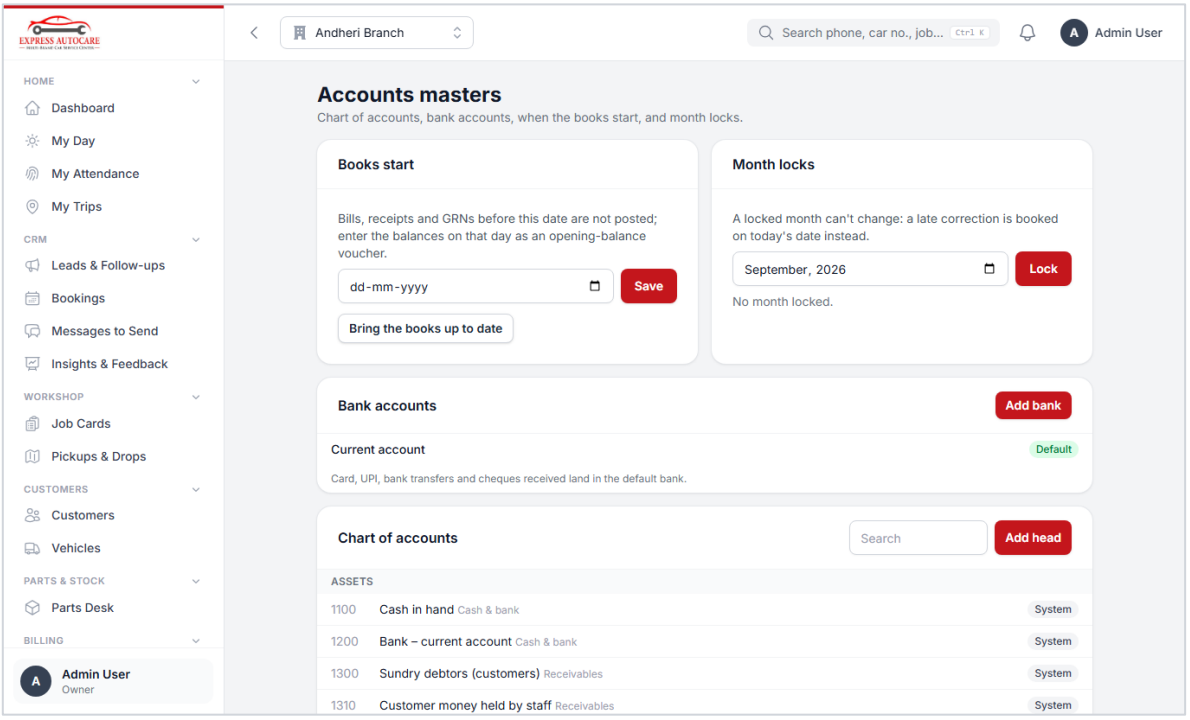

Profit & loss

The GST summary

> **Tip** Every report has **Export CSV** to open it in Excel or send it to the CA.

The owner can **lock** a finished month in *Settings › Chart of Accounts*, so nothing in it can be changed later.

Settings › Chart of Accounts

Connects to Billing, Parts and purchases, Payroll, CRM (referral rewards).

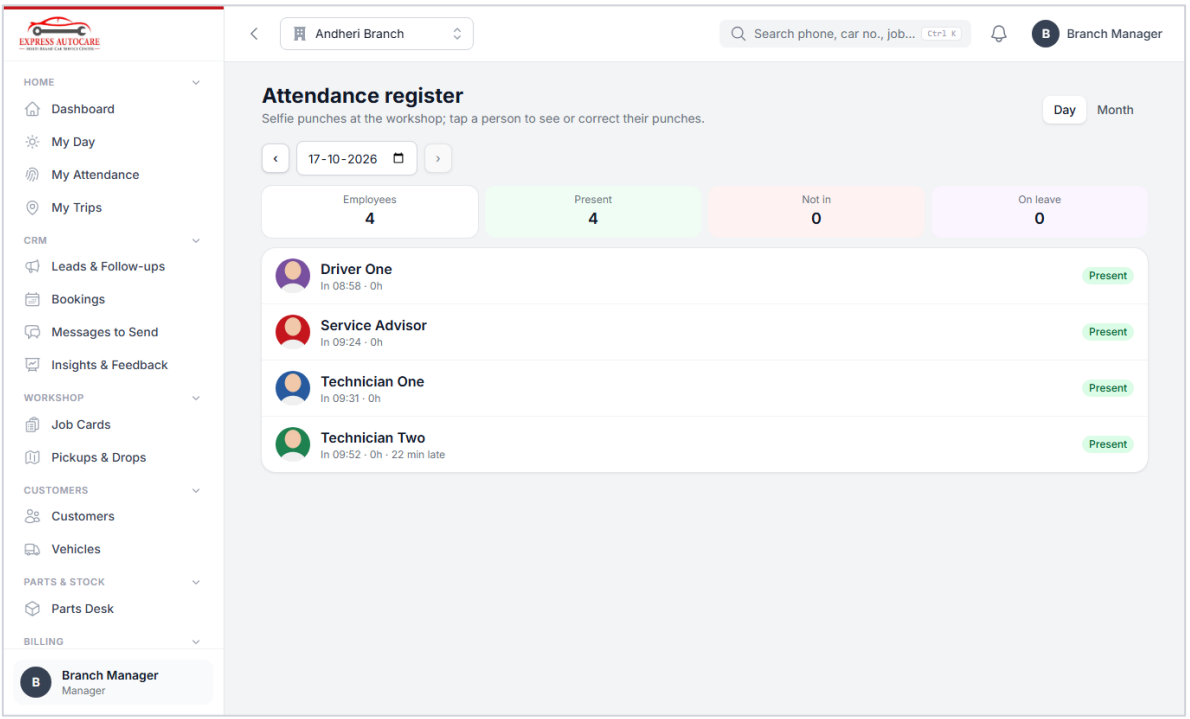

11. People: attendance register, leave, employees and payroll

This chapter is for **managers**, the **back office** and the **owner**.

11.1 Attendance register

People › Attendance Register shows everyone's day with their selfies, in and out times and late minutes. The month grid shows the whole team at once.

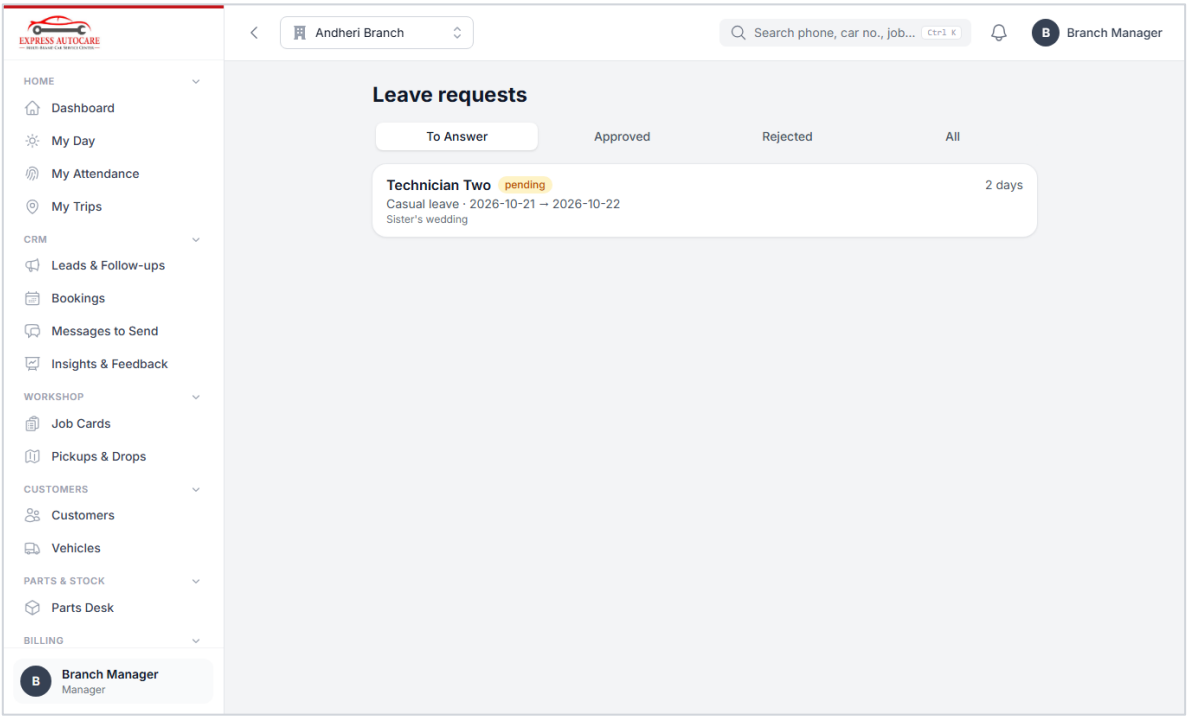

- Tap a person to see their selfies and punch details.
- **Add a missed punch** (forgot, phone dead) or **remove a wrong one**: always with a reason.
- At night, the system closes the day by itself: people who did not punch out are flagged for you to correct.

The attendance register with selfies

11.2 Leave requests

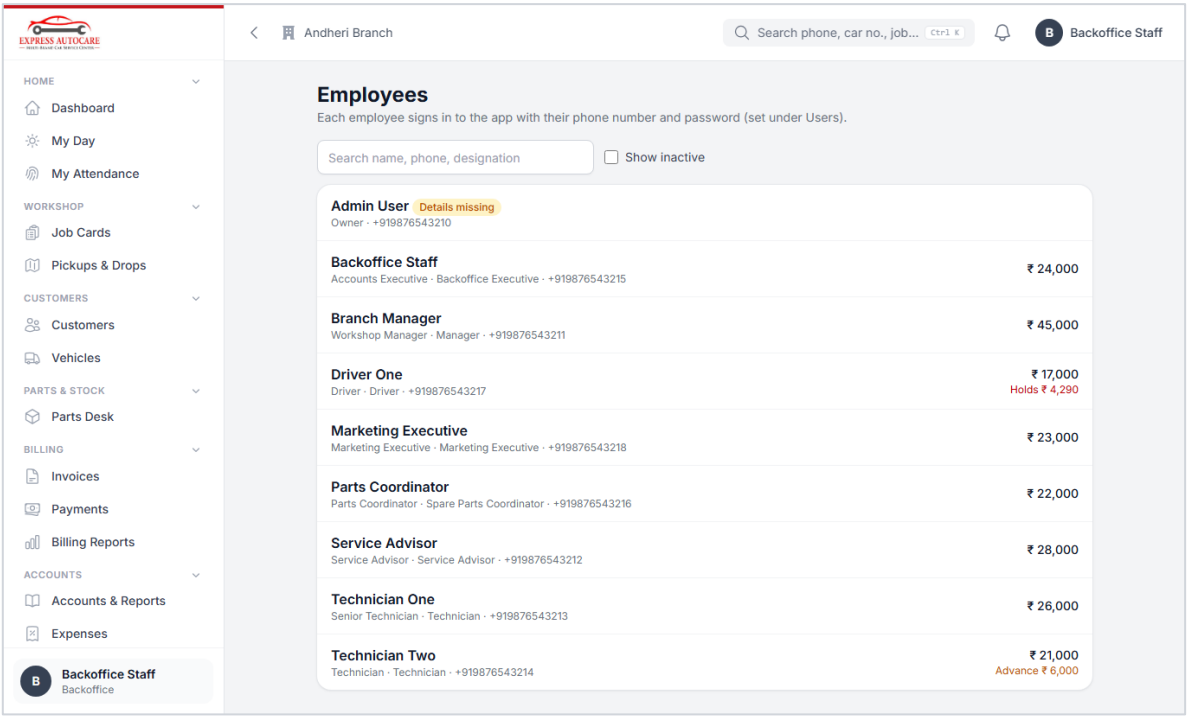

People › Leave Requests lists the requests waiting for you. Tap **Approve** or **Reject** (add a note if you reject). The employee gets an alert.

Leave requests waiting for approval

11.3 Employees

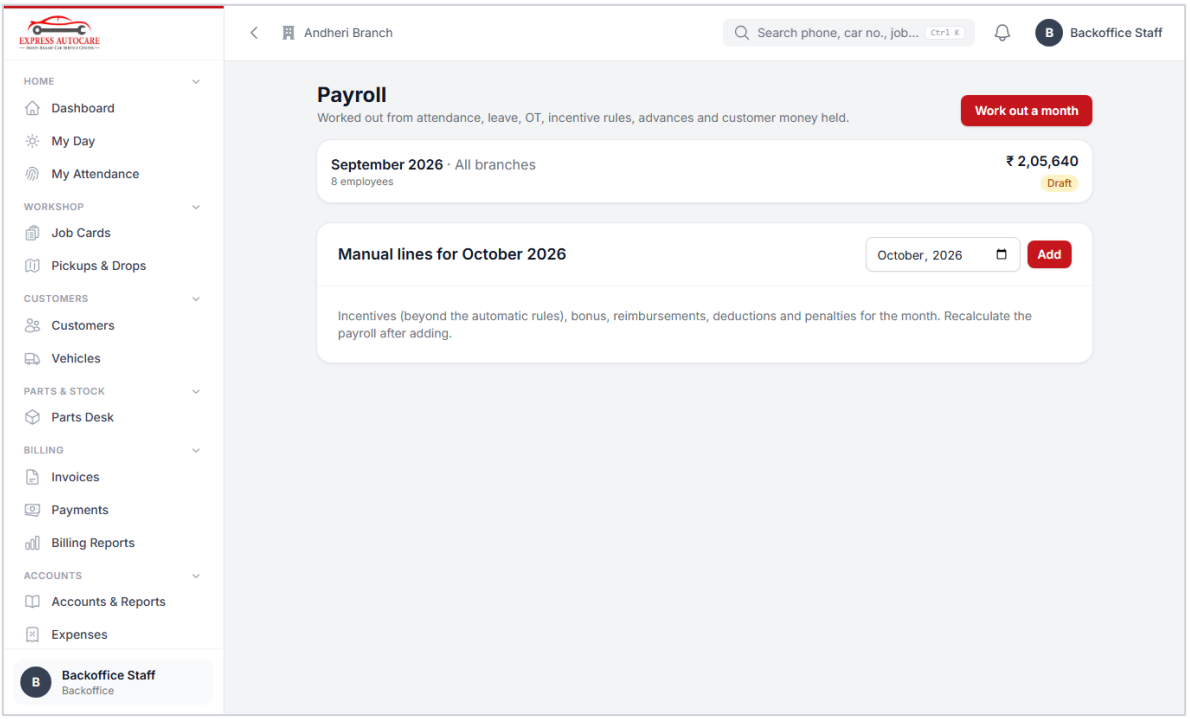

People › Employees has one record per employee: designation, branch, shift, weekly off, joining date, and their app login. Only people who prepare payroll can see and change pay details: monthly salary, overtime rate, off-day pay, PT / PF / ESI and bank account.

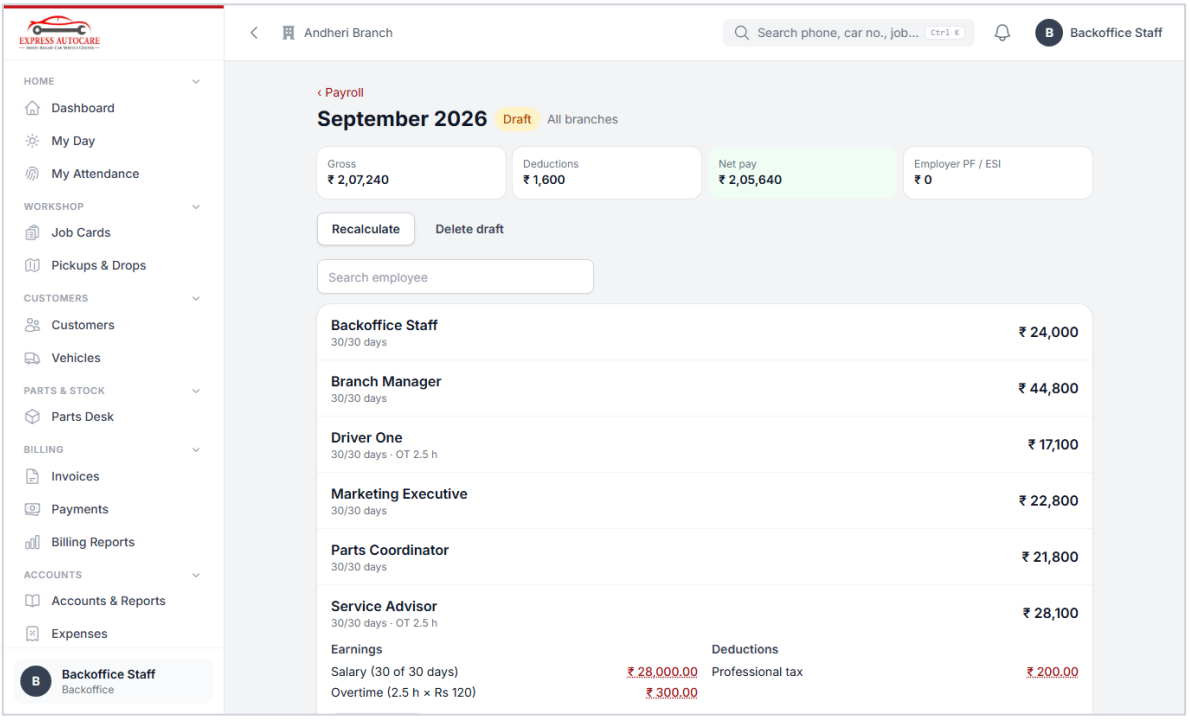

The employee list

11.4 Running the monthly payroll

1. After the month ends, open **People › Payroll** and tap **Work out a month**. Choose the month.
2. The system makes a payslip for every employee from attendance, leave, overtime, off-day work, incentives, advances to recover, staff-held money and deductions.
3. Open each employee to check the lines. To correct a line, change it and write the reason.
4. Add any **bonus, incentive, deduction or penalty** under **Manual lines**. Automatic incentives come from the incentive rules (Settings).
5. If attendance was corrected after you worked out the month, tap **Recalculate**.
6. The **owner finalises** the payroll. After that, payslips appear for the employees.
7. When salaries are paid, tap **Mark paid**. The salary cost and payments go into the accounts by themselves.

Payroll: one run per month

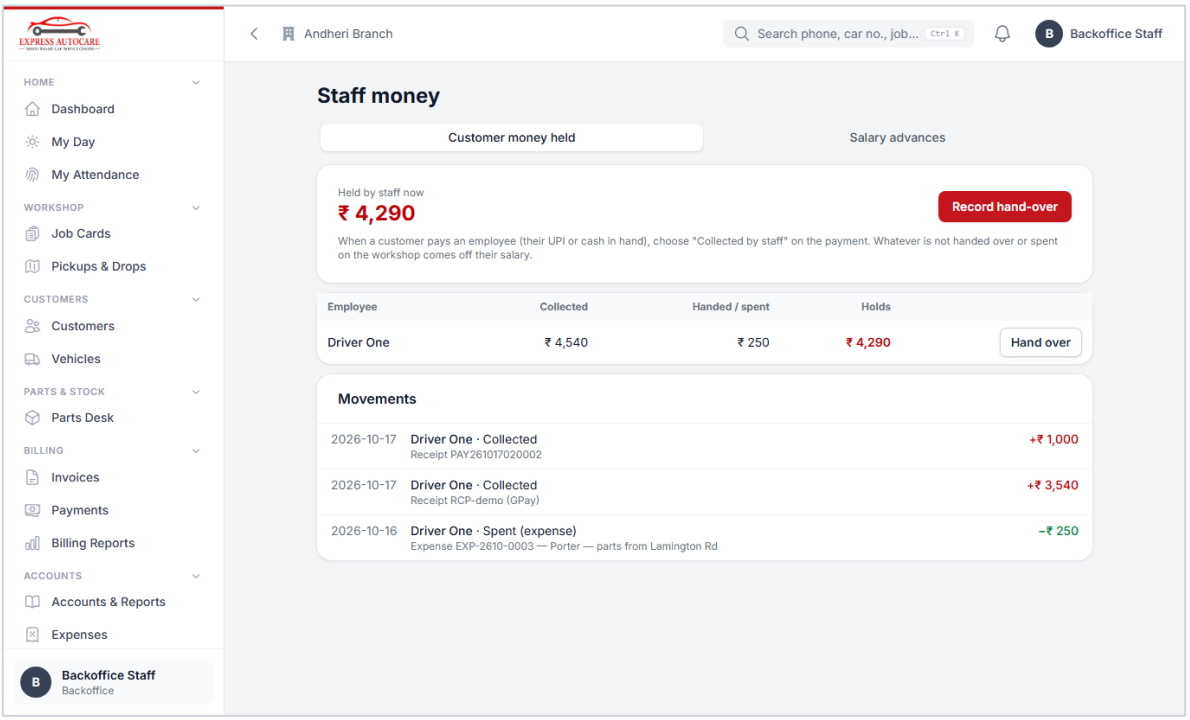

A draft month: totals, and one employee's earnings and deductions

11.5 Staff money and advances

People › Staff Money & Advances:

- **Give an advance**: amount, date, how it was paid, and how much to recover each month. It is cut from the salary automatically.
- **Customer money held by staff**: see who is holding how much. When an employee hands it over, record it here.

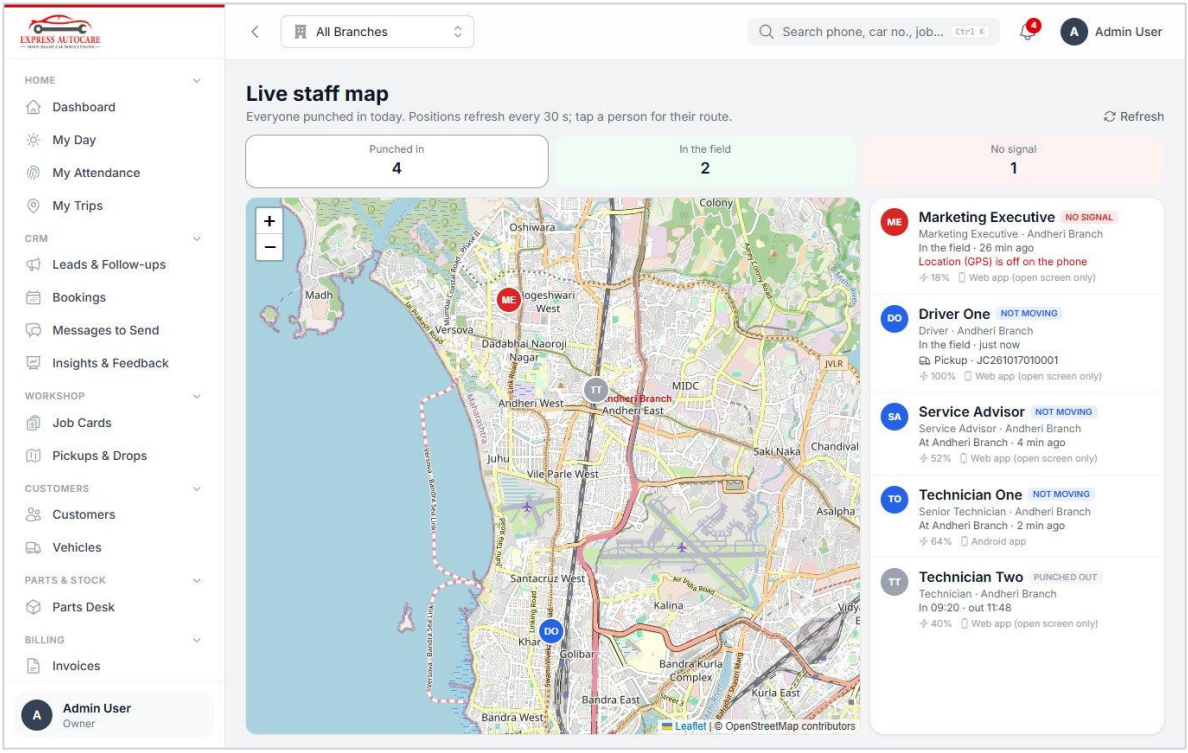

Staff money and advances

> **Connects to** Attendance, Billing (staff-held money), CRM (incentives for converted leads), Accounts (salary cost and payments).

11.6 Live Staff Map (owner, managers)

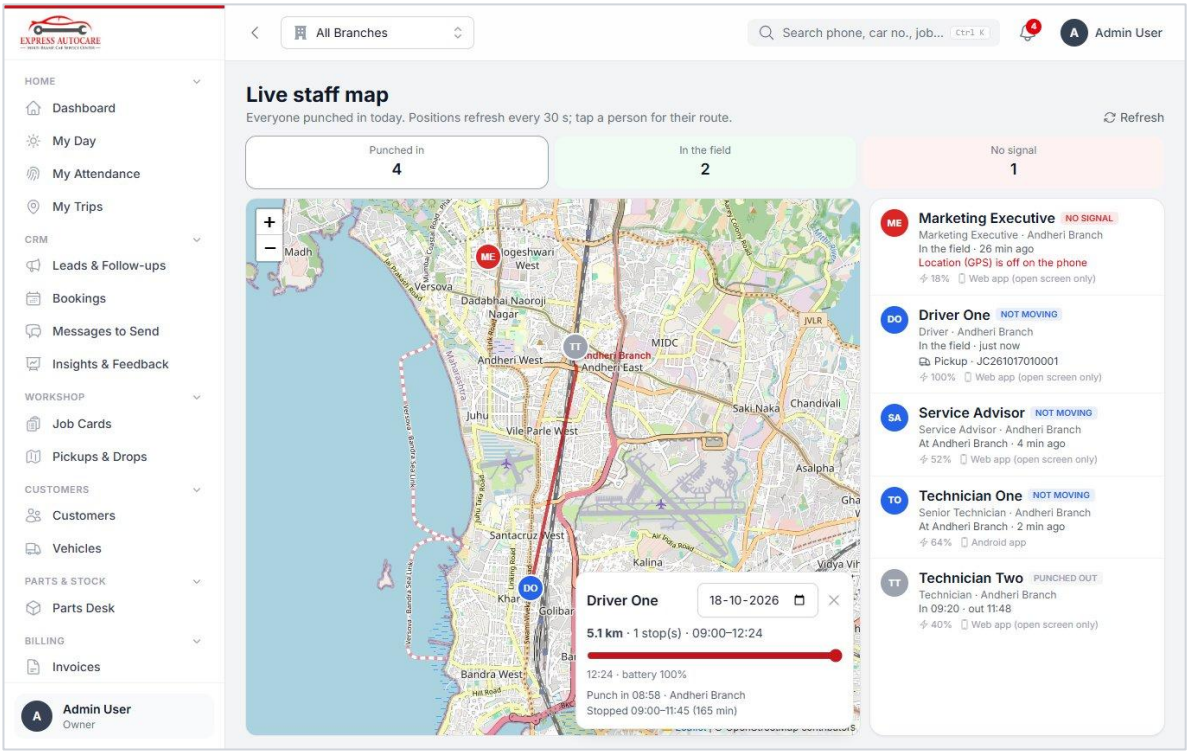

People › Live Staff Map shows everyone who punched in today on a map. Positions refresh every 30 seconds. The three boxes at the top count who is punched in, who is in the field (away from a workshop) and who has **no signal**; tap a box to show only those people.

- **Moving** (green) or **Not moving** (blue): the phone is sharing. "At Andheri Branch" means inside the workshop area.
- **No signal** (red): nothing from the phone for more than 10 minutes. The reason shows when the phone reported it (for example "Location (GPS) is off on the phone"). Call them.
- **Punched out** (grey): the last place and the punch times.
- Under each name: the pickup / drop / home visit they are on, the phone's battery, and whether it is the Android app (works in the background) or the web app (only while open).

Everyone punched in today

A person's day: tap a name. The route for the day appears with the kilometres travelled, the places they stopped (10 minutes or more), gaps with no signal, and the punches. Drag the slider to see where they were at any time, or pick another date.

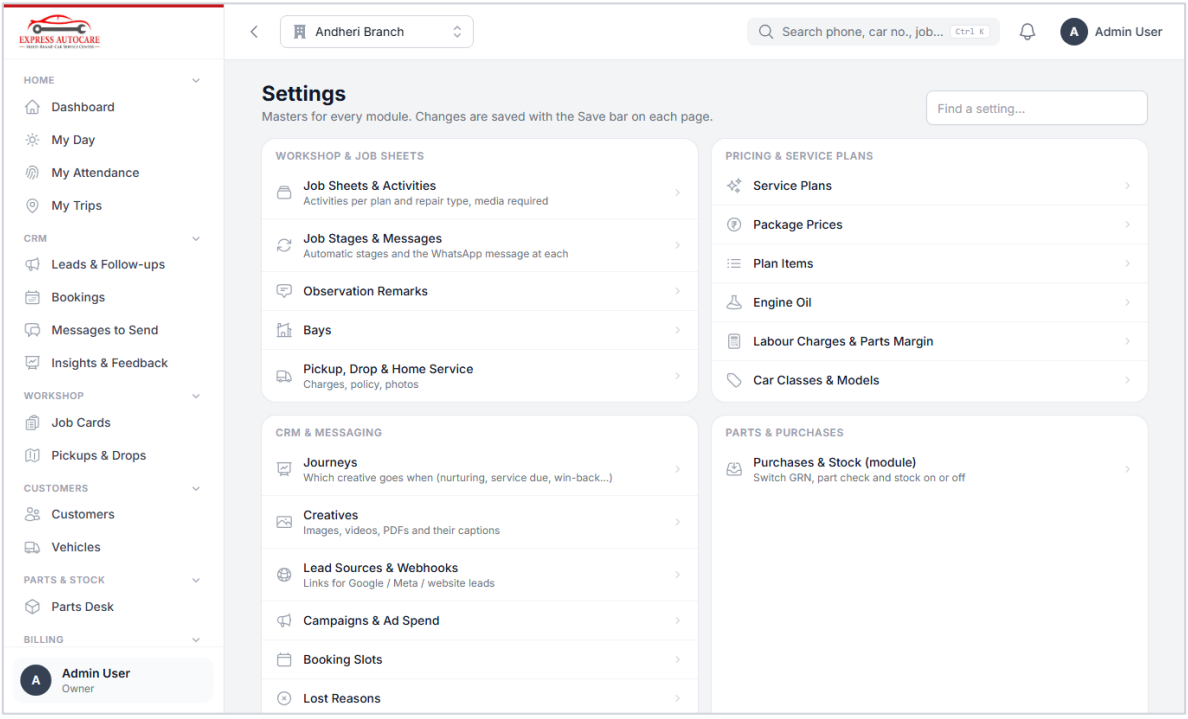

The route, stops and gaps for one person

> **Note** **Switching it off for one person:** People › Employees › edit the employee › untick **Share live location from punch in to punch out**. For everyone: Settings › Pay, OT, Statutory & Live Location (12.8).

> **Careful** Location is personal information. Use it for work (planning trips, safety, attendance questions) and keep it within the owner and managers. Employees are told about it the first time they punch in.

12. Settings (owner, managers)

All the **masters** (the lists and rules the system uses) are on one page: **Settings**. They are grouped by module, and there is a **Find a setting** box at the top. Every page has a **Save** bar at the bottom: nothing changes until you save.

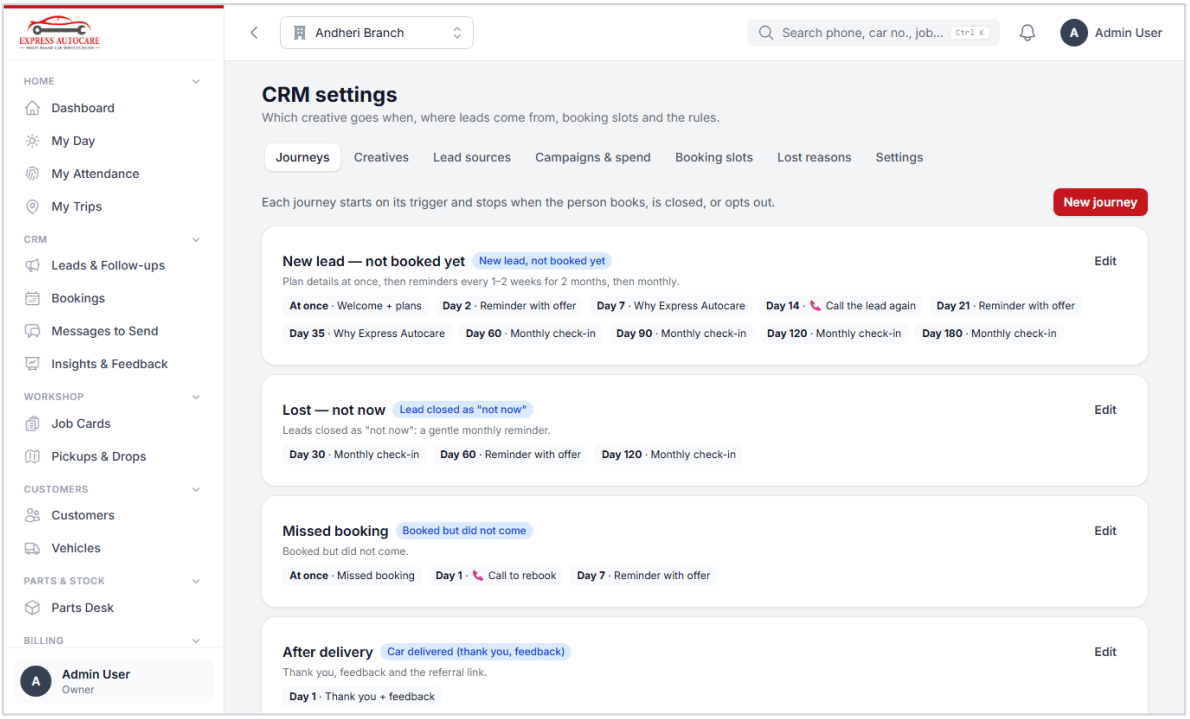

The Settings page: every master in one place

Group	What you set there
Workshop & job sheets	Job sheet activities per plan and repair type (and which photos / videos are required), job stages and their WhatsApp messages, observation remarks, bays, pickup / drop / home-service charges.
Pricing & service plans	Service plans, package prices per car type and oil, plan items, engine oils, labour charges and parts margin, car classes and models.
CRM & messaging	Journeys (which creative goes when), creatives, lead sources and webhook links, campaigns and ad spend, booking slots, lost reasons, CRM rules (call within N minutes, quiet hours, referral reward).
Parts & purchases	Switch Purchases & Stock on or off, suppliers.
HR & payroll	Pay and overtime rules, shifts, holidays, leave types, incentive rules, PT / PF / ESI.
Accounts	Chart of accounts, bank accounts, month lock.
Company & access	Users, branches (including the workshop location for attendance), roles and what each role may do, modules.

12.1 Journeys and creatives (automatic messages)

A **creative** is one message: a picture, video or PDF with its caption, or just text. In the caption you can use words that are filled in for each person: **:name**, **:car**, **:plan**, **:price**, **:book_link**, **:offer** and others.

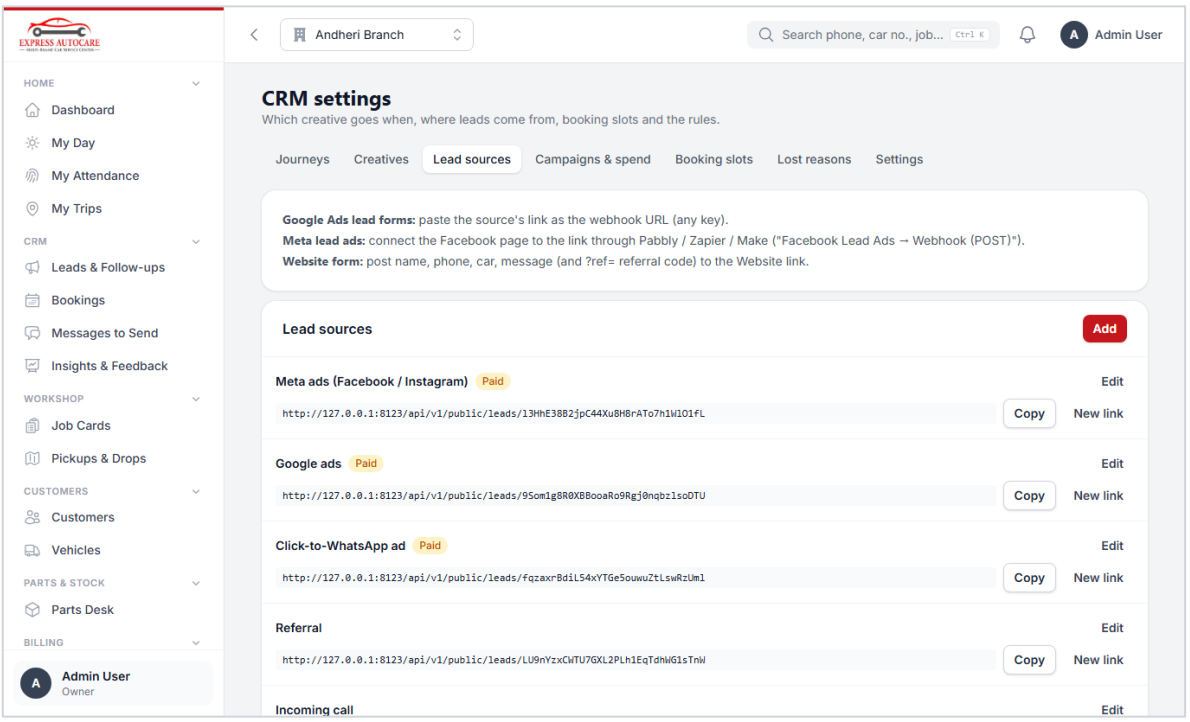

A **journey** is a timetable of creatives. For example, "New lead not booked": day 0 plan details, day 2 reminder with the offer, day 7 a creative, then every 10 days up to day 60, then monthly. Each step can also be a task (for example "call them") instead of a message. A journey stops by itself when the person books, asks to stop, or is closed as lost.

Journeys: which creative goes when

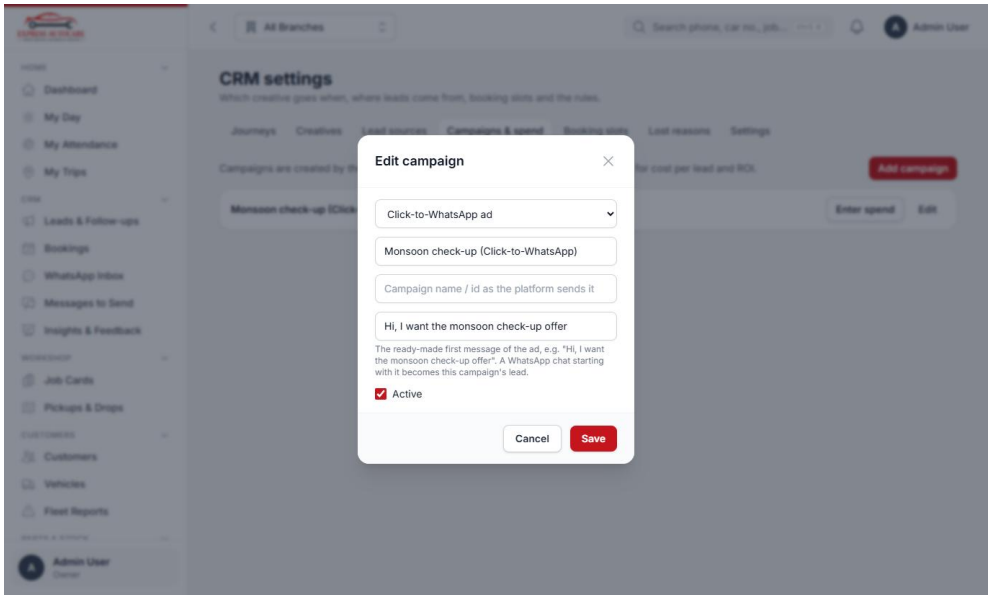

12.2 Lead sources and webhooks

Each source (Meta, Google, website…) has its own secret **webhook link**. Paste that link into Google Ads lead forms, or into Pabbly / Zapier / Make for Meta lead ads, and leads arrive in the CRM by themselves. Use **Test** to check it works.

Lead sources with their webhook links

Click-to-WhatsApp ads: an ad that opens WhatsApp with a ready-made first message (for example "Hi, I want the monsoon check-up offer"). In **Campaigns & Ad Spend**, open the campaign and type that message in **WhatsApp start text**. A chat that starts with it becomes this campaign's lead, so the campaign's leads and bookings are counted in Insights.

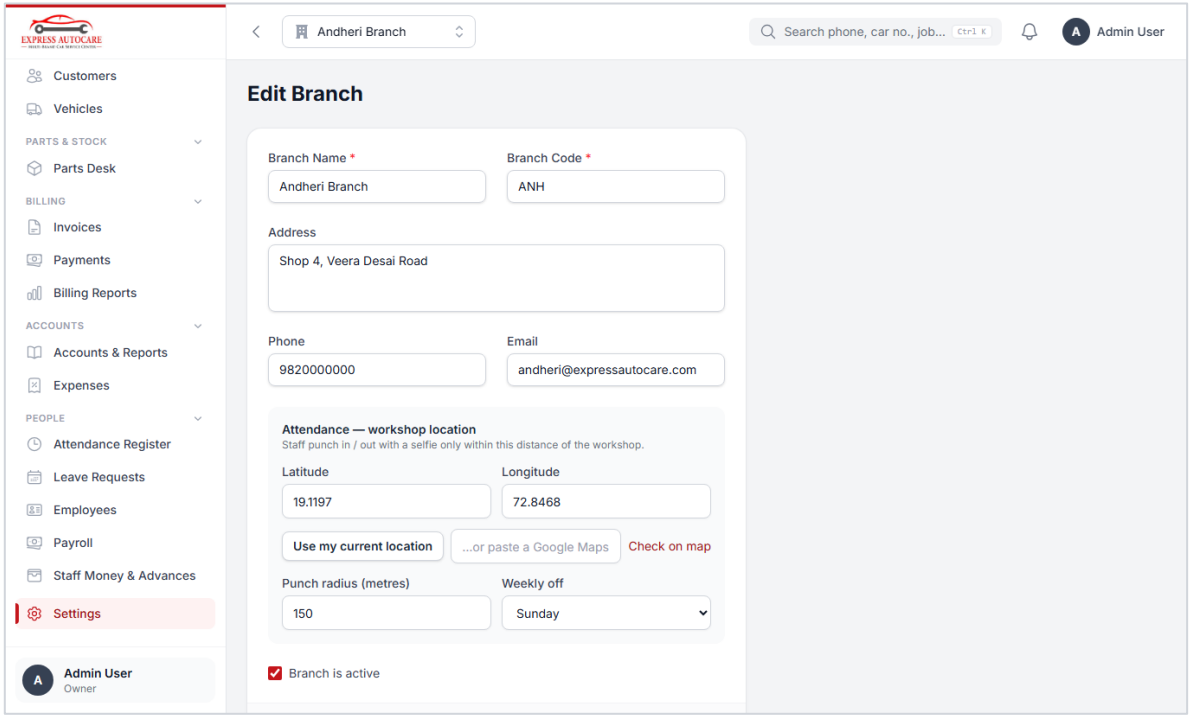

Campaign with its WhatsApp start text

12.3 Workshop location for attendance

1. Open **Settings › Branches** and edit the branch.

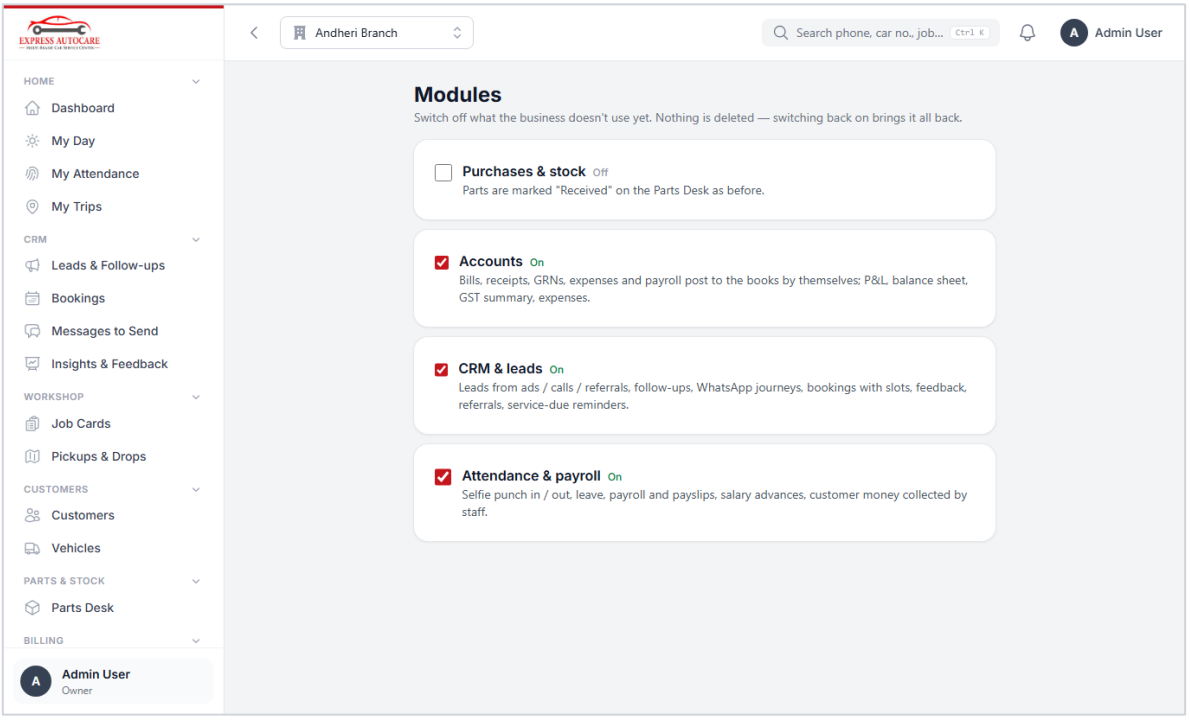

2. Under **Attendance — workshop location**, stand inside the workshop and tap **Use my current location** (or paste a Google Maps link).
3. Set the **Punch radius** in metres (for example 150) and the **Weekly off** day.
4. Tap **Check on map** to make sure the pin is right, then save.

Setting the workshop location and punch radius

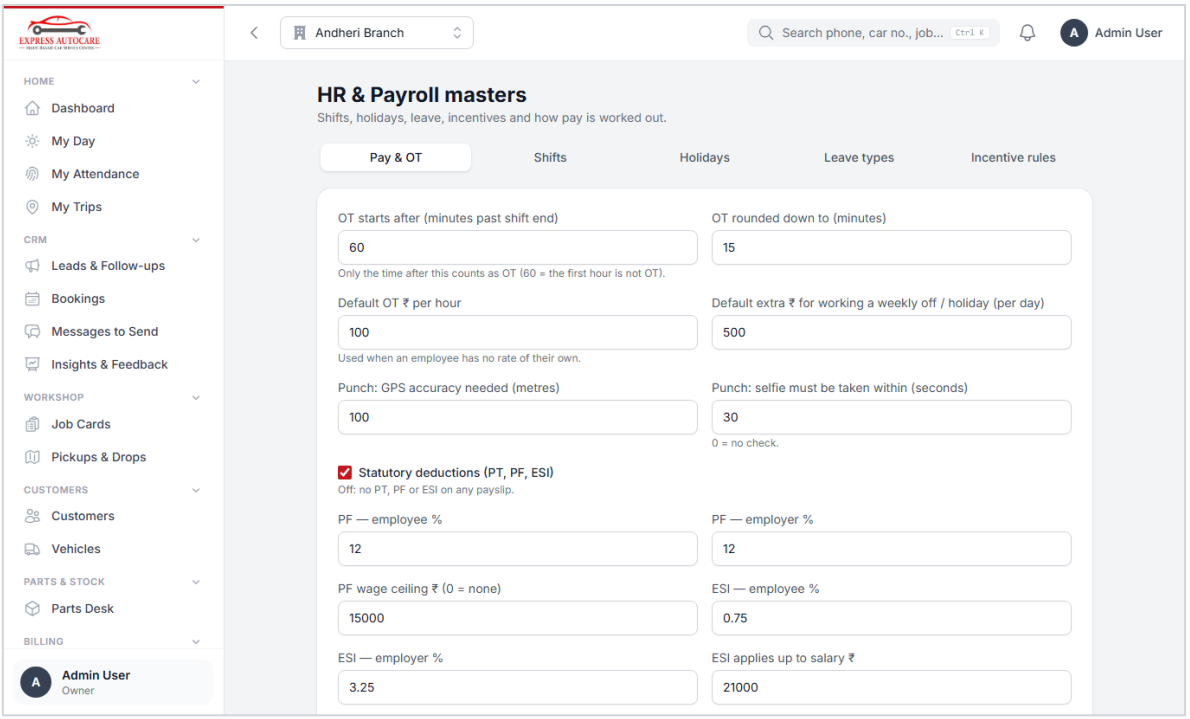

12.4 Switching modules on or off (owner)

In **Settings › Modules** the owner can switch **Purchases & stock**, **Accounts**, **CRM & leads** and **Attendance & payroll** on or off. When a module is off, its menus disappear and its automatic work stops; the rest of the system keeps working. **Nothing is deleted.** After switching Accounts back on, tap **Bring the books up to date** so the bills and payments made meanwhile are posted.

Settings › Modules

The HR & payroll masters (shifts, holidays, pay rules) are under *Settings › HR & Payroll*:

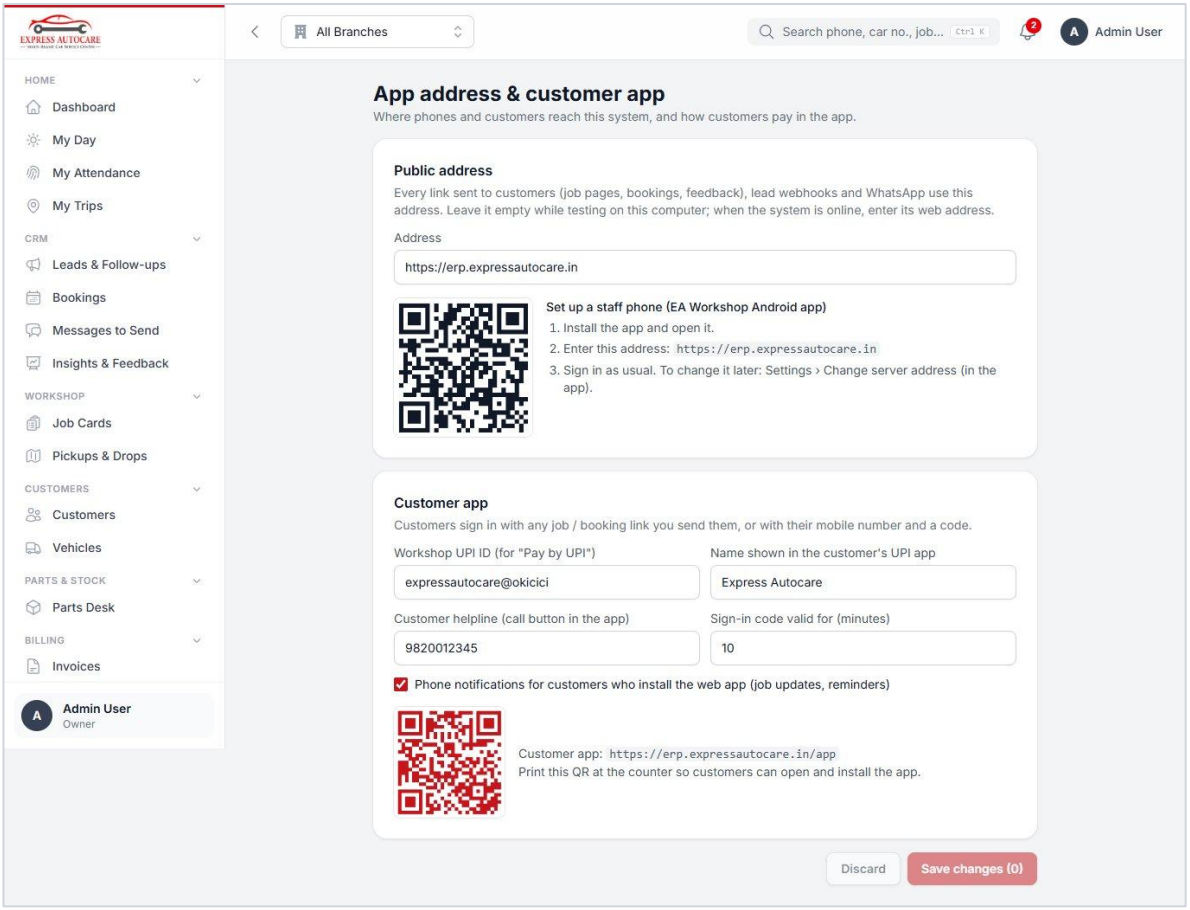

HR & payroll settings

12.5 App address and customer app (owner)

Settings › App Address & Customer App.

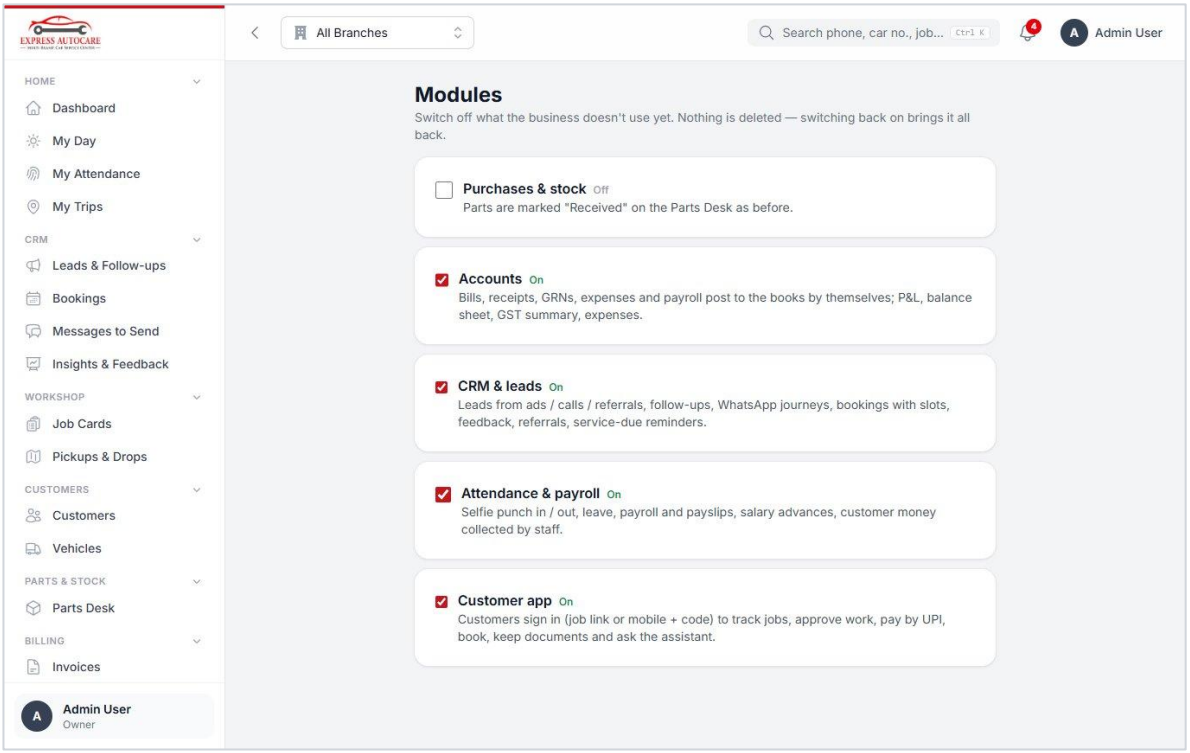

- **Public address:** the web address of the system. Every link sent to customers (job pages, bookings, feedback), lead webhooks and WhatsApp use it. Leave it empty while you are testing on one computer; enter it when the system is online.

- **Set up a staff phone:** the QR code and steps for the EA Workshop Android app (section 7.3).
- **Workshop UPI ID** and the **name** customers see in their UPI app, for "Pay by UPI" in the customer app.
- **Customer helpline:** the number behind the Call buttons in the customer app.
- **Sign-in code valid for:** how long a customer's sign-in code works (10 minutes by default).
- **Phone notifications:** customers who install the app get job updates and reminders as phone notifications.
- **Customer app QR:** print it at the counter so customers can open and install the app.

Settings › App Address & Customer App

The customer app itself can be switched off in **Settings › Modules** (12.4). Links sent on WhatsApp keep working either way.

Settings › Modules: the customer app can be switched off

Fleet cabs (same page): how much a fleet's driver may approve per job, and how close to its service (km) a cab gets before the owner and drivers are reminded (14).

12.6 WhatsApp & Interakt (owner)

Everything about WhatsApp is in one place in the CRM: **Settings › CRM › WhatsApp & Interakt** (it used to be Settings › WhatsApp). It has three tabs.

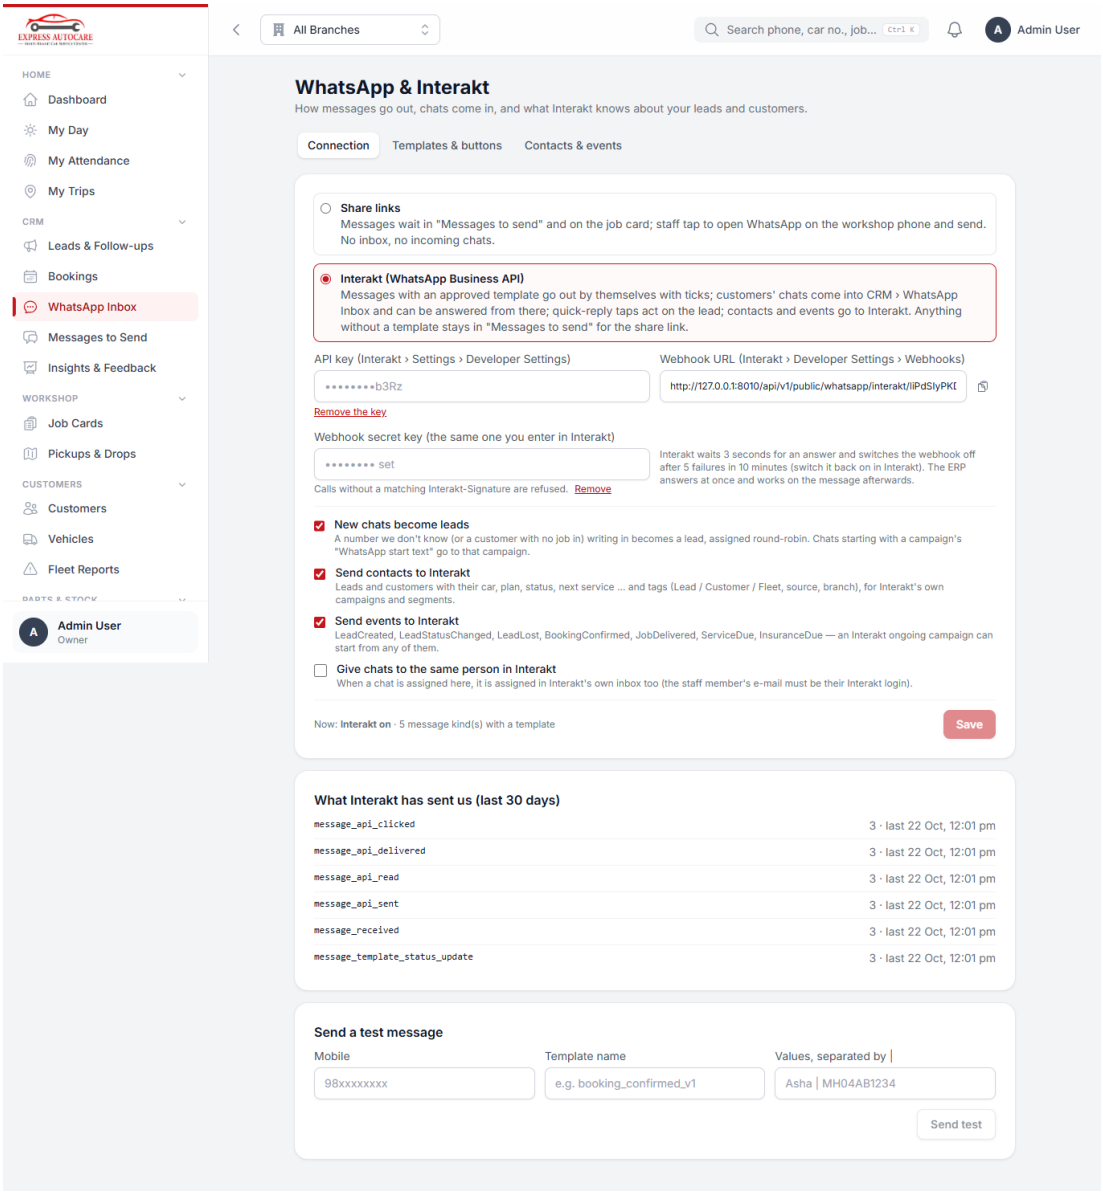

Connection

- **Share links** (the default): messages wait in Messages to Send and on the job card; staff tap them to send from the workshop phone. No inbox, no incoming chats.
- **Interakt** (WhatsApp Business API): messages with an approved template go out by themselves with ticks; customers' chats come into the WhatsApp Inbox (4.7); button taps act on leads; leads and customers are sent to Interakt. Anything without a template still waits in Messages to Send.

1. Open an Interakt account and connect the workshop's WhatsApp number. The API needs Interakt's **Growth** plan or above; incoming chats need its higher plan (**Advanced**; check with Interakt whether yours includes them).
2. In Interakt › Settings › Developer Settings copy the **API key** and paste it here.
3. Copy the **Webhook URL** shown here into Interakt's webhook settings, and type the same **secret key** in both places. Messages to the webhook without the right signature are refused.
4. Choose **Interakt**, tick the switches you want (below) and **Save**. Use **Send a test message** to check.

Switch	What it does
New chats become leads	Someone new writing in becomes a lead (round-robin), or the campaign's lead when the chat starts with its WhatsApp start text (12.2).
Send contacts to Interakt	Leads and customers go to Interakt with their details (car, plan, branch, lead status, last visit, next service due, fleet) and tags (Lead, Customer, Fleet, Corporate, lead source, branch), for Interakt's own campaigns and lists.
Send events to Interakt	LeadCreated, LeadStatusChanged, LeadLost, BookingConfirmed, JobDelivered, ServiceDue (7 days before), InsuranceDue (15 days before).
Give chats to the same person in Interakt	A chat given to someone here is also given to them in Interakt's own inbox. Their e-mail here must be their Interakt login.

The card **What Interakt has sent us** lists what has arrived in the last 30 days. If no "message_received" has ever come, Interakt is not sending customers' chats (usually the plan): the inbox then shows only what we send, the ticks and the button taps.

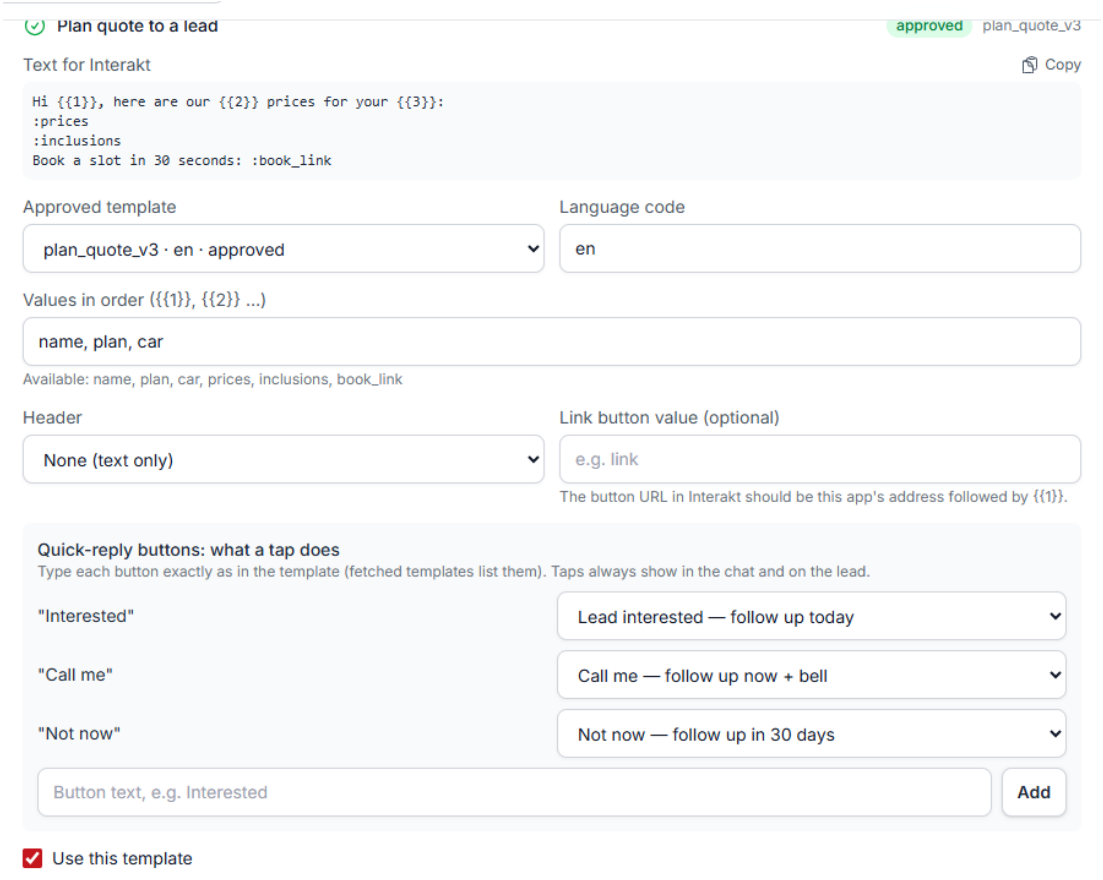

WhatsApp & Interakt › Connection

Templates & buttons

WhatsApp only lets a business start a conversation with a template that Meta has approved. For each message the system sends (job stages, estimate ready, payment received, quotes, bookings, creatives, the sign-in code, the fleet messages and the inbox's chat opener):

1. Open the message and tap **Copy** next to "Text for Interakt".
2. In Interakt create a template with that text: category **Utility** for job and booking updates, **Marketing** for prices, offers and creatives, **Authentication** for the sign-in code. Add quick-reply buttons if you want them (for example Interested / Call me / Not now).
3. When it is approved, tap **Fetch from Interakt**: the list of your templates comes in with their status. Pick the template for the message (or type its name), check the values in order and **Save templates**.

4. For each **quick-reply button**, choose what a tap does: lead interested, call me (bell), or not now (follow up in 30 days). Taps always show in the chat and on the lead.

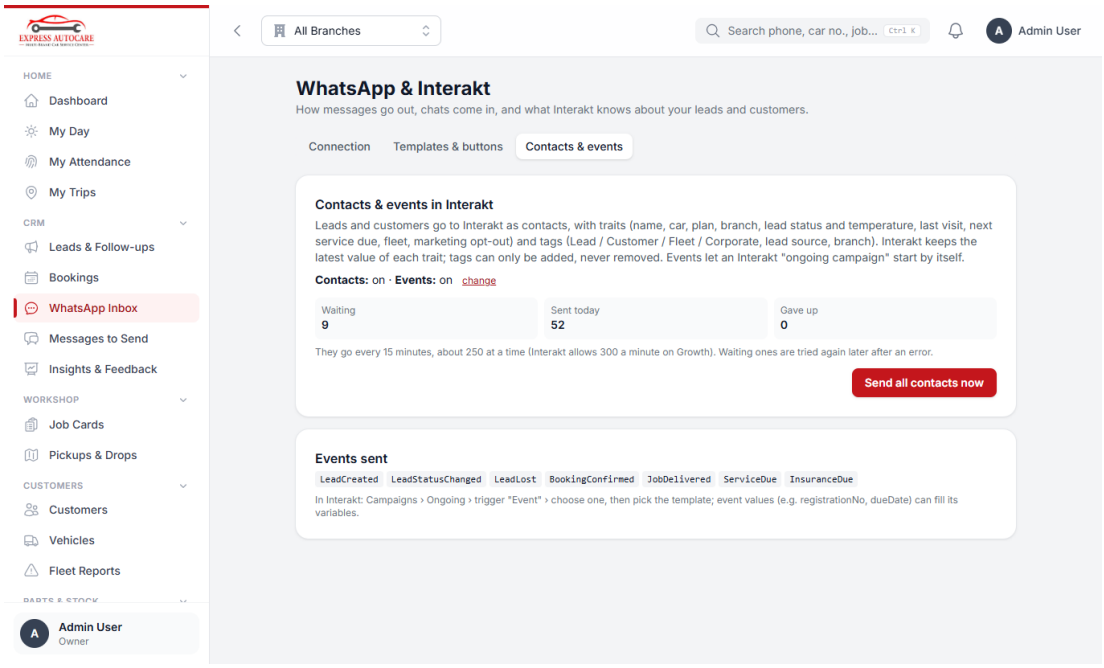

One message: its template, values and what its buttons do

> **Note** The badge shows the template's status from Interakt: approved, pending or rejected. When Meta rejects or pauses one, the owner gets a bell and that message goes by share link again. If "Fetch from Interakt" says it cannot fetch, type the names by hand: Interakt does not promise this list to every account.

Contacts & events

Shows how many contacts and events are waiting, sent today, and any errors. They go every 15 minutes, about 250 at a time (Interakt allows 300 a minute on Growth); if Interakt is busy they are tried again later. Tap **Send all contacts now** once after switching on, so Interakt has everyone.

To use an event in Interakt: **Campaigns › Ongoing campaign**, trigger **Event**, choose the event (for example ServiceDue) and the template. The event's values (registrationNo, dueDate, jobNo, amount…) can fill the template.

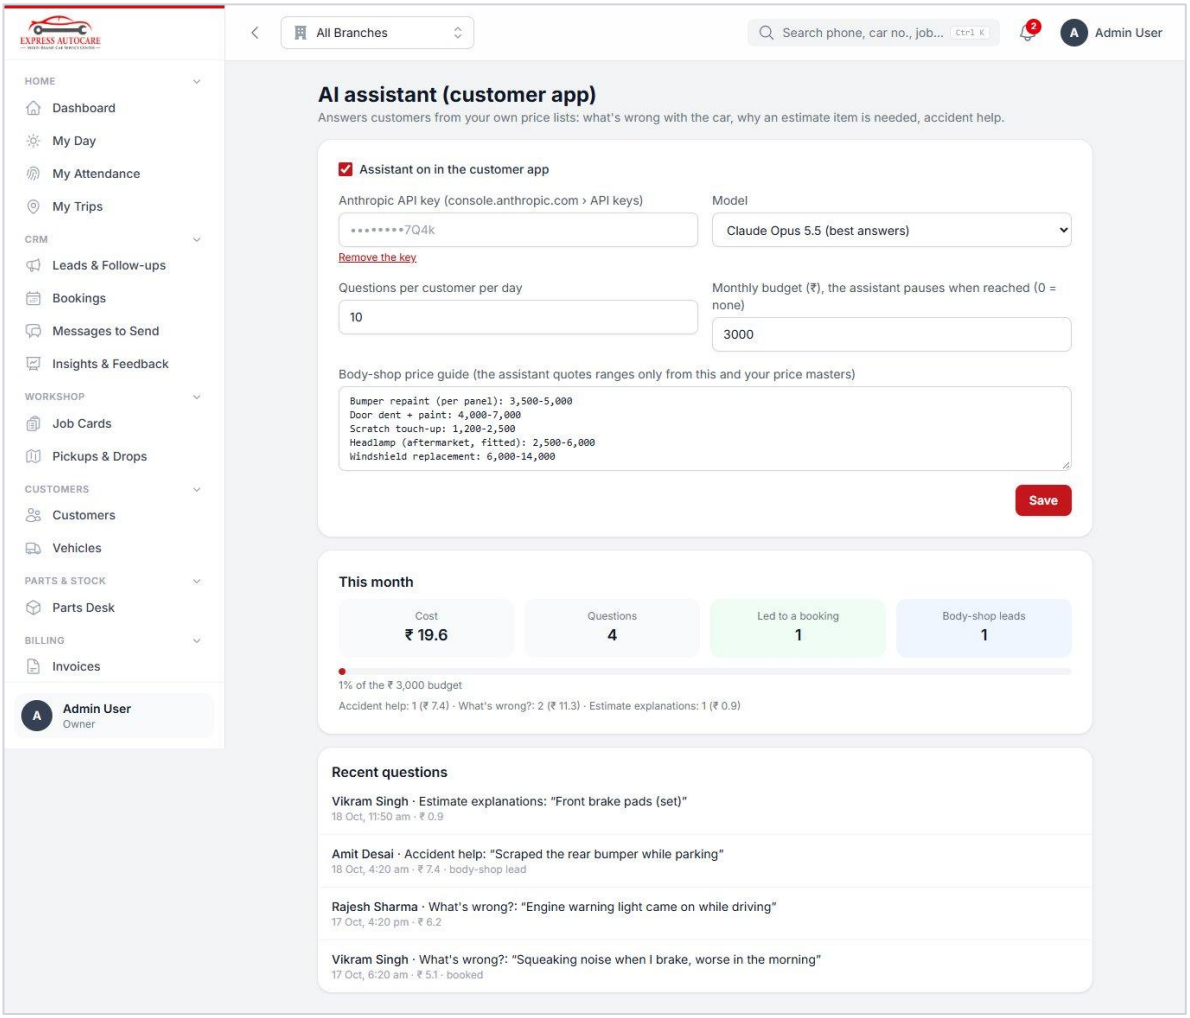

WhatsApp & Interakt › Contacts & events

> **Tip** Start with a few templates (estimate ready, ready for delivery, payment received, chat opener, the sign-in code). Everything else keeps working by share link. You can switch back to share links at any time.

12.7 AI assistant (owner)

Settings › AI Assistant turns on the assistant in the customer app (13.12). It stays off until you enter an **Anthropic API key** (from console.anthropic.com › API keys) and tick **Assistant on**.

- **Model:** Claude Opus 5.5 gives the best answers; Sonnet 5.5 costs about half; Haiku 5.5 is the cheapest.
- **Questions per customer per day** (10 by default). Explanations of estimate items don't count and are written once per item.
- **Monthly budget (₹):** the assistant pauses for the rest of the month when the cost reaches it, and customers see "please call us".
- **Body-shop price guide:** the rough ranges the assistant may give for accident damage. It quotes only from this, your plan prices and the labour charges master.
- **This month:** cost, questions, how many led to a booking, body-shop leads, and the recent questions with what was answered.

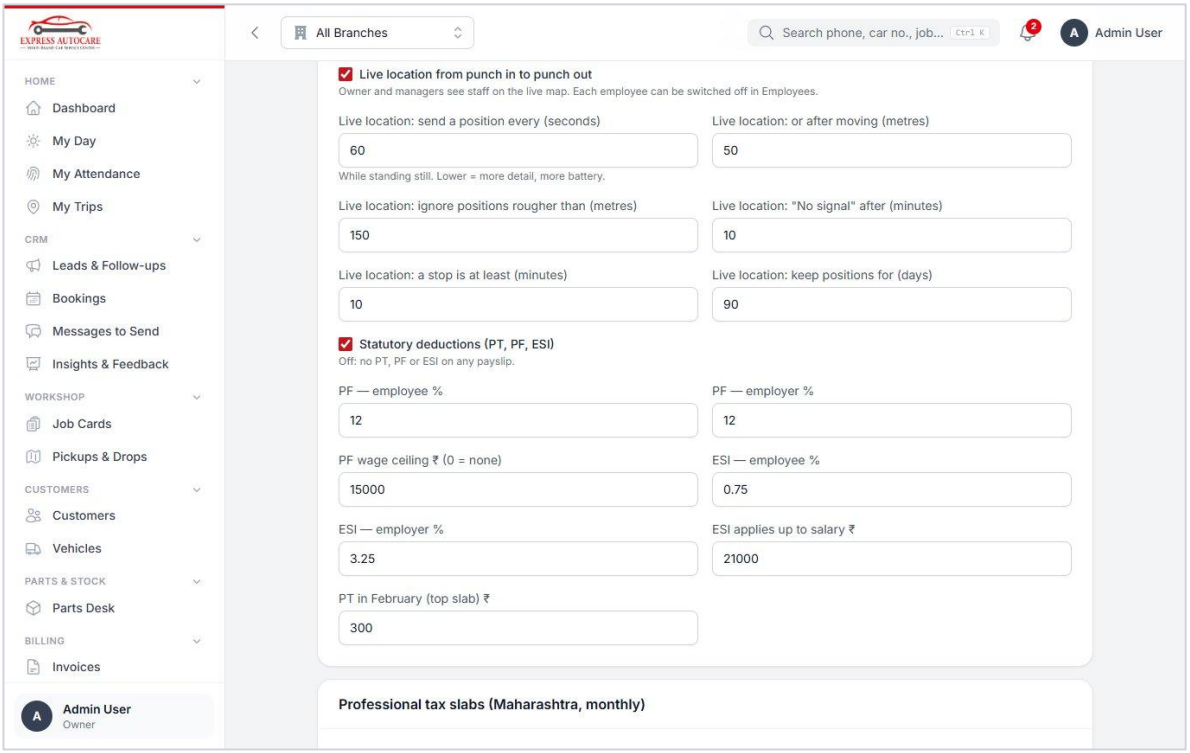

Settings › AI Assistant

> **Note** Rough cost per question with one photo: about ₹4–8 on Opus 5.5, ₹2–4 on Sonnet 5.5, under ₹0.50 on Haiku 5.5. The real figures show on this page.

12.8 Live location settings (owner, managers)

Settings › Pay, OT, Statutory & Live Location (HR & Payroll) has the live-location switches: on / off for everyone, how often the phone sends its position (every 60 seconds or after 50 metres), positions rougher than 150 metres ignored, "No signal" after 10 minutes, a stop after 10 minutes in one place, and positions kept for 90 days.

Live location settings

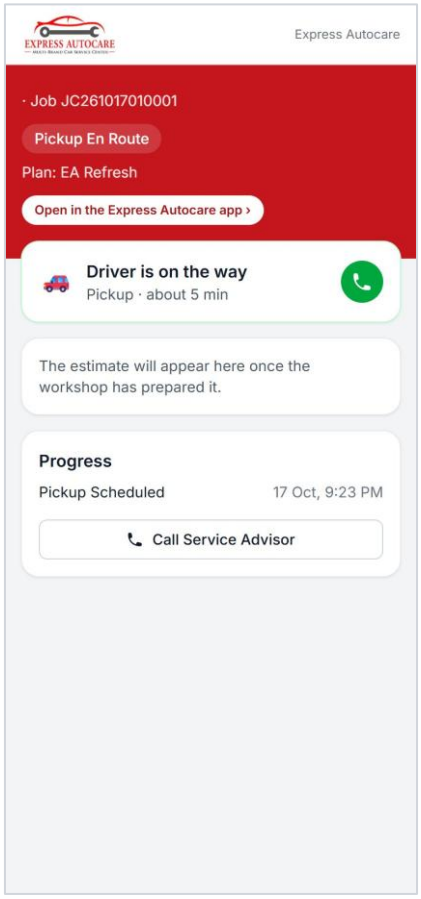

13. The customer app

Customers have their own app: **Express Autocare**, at the system's address followed by **/app** (for example https://erp.expressautocare.in/app). It works in any phone's browser and can be installed like an app; an Android app for the Play Store follows when the system is online. This chapter shows what customers see, so you can help them, and what staff do behind it.

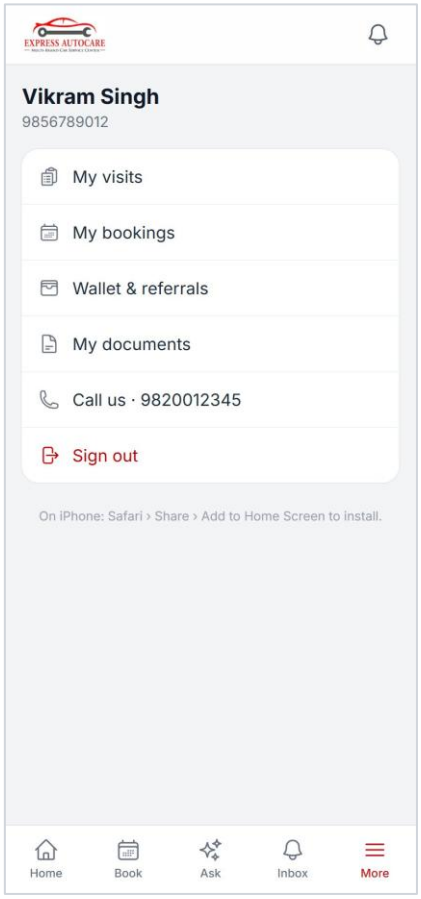

In the app	What the customer can do
Home	Jobs in progress and what needs them, their cars with service, insurance and PUC dates
Job	Live stages, photos and videos, approve or decline each item, "Why is this needed?", the bill and report, the driver on a map, pay by UPI
Service book	Every visit of each car, work recommended earlier, history PDF for resale
Book	A plan at their car's own price, or a repair; pickup, home or drive-in; a free slot
Inbox	Job updates, payments, reminders for service, insurance, PUC and documents
Wallet	Credit for the next visit and the referral link
Documents	Insurance, PUC, RC and licence with expiry reminders
Ask	The AI assistant: what's wrong with my car, accident help

13.1 How customers get the app

- Every job page sent on WhatsApp has the button **Open in the Express Autocare app**. Tapping it signs them in and opens that job.
- The counter QR (Settings › App Address & Customer App) opens the app; on Android Chrome they tap **Install**, on iPhone Safari › Share › **Add to Home Screen**.
- Later: the Android app on the Google Play Store, "Express Autocare".

The WhatsApp job page with "Open in the app"

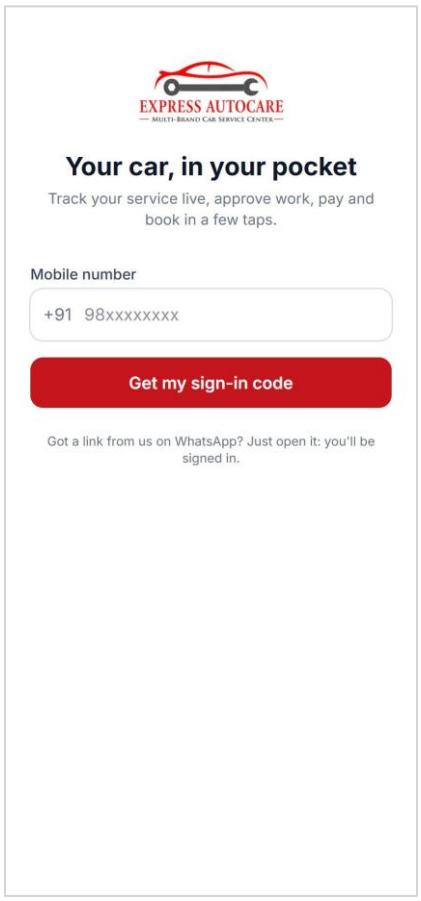

More: install, call us, sign out

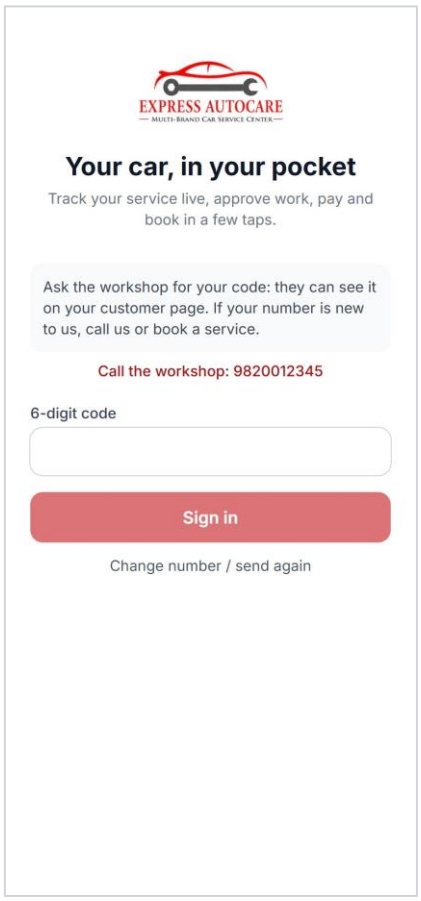

13.2 Signing in

Customers have no password. They sign in in one of two ways:

1. Open any link the workshop sent them on WhatsApp (job page, booking, feedback): they are signed in at once and stay signed in on that phone.
2. Or enter their mobile number and tap **Get my sign-in code**. While Interakt is off, the code is not sent by WhatsApp: the customer is told to ask the workshop.

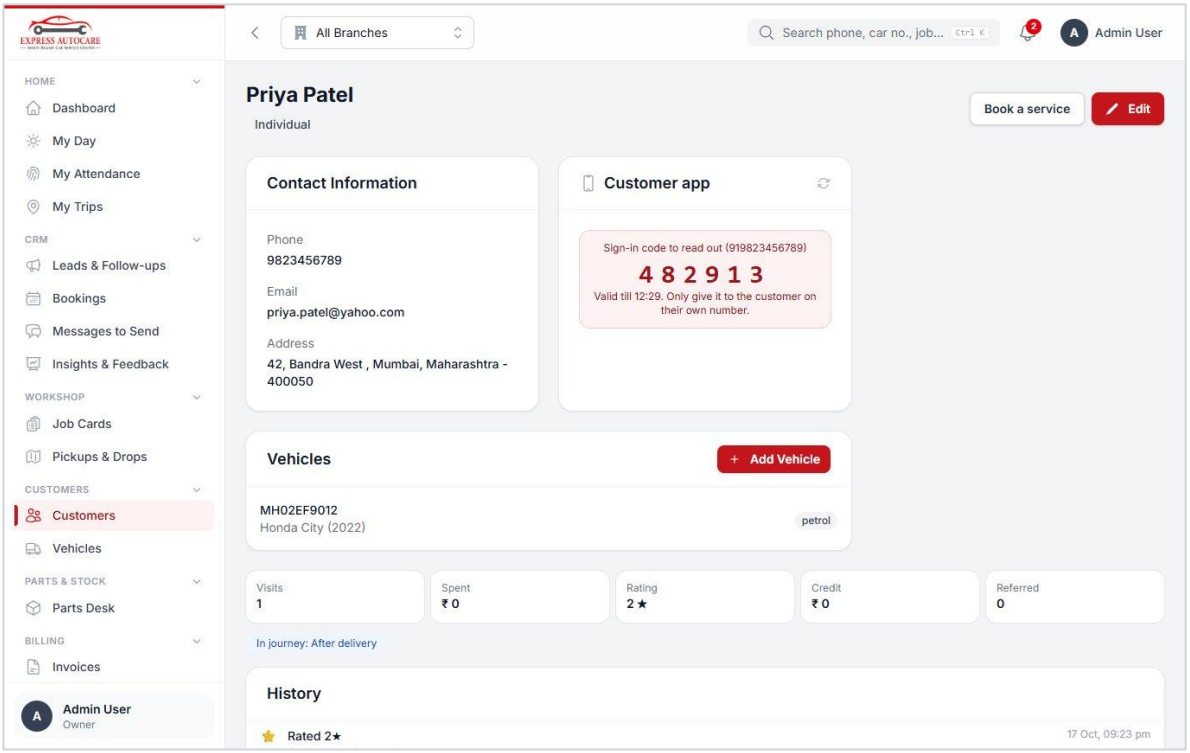

Sign in with the mobile number

Waiting for the code

Staff: reading out a code. The advisor of the customer's latest job gets a bell. Open the customer (Customers › the customer): the **Customer app** card shows the 6-digit code and how long it is valid. Read it to the customer on the phone.

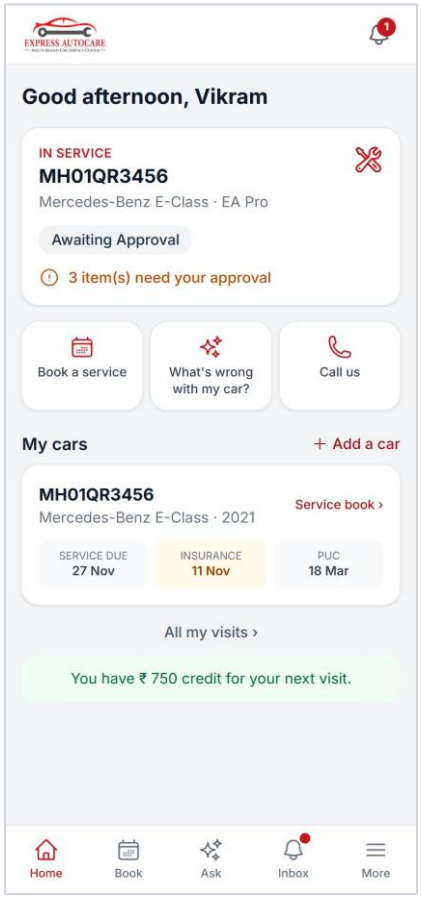

The customer's page: the sign-in code to read out

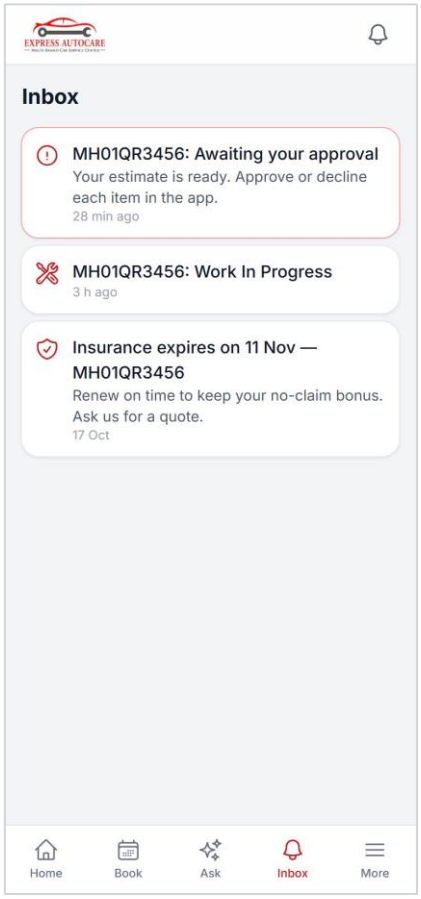

> **Careful** Give the code only to the customer, on the mobile number in their record. It works once and for 10 minutes. With Interakt on and the sign-in template approved, the code goes to their WhatsApp instead.

13.3 Home

Jobs in progress come first, with what needs the customer: items to approve, a balance to pay, or "Our team is on the way". Below are quick actions and their cars with the next service, insurance and PUC dates (yellow when close).

Home

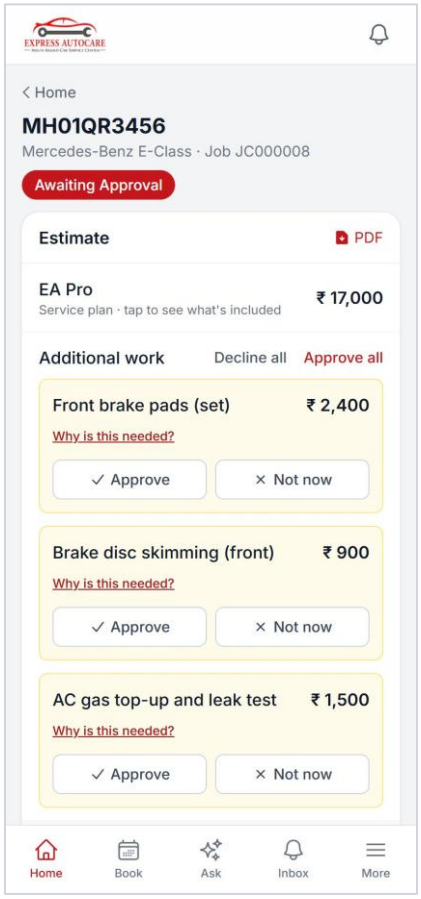

Inbox: updates and reminders

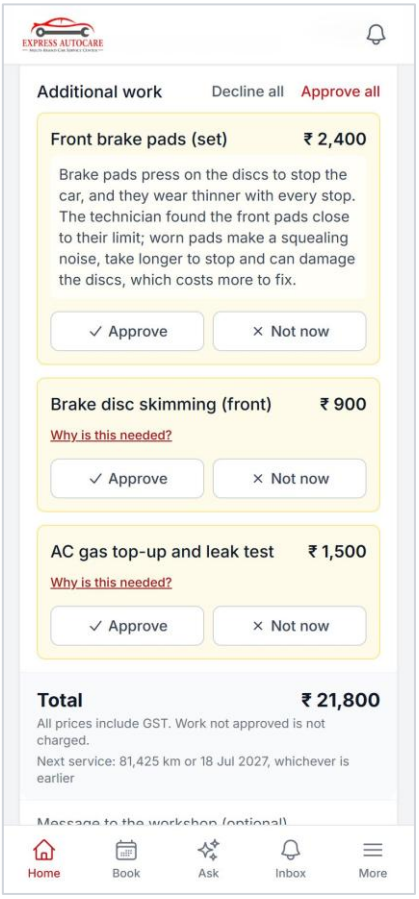

13.4 Following a job and approving work

Tapping a job opens the same job page as the WhatsApp link: the stage, the estimate, photos and videos section by section, the report and the bill. For each extra item the customer taps **Approve** or **Not now**, then **Send**. Their answers reach the advisor exactly as from the WhatsApp page.

When the assistant is on, each extra item has **Why is this needed?**: two or three plain sentences about what the part or job does and what happens if it is left. It is written once per item and never mentions prices.

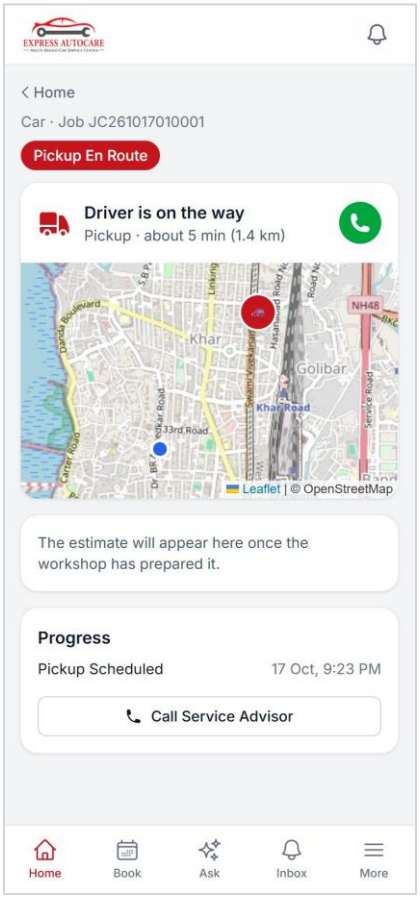

A job in the app

Approve each item; "Why is this needed?"

13.5 The driver on the way

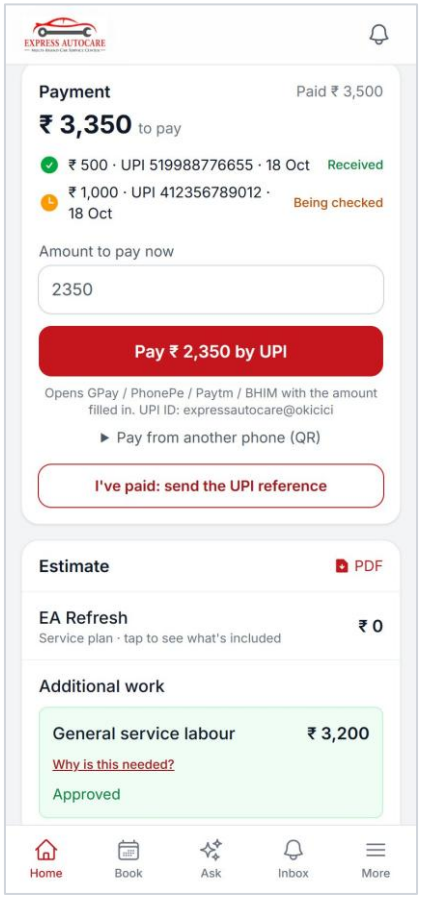

While a pickup, drop or home visit is on the way, the job shows the driver or technician on a map with the distance and a rough arrival time, and a Call button. It shows only while the trip is on the way and the phone has shared a position in the last 10 minutes; the WhatsApp page shows the same without the map.

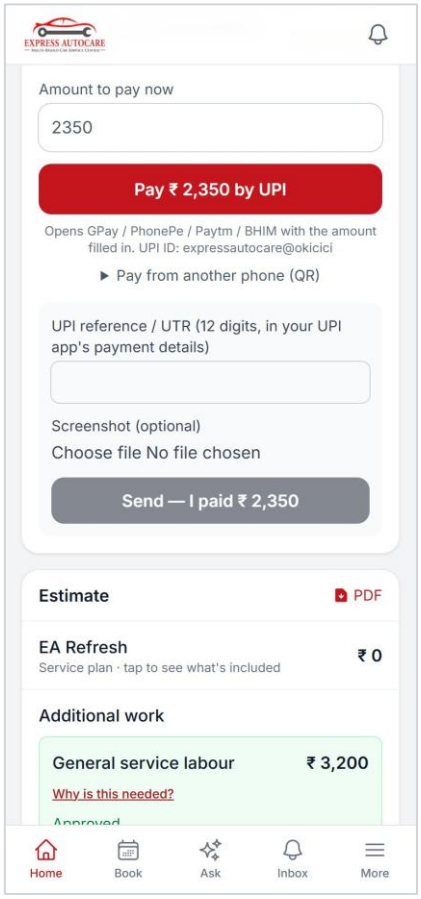

Driver on the way, live

13.6 Paying by UPI

1. On the job, the **Payment** card shows the balance. The customer changes the amount if paying part, and taps **Pay ₹… by UPI**: GPay, PhonePe, Paytm or BHIM opens with the workshop's UPI ID and the amount filled in. From another phone they scan the QR.
2. After paying, they tap **I've paid: send the UPI reference**, type the 12-digit reference (in their UPI app's payment details) and optionally add a screenshot.
3. It shows "Being checked" until back office confirms it (section 9.5), then "Received". If it is rejected, the reason shows and they are asked to call.

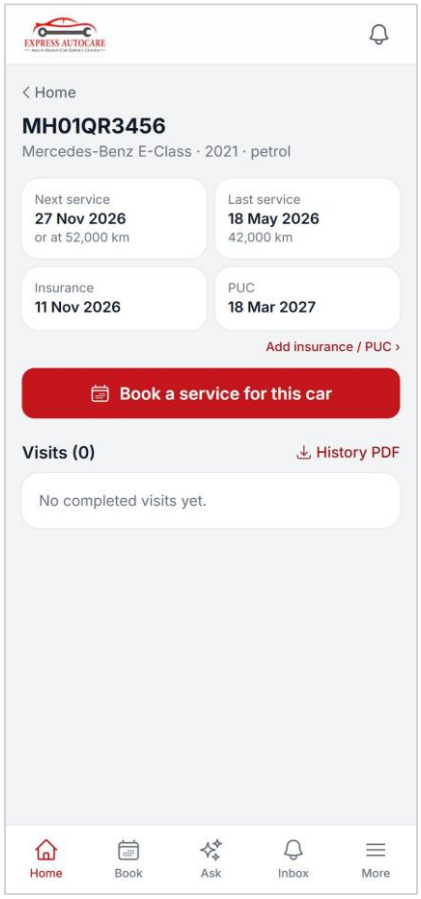

Pay by UPI

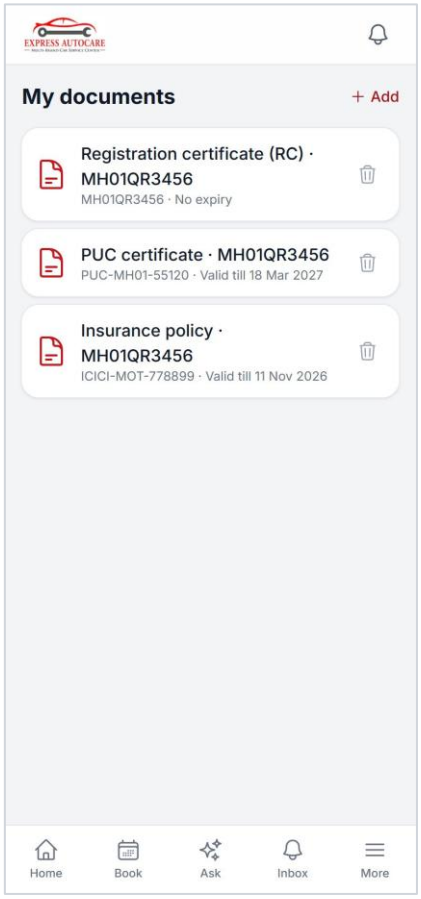

Sending the UPI reference

13.7 Service book

Home › a car › Service book: the next service by date and kilometres, the last service, insurance and PUC, every completed visit (tap one for its report, bill and photos), and work recommended on earlier visits that is still pending. **History PDF** downloads the whole history, which helps when selling the car.

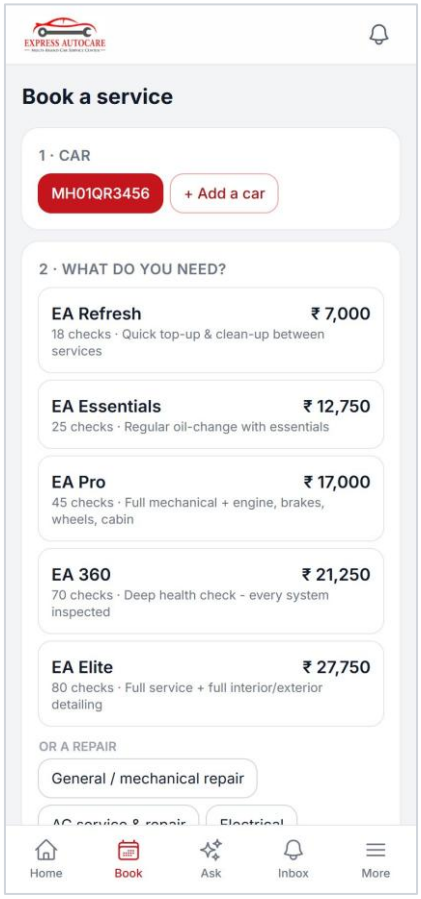

Service book

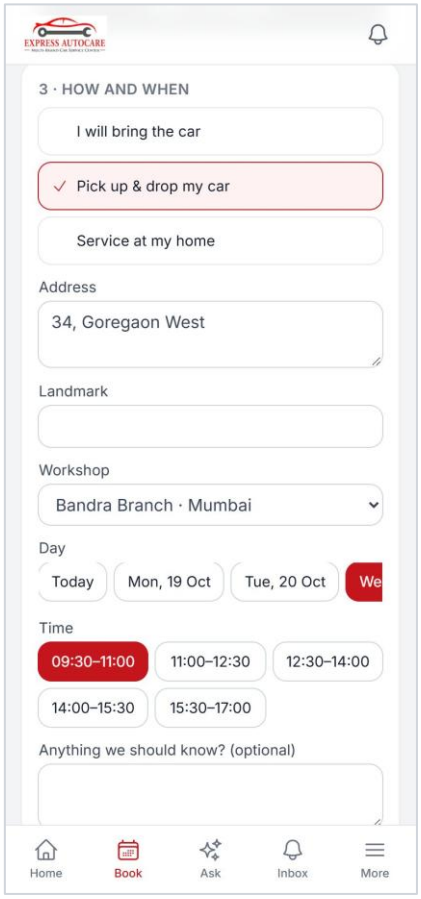

Documents

13.8 Booking a service

1. Choose the car (or add one: registration number, make and model).
2. Choose a plan, shown at **that car's own price** with the oil grades, or a repair type.
3. Choose how (bring the car, pickup & drop, service at home, with the address), the day and a free time slot. Add a note if needed and tap **Book**.

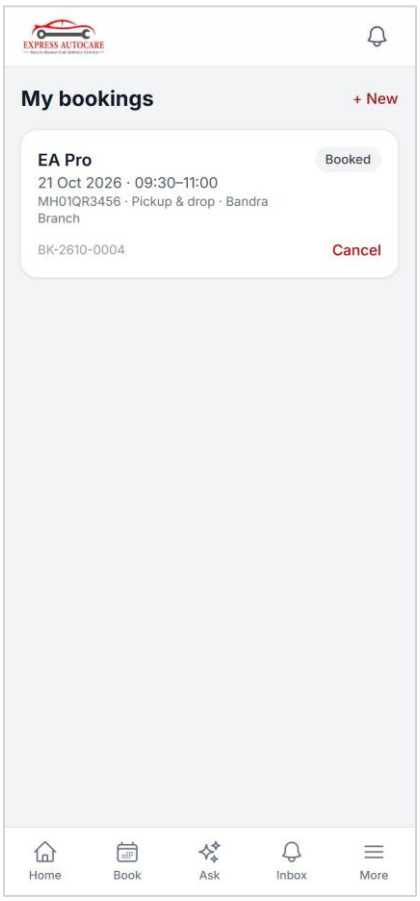

Plans at the car's price

How and when

The booking arrives in **CRM › Bookings** marked "Booked online", and the booking desk gets a bell to **call and confirm**, as with bookings from a WhatsApp link. The customer sees it under **My bookings** and can cancel it there before the day.

My bookings

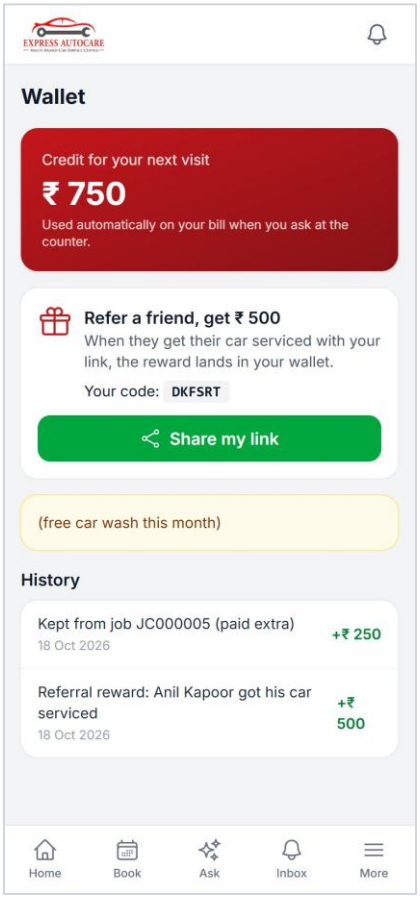

13.9 Inbox and reminders

- Job updates: the stages ticked in Job Stages, plus "awaiting your approval", "ready", "on the way" and "delivered".
- Payments: received, or not found.
- Reminders, once each: service due (3 weeks, 1 week and on the day), insurance and PUC (30 and 7 days before), documents in the locker, and work recommended 30 and 90 days ago.

Customers who install the app and allow notifications get these on the phone as well. WhatsApp messages continue as before.

13.10 Wallet and referrals

The wallet shows the customer's credit for the next visit (money kept from an overpayment, referral rewards) with its history, their referral code and a **Share my link** button for WhatsApp, and the current offer from the CRM settings. Credit is used at the counter as before (payment method "Customer credit").

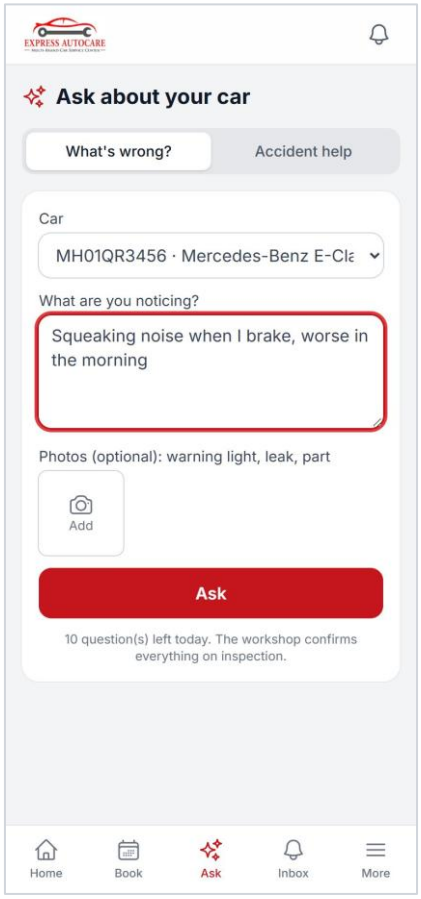

Wallet and referral

13.11 Documents

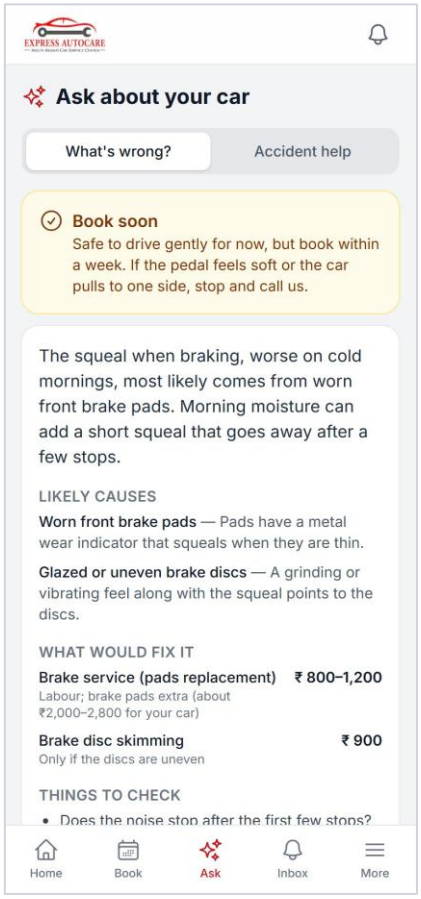

Customers keep their insurance policy, PUC, RC and licence in the app as a photo or PDF, with the number and the expiry date. Adding insurance or PUC also updates the car's dates, and reminders come before they expire. Staff see the same documents on the customer's page (Customer app card).

13.12 The assistant (when switched on)

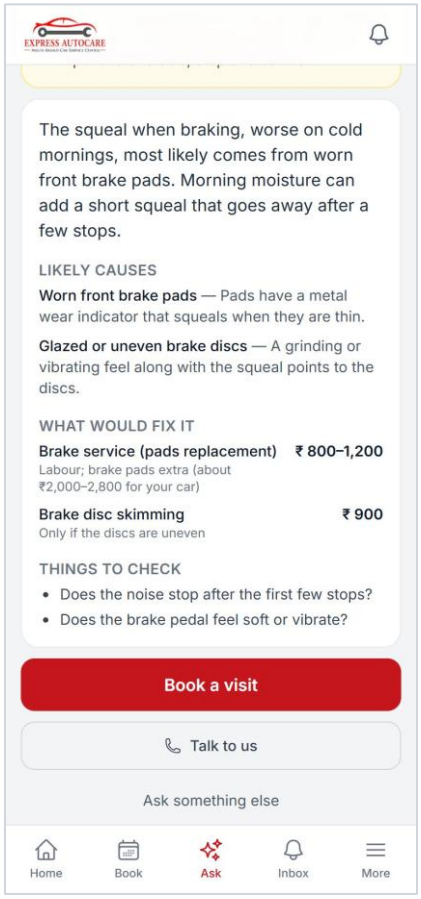

What's wrong? The customer describes the problem and can add up to three photos (a warning light, a leak). The answer shows how urgent it is, the likely causes, which of your services would fix it with price ranges from your price lists, and things to check. **Book a visit** opens the booking with the assistant's summary in the notes for the advisor.

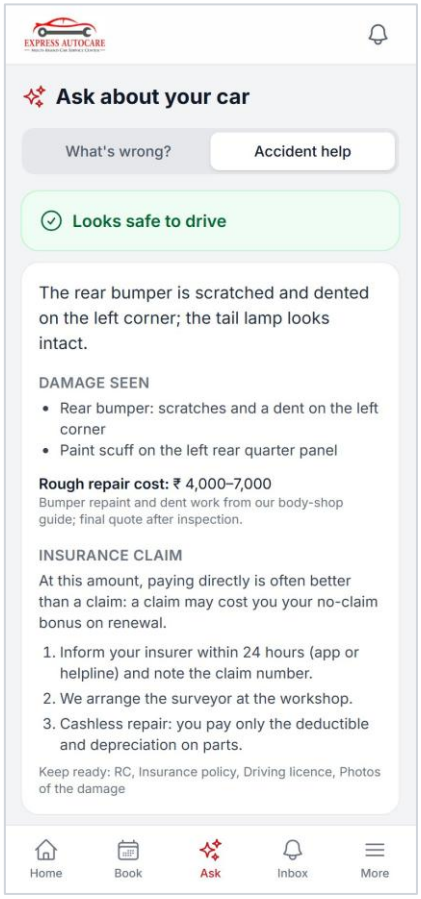

Asking the assistant

Urgency and likely causes

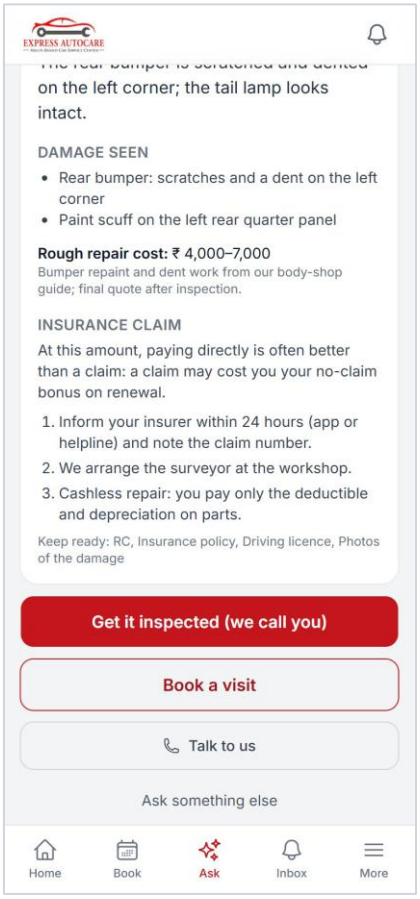

What would fix it, with price ranges

Accident help

Accident help: photos of the damage and what happened. The answer lists the damage, a rough repair range from the body-shop guide, whether it looks safe to drive, whether a claim is worth it, the claim steps and the documents needed. **Get it inspected** creates a body-shop lead for your team to call.

Claim advice and steps

> **Careful** The assistant gives likely causes and price ranges, never a diagnosis or a quote. For brakes, steering, overheating, smoke, a fuel smell or a flashing engine light it tells the customer to stop driving and call you. The final word is always the workshop's inspection.

13.13 What staff do

When	Who	What to do
A customer asks for a sign-in code	Advisor (bell)	Customers › the customer › Customer app card: read out the code (13.2)
"UPI payment to confirm"	Back office (bell)	Billing › UPI Payments to Confirm: check the bank, Confirm & record or Reject (9.5)
"Booked online"	Booking desk (bell)	CRM › Bookings: call the customer to confirm, as for web bookings
A body-shop lead from the app	Body-shop advisor	Call the customer; the assistant's summary is on the lead
A customer asks "why do I need this?"	Advisor	They can tap "Why is this needed?" on the estimate, or ask you

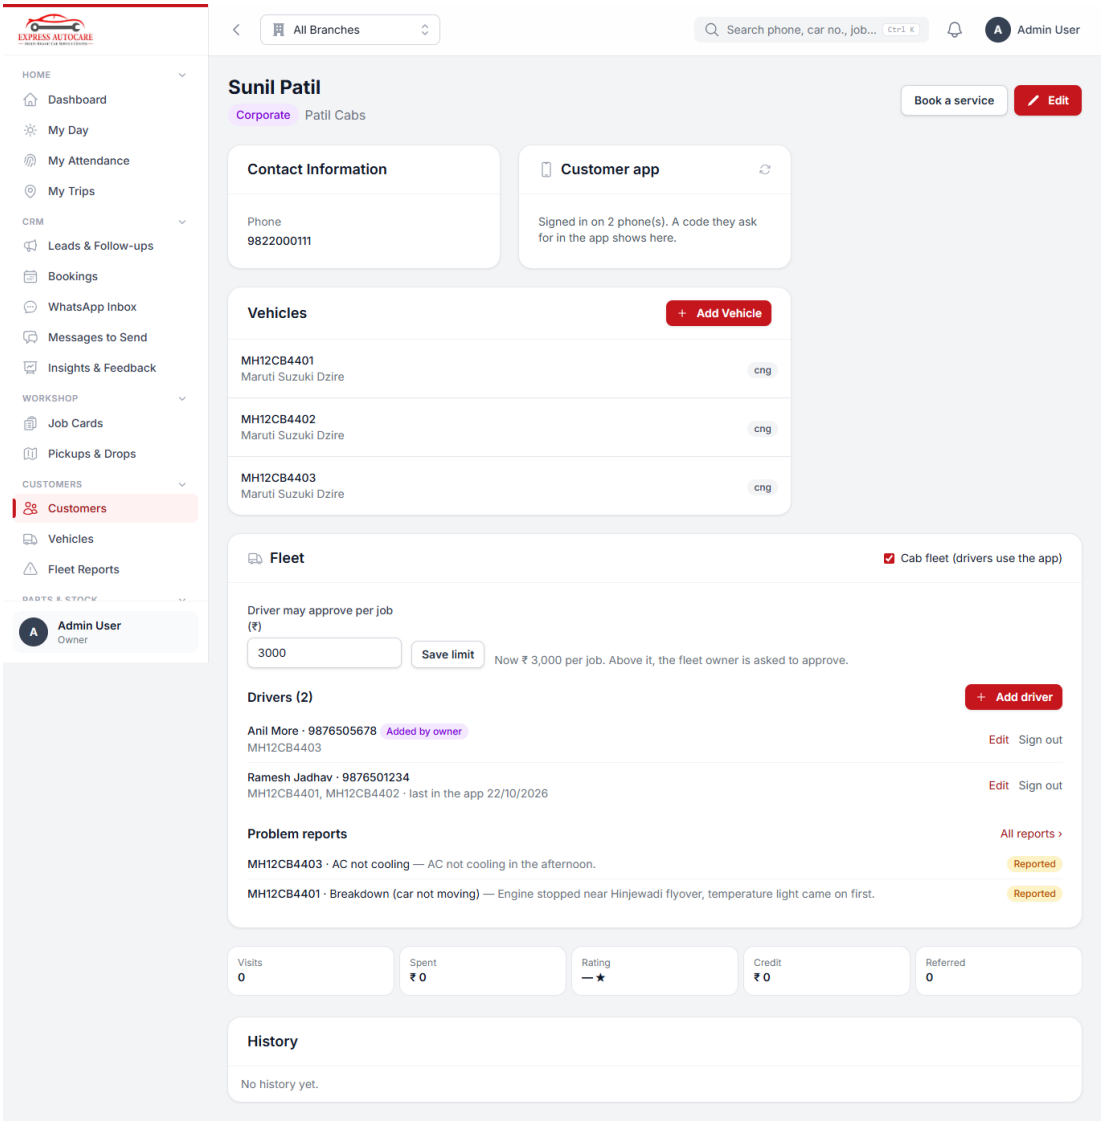

Connects to CRM (bookings, leads, referral), Workshop (job page, estimates), Trips (driver on the way), Billing (UPI payments), Settings (12.5–12.7).

14. Fleet cabs and drivers

Cab owners send their cabs to us all the time, usually with a driver. In the ERP a cab owner is a **fleet**: their drivers use the customer app too, see only their own cabs, report problems, log the km and can approve extra work up to a limit. The owner sees all cabs on one **fleet dashboard**. Fleets pay per job like any customer. The feature can be switched off in **Settings › Modules › Fleet cabs & drivers**.

14.1 Making a customer a fleet (advisors, managers)

1. Open the customer (Customers). Add each cab as a vehicle.
2. On the **Fleet** card tick **Cab fleet (drivers use the app)**.
3. Tap **Add driver**: name, mobile number and the cabs they drive. The fleet owner can also add drivers in the app.
4. If this fleet needs a different approval limit, type it in **Driver may approve per job** and **Save limit**. Empty = the default (12.5).

The Fleet card on the customer page: limit, drivers, problem reports

Edit a driver to change their cabs or switch them off (this signs them out of the app). **Sign out** signs them out of every phone (a lost phone). A sign-in code a driver asks for shows on this customer's **Customer app** card with the driver's name.

14.2 The driver's approval limit

A driver can approve extra work on the estimate up to a **total per job** (₹, GST included). The default is in **Settings › App Address & Customer App › Fleet cabs**; a fleet can have its own on its Fleet card.

- Approvals within the limit go through at once, marked "By driver …" on the estimate.
- Anything above the limit stays waiting for the **fleet owner**: they get a note in the app and a WhatsApp message (in Messages to Send, or by itself with Interakt), and the advisor gets a bell.
- A driver may decline items. They cannot change what the owner has already decided; the owner can change anything, with no limit.

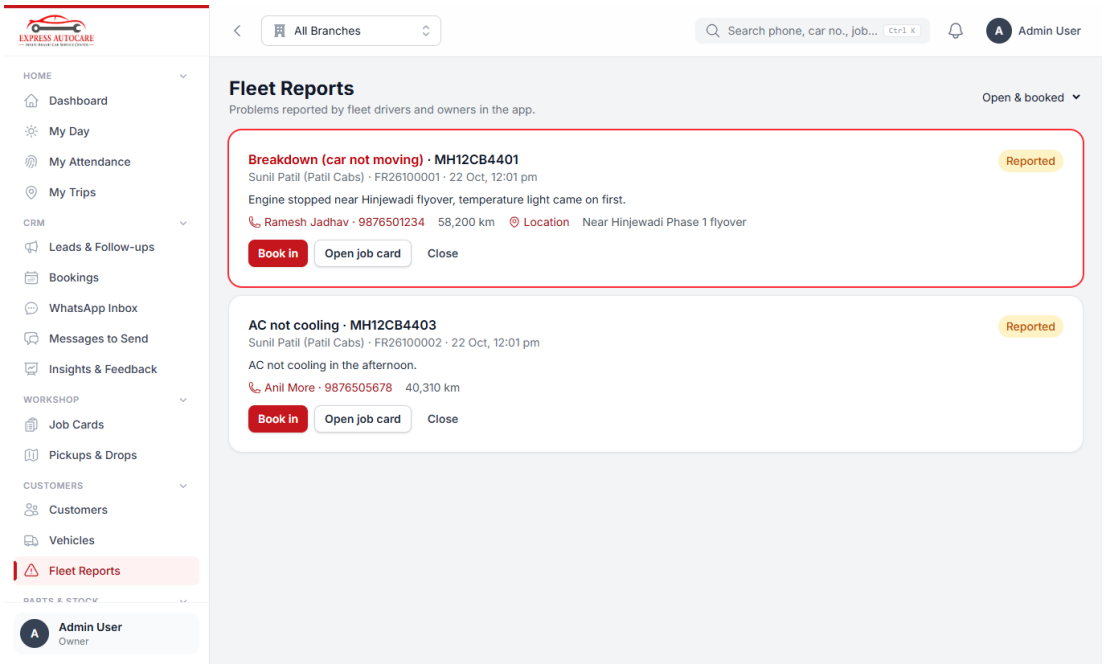

14.3 Job cards for fleet cabs

On the job card form, a fleet's cab shows **Driver who brought the cab** (the cab's own driver is chosen for you). That driver gets the job's stages in the app, and a WhatsApp "cab ready" message with their own link when the cab is ready. The job card shows the driver's name and number next to the customer.

14.4 Fleet reports (advisors, managers)

Problems drivers report from the app arrive in **Customers › Fleet Reports**, breakdowns first (red), with photos and videos, km and, for a breakdown, the cab's location on the map. You get a bell.

- **Book in**: drive-in, pickup from where the cab stands, or on-site; choose the day and slot. The driver and the owner are told.
- **Open job card**: the form opens with the fleet, the cab and the driver filled in. A job card opened for the cab picks up its open reports by itself.
- **Close**: with a note they see (for example "Solved on the phone").

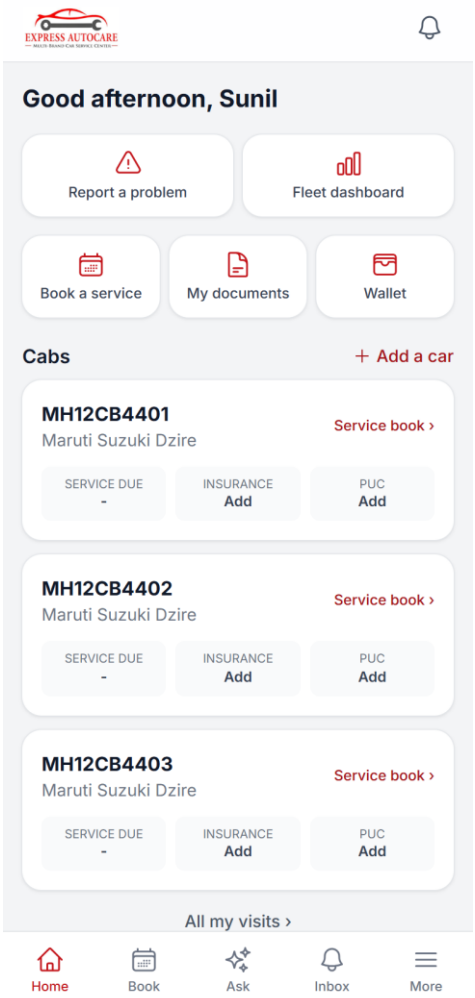

Customers › Fleet Reports

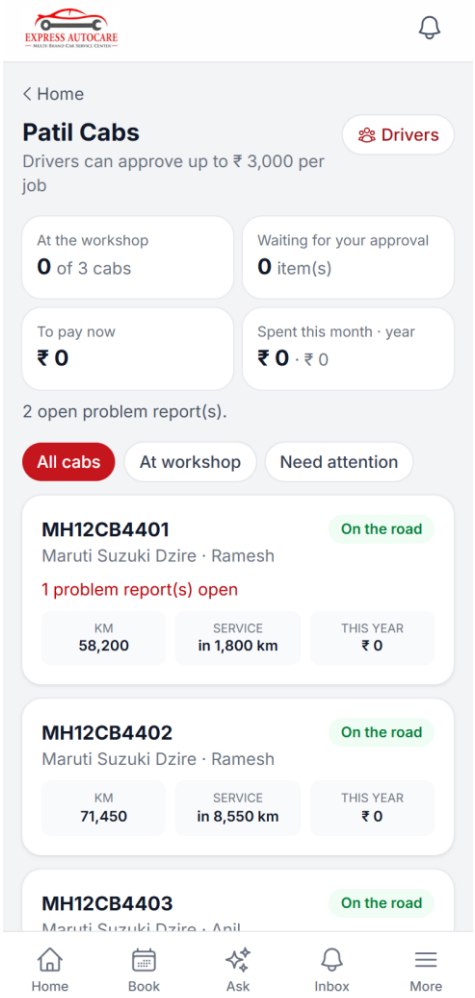

14.5 In the customer app: the fleet owner

The owner signs in with their own number as before. Their app gets **Fleet dashboard** and **Drivers** (also in More):

- **Fleet dashboard**: every cab, at the workshop (stage, items waiting for approval, money to pay) or on the road (km, next service, open problems); totals for the month and year, and spend per cab. Filters: All cabs, At workshop, Need attention.
- **Drivers**: add a driver with their mobile number and cabs, switch one off, or sign them out of all phones.

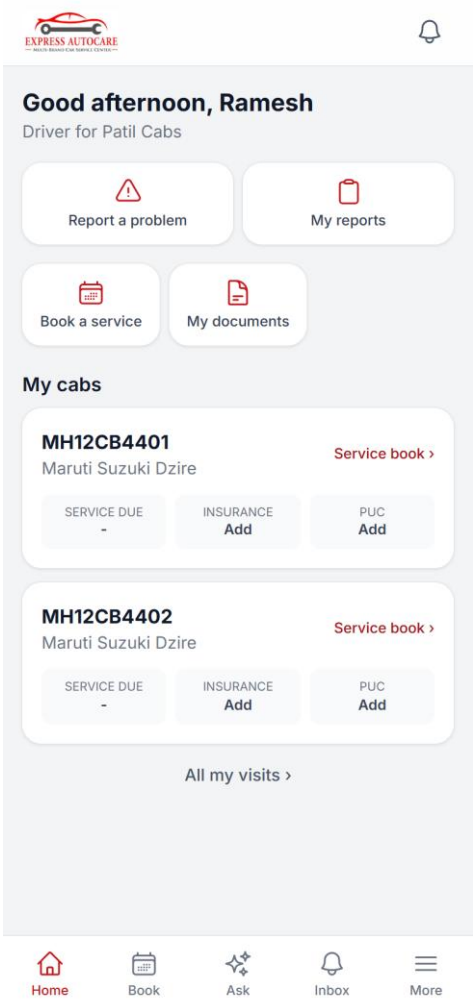

Owner: Home with Report a problem and Fleet dashboard

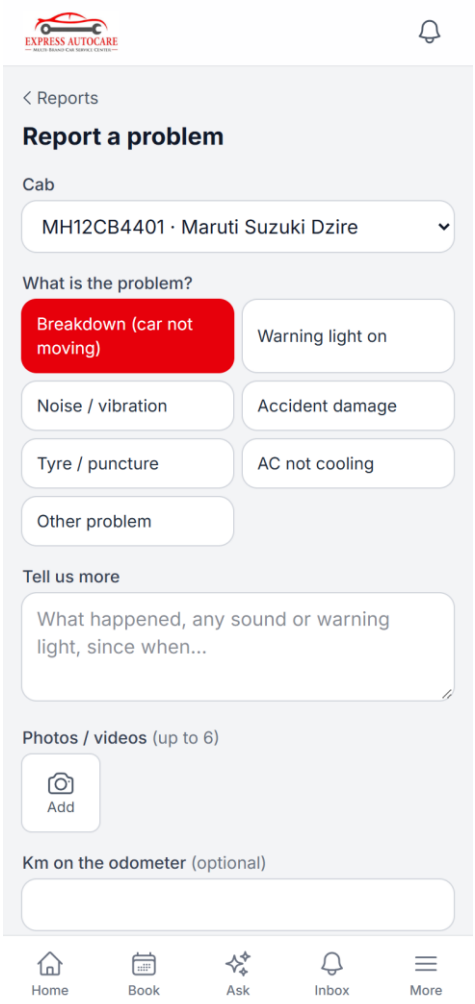

Fleet dashboard

14.6 In the customer app: drivers

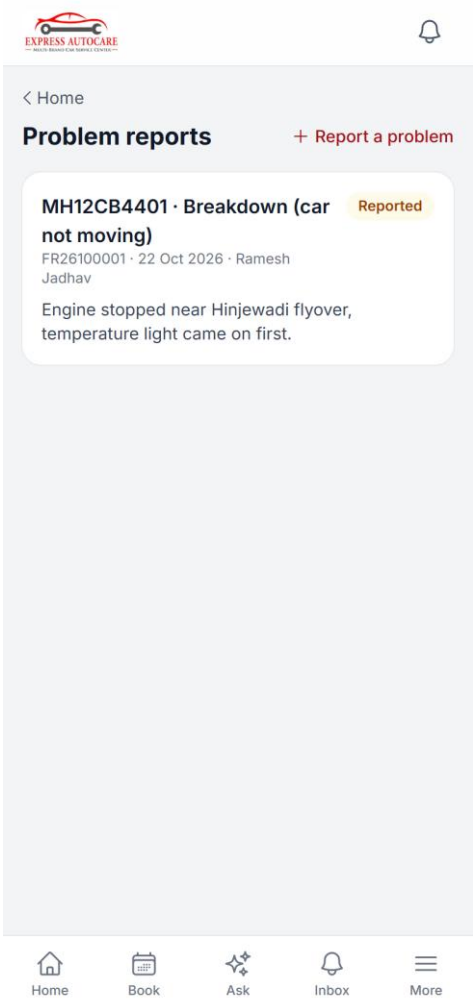

Drivers sign in with **their own mobile number** and a code, or by opening the job link we send them. If their number is also a customer's (their own car), the app asks which to open. A driver sees only the cabs linked to them: their jobs (approve within the limit, pay by UPI), bookings, the cab's documents, **Report a problem** and **Log km**. No wallet, no adding cars.

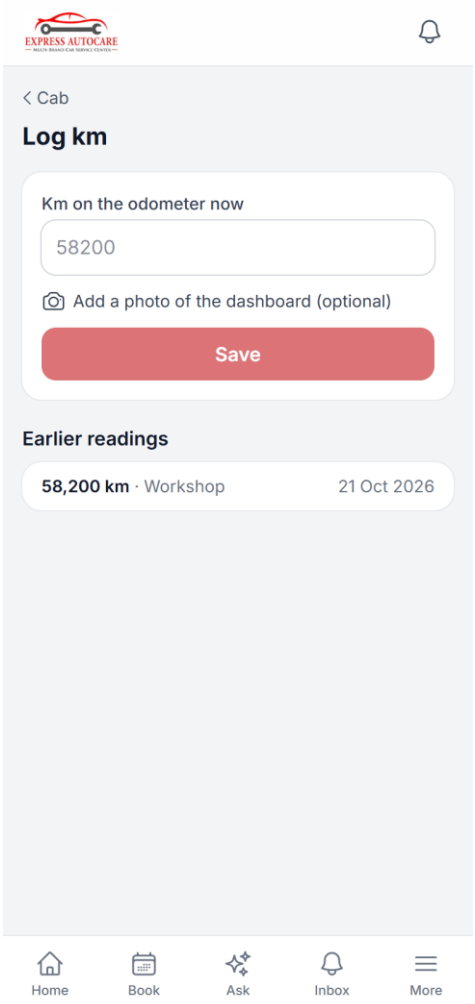

Driver: their cabs only

Report a problem: kind, details, photos, km, location

Problem reports and what the workshop did

Log km (with a dashboard photo if you like)

14.7 Km and service reminders

Drivers and the owner log the km; job cards add theirs. The next-service date uses the latest reading. When a cab is within the warning distance of its next service (500 km by default, in Settings › App Address & Customer App), the owner and the cab's drivers get a reminder once.

> **Note** Fleets are ordinary customers for billing: each job is paid before the gate pass, as for everyone else.

15. How it all connects: one car's journey

This is how one customer moves through the whole system, and who does what at each step.

Step	What happens	Who	Module
1	An ad, a call or a referral brings a **lead**. It is given to an executive.	System / marketing	CRM
2	The executive calls, **sends prices** and follows up. Automatic messages keep in touch.	Marketing	CRM
3	The customer books a slot (from the link or the customer app).	Marketing / customer	CRM
4	The car arrives (or the driver picks it up). The **job card** opens already filled in.	Advisor / driver	Bookings, Workshop
5	Intake photos and trial drive. **Estimate** sent; the customer approves on WhatsApp.	Advisor	Workshop
6	Technicians work through the **job sheet**; parts are priced, ordered and received.	Technician, parts coordinator	Workshop, Parts
7	Trial drive, wash and **final QC**.	Advisor, manager	Workshop
8	**Bill** made and approved; **payments** taken (maybe by staff); tax invoice.	Back office / advisor	Billing
9	Paid in full (at the counter, or by UPI in the customer app, confirmed by back office) → gate pass → Vehicle out (or drop by the driver).	Advisor / driver	Billing, Trips
10	The sale, GST, payments and parts cost are **posted to the accounts**.	System	Accounts
11	The lead is **won** with the bill amount; thank-you, rating and referral link go out.	System	CRM
12	Before the next service is due, **reminders** start again from step 2.	System	CRM
13	At month end, attendance, overtime and incentives (including converted leads) go into **payroll**.	Back office, owner	People

16. Daily checklists

A short list for each role. Print the one for your role and keep it near you.

Role	Every day
Everyone	Punch in with a selfie when you arrive · check **My Day** and the bell · punch out when you leave.
Marketing executive	Call every new lead within 15 minutes · work through **Follow-ups due** · log every call · send everything in **Messages to send** · confirm online bookings.
Service advisor	Check today's **Bookings** · mark cars arrived · intake photos · send estimates · forward parts to the parts desk · trial drive and wash · deliver ready cars · send pending messages. · read out app sign-in codes when customers ask · call "Booked online" bookings to confirm
Technician	Open **My Jobs** · complete each activity with its photos · report additional issues with photos · fit parts only after they arrive · submit the job sheet.
Driver	Open **My Trips** · start, arrive, photos, collected / delivered · hand over any customer money at the counter. · keep location sharing on while punched in (use the EA Workshop Android app)
Parts coordinator	Open the **Parts Desk** · price new requests · order approved parts · mark parts received (or GRN).
Back office	Make and approve bills · record payments · convert to tax invoices · record expenses · collect money held by staff. · confirm UPI payments from the customer app (Billing › UPI Payments to Confirm)
Manager	Approve leave · correct attendance · final QC · check overdue follow-ups and unhappy feedback · watch jobs that are late. · Live Staff Map: anyone with "No signal"?
Owner	Dashboard: jobs in progress, daily collection, billing, outstanding · CRM insights weekly · finalise payroll monthly · lock finished months. · Live Staff Map · AI assistant cost (Settings)

17. Common questions

I cannot see a menu that a colleague has.

Menus depend on your role. If you need it for your work, ask the owner or manager to change your role in Settings › Users. A module may also be switched off.

The punch button says I am too far from the workshop.

Turn on Location, go inside the workshop and wait a few seconds for the GPS to settle, then try again. If it still fails, ask your manager to add the punch.

I punched in but forgot to punch out.

Tell your manager. They will add the punch-out time with a reason in the Attendance Register.

WhatsApp does not open when I tap Send on WhatsApp.

On a phone, WhatsApp must be installed. On a computer, sign in to WhatsApp Web first in the same browser.

The customer says the link has expired.

Send a new one: on the lead, use Send prices or Book again; for an estimate, send it again from the job card.

The same customer came in again as a new lead.

The system joins it to the open lead by itself. If the old lead was closed, the new lead is linked to the existing customer so you can see their history.

The job card does not move to the next stage.

Read the **Next Step** box on the job card. It says exactly what it is waiting for (for example a job sheet not yet submitted, or parts not yet received).

I cannot make the bill.

Final QC must be done first. If Purchases is on, every part must be received on a GRN.

The gate pass was not issued.

The bill is not fully paid. Take the balance, or ask the owner / manager for a gate pass with a reason.

My salary shows days without pay.

Check your attendance month for red (absent) days and your leave balance. If a punch is missing, ask your manager to correct it before the owner finalises the payroll.

The green "Sharing your location" line is red.

Location is off or blocked. Turn on Location (GPS); in the browser allow location for the site; in the Android app allow Location and set Battery to Unrestricted. Then open the app again.

My location stops when the phone is locked.

In the browser location is sent only while the app is open. Install the EA Workshop Android app (7.3).

A customer did not get a sign-in code.

While Interakt is off, codes are not sent: read it out from the Customer app card on their page (13.2). Or send them their job link on WhatsApp: opening it signs them in.

A customer says they paid by UPI but it shows "Being checked".

Back office has not confirmed it yet. Check Billing › UPI Payments to Confirm (9.5).

The assistant says it is resting or not available.

The monthly budget is used up, or it is switched off. The owner checks Settings › AI Assistant (12.7).

A WhatsApp message stayed in Messages to Send although Interakt is on.

That message kind has no approved template yet, or Interakt refused it: the reason shows on the message. Send it by tapping as before, and add the template in Settings › CRM › WhatsApp & Interakt › Templates & buttons (12.6).

Customers' WhatsApp messages do not come into the inbox.

Interakt sends customers' messages only on its higher plans. The owner checks "What Interakt has sent us" in WhatsApp & Interakt › Connection (12.6): if "message_received" never appears, ask Interakt to enable incoming-message webhooks on the plan.

I cannot type a reply: the box only offers templates.

More than 24 hours have passed since the customer's last message (WhatsApp's rule). Send a template such as Chat opener, or call them; their reply opens the chat again (4.7).

A driver cannot approve an item.

It is above the driver's limit for the job, or the fleet owner has already decided it. The rest has been sent to the owner (14.2).

A driver cannot sign in.

Check that they are on the fleet's Fleet card, switched on, with the right mobile number, and that the customer is ticked as a cab fleet (14.1). Read out the code from the customer's Customer app card.

> **Note** Need more help? Speak to your branch manager. For changes to plans, prices, messages or rules, ask the owner: they are all in Settings.
